cedures were applied. The results of the analysis for total mercury content vary cosiderably from less than 0.003 ng/9 to high of 0.419 ng/g with a considerable number of the sample going above the 0.100 ng/g level. Sediment samples also gave similar results, from a low of 0.004 ng/g to value higher than 2 ng/g round the jetty. It can be concluded, therefore, that the area surveyed is contaminated with mercury but not severely so.

18749 **(PAEC(C)IE—80006) Investigation of levels of organic pollutants in selected areas in the Philippines.** Cunanan, S.A.; Santos, F.L.; Solomero, S.S.; Diaz, A. (Philippine Atomic Energy Commission, Diliman, Quezon City). 1980. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE82703249.

Final report of NEPC-PAEC-NPCC Cooperative Project.

Water and sediment samples from the Metro Manila, Camarines Sur and Iligan City were collected and analyzed for polychlorinated biphenyls (PCBs). Analysis was done by gas chromatography using an electron capture detector. No PCBs was detected in the 74 sediment samples analyzed at a minimum detection level of 40 ppb. Analysis of 44 water samples showed no PCB's at a detection limit of 1 ppb.

18750 **(PB—80-158561) Evaluation of limestone neutralization of acidic Adirondack surface waters.** Bisogni, J.J. Jr. (Cornell Univ., Ithaca, NY (USA). Dept. of Environmental Engineering). 1980. 27p. NTIS.

This research project evaluated the use of limestone in packed-bed reactors to neutralize acidified Adirondack surface waters (particularly streams). The project was composed of two phases; investigation of sediment-water interactions and evaluation of the kinetics of limestone packed-bed-reactor neutralization. Experimental results demonstrated that there is little sediment water interaction with regard to hydrogen ion in the Adirondack lakes and streams studied. The results also demonstrated that neutralization of acidified Adirondack surface water by limestone packed-bed reactors is feasible. A preliminary design procedure is presented to show this feasibility.

18751 **(PB—82-204900) Protection of ground water resources from the effects of accidental spills of hydrocarbons and other hazardous substances (guidance document). Technical report.** Yang, J.T.; Bye, W.E. (Environmental Protection Agency, Washington, DC (USA). Office of Drinking Water). Jul 1979. 166p. (EPA—570/9-79-017). NTIS, PC A08/MF A01.

The purpose of this study is to prepare guidelines and technical documents that can be utilized by industry, Federal, State, and local governmental agencies to assist in eliminating or minimizing the effects of spills of contaminants that might adversely affect underground water which supplies, or can reasonably be expected to supply, any public water system. Finally, this report and guidance fulfill that mandate contained in the Safe Drinking Water Act.

18752 **(PB—82-224809) Automated biomonitoring applications in remote water quality surveillance and time rated toxicological assay.** Morgan, E.L.; Eagleson, K.W. (Tennessee Univ., Knoxville (USA). Water Resources Research Center). Apr 1981. 65p. NTIS, PC A04/MF A01.

Applications of remote water quality platforms at key locations in selected drainages are becoming increasingly important for water quality assessment. Testing was made of remote site-specific biosensing units for real-time water quality monitoring from cold water streams in the Great Smoky Mountains National Park to a warm water site on the Tennessee Cumberland River. The designed sensors monitored fish respiratory responses. The sensors were interfaced to existing water quality monitoring stations equipped with remote microprocessor-controlled data collection platforms. Biological responses and physical parameters were transmitted from the stations to over-passing earth satellites which retransmitted the data to a central data collection and processing center.

18753 **(PB—82-231317) Apparatus and procedure for determining oil droplet size distribution. Final report jun 78-nov 80.** Meyer, R.A.; Kirsch, M.; Howard, F.; Freestone, F. (Rockwell International Corp., Newbury Park, CA (USA)). Mar 1982. 108p. NTIS, PC A06/MF A01.

This program was initiated to develop a method and apparatus for determining the oil drop size distribution in flowing oily brine during brine cleanup treatment. An automated photomicrographic apparatus for taking time-lapse photographs of oily brine that was briefly at rest is described. This apparatus meets all N.E.C. Class 1, Division 1, Group D requirements for operation where explosive concentrations of hydrocarbons are known to exist. The system demonstrates its ability to determine the size and number distribution of 2- to 100-micrometer spherical entities, and it establishes their density as well. Thus the technique can differentiate between oil drops, oil-covered gas bubbles, and oil-covered sand or other solids. The report presents both the techniques for reducing the photomicrographs to size and number data, and the Fortran programs involved. Although developed for oil particles in brine on offshore production platforms (where the device has obtained some 20,000 photos for the parent study), the apparatus and technique are equally well suited for characterizing the distribution of any immiscible minor component in a semi-transparent fluid matrix.

18754 **(PB—82-236985) Components identified in energy-related wastes and effluents. Final report Nov 76-Nov 79.** Gebhart, J.E.; McKown, M.M. (Gulf South Research Inst., New Orleans, LA (USA)). May 1982. 734p. NTIS, PC A99/MF A01.

A state-of-the-art review of the characterization of solid wastes and aqueous effluents generated by energy-related processes was conducted. The reliability of these data was evaluated according to preselected criteria or sample source, sampling and analytical methodology, and data source. Data on the following activities were included: coal strip mining, oil refineries, oil shale operations, coal-fired power plants, coal liquefaction processes, coal gasification processes, and geothermal energy production. Using the information collected during this review, areas of inadequate data were identified and sampling sites were selected. Sites were selected to include at least one plant in each of seven energy-related activities. Energy research sites in the Western Energy Resource Development sector were considered as prime sites. Samples were collected from 49 sites. Samples were prepared by using the necessary sample-preparation, clean-up, and preconcentration procedures. Purgeable (volatile) and extractable (semi-volatile) organic components were identified and quantified by gas chromatography/mass spectrometry/data system techniques. Samples were analyzed for mercury by using flameless atomic absorption spectrophotometric procedures, while approximately 70 other elements were determined by spark source mass spectrometry.

18755 **(PB—82-238411) Vienna fly ash disposal site: problem definition study. Final report.** (Environmental Resources Management, Inc., West Chester, PA (USA)). 7 Jun 1982. 137p. NTIS, PC A07/MF A01.

This study had the following objectives: (1) to determine if fly ash-derived contaminants have affected surface and groundwater quality in the surficial aquifer at the Vienna site; (2) to determine if the aquatic and terrestrial biota populating the disposal site and the surrounding area have been affected by fly ash-derived contaminants; and (3) to assess the implications of the above-mentioned effects on the health of the surrounding human population. Ash samples for this study were analyzed by two methods: (1) acid digestion for total element content; and (2) leached according to the U.S. EPA EP Toxicity determination procedures. Field reconnaissance, fall season sampling, groundwater and laboratory analyses were conducted. Conclusions of this problem definition phase of the study include: (1) the fly ash deposit contains As, Cr, and Se; (2) the shallow groundwater system shows local contamination by sulfates, and some detectable heavy metals slightly above PDWS; (3) local contamination in the shallow groundwater system at the site has no significant effect on surface water quality leaving the site; (4) the fly ash now constitutes no significant threat to groundwater quality; (5) biological organisms sampled at the disposal site may be affected by localized sources of trace metal contamination.

16756 (PB—82-243684) A conceptual model of primary productivity in shallow streams using biomass simulation. Technical completion report. Elliott, J.C.; McDonnell, A.J. (Pennsylvania State Univ., University Park (USA). Inst. for Research on Land and Water Resources). Jun 1982. 140p. NTIS, PC A07/MF A01.

A conceptual model for primary productivity was developed for application to rooted aquatic macrophytes in streams to assist studies of eutrophication and control of water quality in supplementing outputs of dissolved oxygen (DO) models of pollution loads. This model included a first-order differential equation of biomass, with specific rates for photosynthesis, respiration, and death. A model component was developed to describe available light spatially/temporally in the weed bed, as reduced from extraterrestrial solar radiation. A DO model component included terms for photosynthetic production, plant respiration, and a benthal sink due to dead plant matter decay. The latter, a first-order exponential oxygen sink, had not been previously included in DO models.

16757 (PB—82-244336) Assessment of water quality conditions Ohio River main stem 1980-81. (Ohio River Valley Water Sanitation Commission, Cincinnati (USA)). 1981. 110p. NTIS, PC A06/MF A01.

This report, prepared by the Ohio River Valley Water Sanitation Commission (ORSANCO), is an assessment of the water quality of the Ohio River and lower reaches of its major tributaries together with information on Commission water pollution control programs for the years 1980 and 1981. The Commission is an interstate agency formed in 1948 by eight states signatory to a compact to abate existing and control future water pollution in the Ohio River Valley.

16758 (PB—82-244344) The IXTOC I oil spill: the Federal Scientific Response. Special report. Hooper, C.H. (National Oceanic and Atmospheric Administration, Boulder, CO (USA). Office of Marine Pollution Assessment). Dec 1981. 208p. NTIS, PC A10/MF A01.

On 3 June 1979, a Petroleos Mexicanos (PEMEX) exploratory well, IXTOC I, blew out in the Bay of Campeche, about 80 km northwest of Ciudad del Carmen, Mexico. The spill, not brought under control until 27 March 1980, became the largest oil spill in history. The following summary described the numerous operation support activities and scientific studies performed under the purview of the Federal Scientific Support Coordinator. The primary purpose of the physical, chemical, and biological activities described herein was to provide the Federal On-Scene Coordinator (OSC) with timely information concerning the location, toxicity, and potential ecological impact of the oil on the Texas coastline.

16759 (PB—82-248808) Organic micropollutants in drinking water. Technical report. Fielding, M.; Gibson, T.M.; James, H.A.; McLoughlin, K.; Steel, C.P. (Water Research Centre, Stevenage (UK)). [nd]. 49p. NTIS PC E04/MF E04.

This report relates to work carried out in order to identify organic contaminants in raw and treated water. A further objective was to determine the frequency of occurrence of such contaminants in a variety of treated waters, and to make a preliminary assessment of their significance to health.

16760 (PB—82-248816) A review of photo-oxidation for the determination of total organic carbon in water. Technical report. Oake, R.J. (Water Research Centre, Stevenage (UK)). [nd]. 22p. NTIS PC E03/MF E03.

The purpose of this review is to gather information relating to photochemical oxidation of organic compounds in water, with particular emphasis on the analytical applications. The review provides a brief outline of the principles of photochemical oxidation, data on the analytical applications of the technique, and information, not directly related to analysis on the ability of ultra-violet light to oxidise specific organic compounds in water.

16761 (PB—82-250663) Processes affecting the distribution of low-molecular-weight aliphatic hydrocarbons in Cook Inlet, Alaska. Technical memo. Katz, C.N.; Cline, J.D. (National Oceanic and Atmospheric Administration, Seattle, WA (USA). Pacific Marine Environmental Lab.). Apr 1981. 94p. NTIS, PC A05/MF A01.

Measurements of low-molecular-weight (LMW) aliphatic hydrocarbons, C1 to C4, were made in Cook Inlet, Alaska, on five cruises between 1977 and 1979. The distributions of these compounds were variable in both space and time. Concentration levels and composition of these gases in the lower Inlet appeared to be typical of those found in other coastal marine environments. The upper Inlet, however, had significantly elevated concentrations of methane and the C2+ paraffins. On the basis of the contrasting hydrographic conditions of the two regions and the differing compositional characteristics of the hydrocarbon assemblages, the source of hydrocarbons was qualitatively determined to be predominately biogenic in the lower Inlet and thermogenic in the upper Inlet. Hydrocarbon analyses made in concert with biological measurements in the lower Inlet suggested that the major source of methane was from the sediments, whereas the C2+ hydrocarbons were produced in the water column. A methane budget calculated on the basis of a two-box model of the Inlet showed air-sea exchange and tidal mixing to be the major sinks of hydrocarbons in the Inlet. The budget quantitatively supported the evidence of a thermogenic source of hydrocarbons in the upper Inlet. This source may be the result of submarine seepage or leakage from existing wells.

16762 (PB—82-257247) Field study to obtain trace element mass balances at Kingston Steam Plant. Final report Mar 77-Jun 81. Zielke, R.L.; Bittman, R.M. (Tennessee Valley Authority, Chattanooga (USA). Div. of Energy Demonstrations and Technology). May 1982. 180p. NTIS, PC A09/MF A01.

The report gives results of a study to help characterize the various waste streams by identifying the mass flow rates of the minor and trace elements in each waste stream of a coal-fired utility boiler. In obtaining the mass balances for 28 elements, the inlet and outlet flows associated with three major pieces of equipment were used: the pulverizer, boiler, and electrostatic precipitator (ESP); Kingston Unit 6 has two ESPs. Thus, the mass balance presented reflected a good picture of Unit 6 at near-full-load operation. The mass imbalance for the entire system ranged from -12.5 to +6.3%. However, the mass imbalance for each element was quite different: in many cases, it greatly exceeded + or -12.5%. Nevertheless, 10 elements--Al, Be, Ca, Cr, Fe, Mg, S, Si, Ti, and V--had imbalances of < + or -10%; these elements represented about 93% of the total fly ash and bottom ash mass flow rates. Improved sampling for elements in the vapor phase is needed because most concentrations were below detection limits. Improved sampling for both the bottom ash and inlet to the mechanical collector would drastically improve the mass flow rate estimates and remove some of the assumptions of this report.

16763 (PB—83-111310) Characteristics and applications of Big Sandy River, Glenwood Springs, and Dotsero Springs waters in energy development. Eisenhauer, R.J. (Bureau of Reclamation, Denver, CO (USA). Engineering and Research Center). Jul 1982. 30p. NTIS, PC A03/MF A01.

The Bureau of Reclamation is conducting studies to find methods for preventing high salinity point source waters from entering the Colorado River. There are three point sources that contribute a combined salt load of 344 700 metric tons per year. Big Sandy River contributes 117 900 metric tons per year, Glenwood Springs contribute 163 300 metric tons per year, and Dotsero Springs contribute 63 500 metric tons per year. Water analyses of the three saline point sources were made and the water was used in simulating coal slurry transport by pipeline. This study has confirmed some aspects of the proposed methods for disposal of these waters (deep well injection or by use in energy development).

16764 (PB—83-114025) Ecological monitoring of aqueous effluents from petroleum refineries. Payne, F.G.; Girton, C.; de Ligny, W.; De Roocker, A.; Sirvins, A. (Concawe, The Hague (Netherlands)). [nd]. 65p. NTIS, PC A04/MF A01.

The report provides information which will allow the management of inland and coastal refineries to evaluate the need for appropriate ecological monitoring programs to study the effect of aqueous discharges on the environment into which they are discharged. The stages in the development of a monitoring program are reviewed and a description is given of some benefits that may arise from properly conducted studies. Other sections outline procedures for sampling, collection and analysis of data and describe several case histories at refinery sites in a variety of natural habitats. The report illustrates the practical contribution that a ecological monitoring program can make to overall refinery management. (Copyright (c) CONCAWE, 1982.)

18765 (RFP-Trans—390) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-53154 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83007001.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste water discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water with agitation. The treatment agents of this invention contain a magnetic ferrite powder which is a mixture of $BaO.nFe_2O_4$ (n = 4.6 to 6.5) and $SrO.mFe_2O_4$ (m = 4.6 to 6.5) and which has a particle size of 0.5 to 50 microns.

18766 (RFP-Trans—380) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-55658 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83006824.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste water discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water with agitation. The agents of this invention contain an Ni-Cu-Zn ferrite powder with a particle size of 0.5 to 50 microns.

18767 (RFP-Trans—386) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-60887 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83006987.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste water discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water with agitation. The agents of this invention contain an Mn-Zn ferrite powder with a particle size of 0.5 to 50 microns.

18768 (RFP-Trans—385) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-60886 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83006986.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water in an appropriate quantity to the oil-polluted waste water with agitation. The treatment agents of this invention contain an Ni-Zn ferrite powder with a particle size of 0.5 to 50 microns.

18769 (RFP-Trans—381) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-55659 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83006825.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste water discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water with agitation. The agents of this invention contain a Fe_3O_4 ferrite powder with a particle size of 0.5 to 50 microns.

18770 (RFP-Trans—388) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-53153 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83007000.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste water discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water with agitation. The treatment agents contains a magnetic ferrite powder ($BaO.nFe_2O_4$) (n = 4.6 to 6.5) with a particle size of 0.5 to 50 microns.

18771 (RFP-Trans—387) Treatment agents for separation of oil and water. Tanaka, S.; Suda, N. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Japanese Kokai Patent Publication No. Sho 53-55660 (1978). 4p. NTIS, PC A02/MF A01. Order Number DE83006999.

This invention concerns treatment agents for separation of oil and water in oil-polluted water, such as the waste water discharged from service stations. The treatment agents adsorb the oil content present in waste water when they are added in an appropriate quantity to the oil-polluted waste water with agitation. The agents of this invention contain a Cu-Zn-Mg ferrite powder with a particle size of 0.5 to 50 microns.

REFER ALSO TO CITATION(S) 17315, 17321, 17375, 17382, 17383, 17384, 17385, 17388, 17392, 17430, 17434, 17446, 18693, 18696, 18697, 18718, 18729, 18743, 18865, 18870, 19021, 19022, 19023

18772 (CEA-BIB—235) Bibliographical review of radioactive cesium uptake capacity and processes in aquatic plants. Pally, Monique; Foulquier, Luc. (CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)). Nov 1981. 306p. (In French). NTIS (US Sales Only), PC A14/MF A01. Order Number DE82703287.

Both freshwater and marine plants are included in this survey covering 217 reports published between 1954 and 1979. These articles involve the radiocesium abundance found in areas either directly or indirectly affected by liquid waste releases. They specify the concentration factors determined from field measurements and laboratory works. Other areas covered include contamination kinetics, radiocesium distribution in higher plants, effects of biological and environmental factors. Radiocesium uptake potential is higher in freshwater algae and plants than in marine algae. Radiocesium adsorption phenomena seem to predominate in algae over absorption, while in the higher freshwater plants absorption is the primary phenomena. In areas not directly affected by liquid wastes, plant activity levels increased until they reached 10000 pCi/kg wet weight in 1965, and reduced thereafter. In areas directly affected by waste discharges, the activity levels range from 10 to 16000 pCi/kg wet weight in seawater, and from practically zero to 230000 pCi/kg in fresh water. This variability also affects the concentration factors. In most cases, the values measured in marine algae range from 10 to 100; the highest radiocesium uptake is found in brown algae and red algae. The concentration factors measured in freshwater mosses and algae are most often around 4000, while

they are about 2000 in submerged, floating and emergent plants. Some plants, specially mosses and algae, proved to be better bioindicators than others. The biological half-lives range from 2 to 21 days in marine algae, and from 1 to 65 days in freshwater plants. This survey underscores the necessity of allowing for the ecological characteristics of each site when evaluating the impact of nuclear plants.

16773 (NUREG/CR—3076) Computer prediction of subsurface radionuclide transport: an adaptive numerical method. Neuman, S.P. (Arizona Univ., Tucson (USA). Dept. of Hydrology and Water Resources). Jan 1983. 44p. NTIS, PC A03/MF A01 - GPO $4.75. Order Number DE83901349.

Radionuclide transport in the subsurface is often modeled with the aid of the advection-dispersion equation. A review of existing computer methods for the solution of this equation shows that there is need for improvement. To answer this need, a new adaptive numerical method is proposed based on an Eulerian-Lagrangian formulation. The method is based on a decomposition of the concentration field into two parts, one advective and one dispersive, in a rigorous manner that does not leave room for ambiguity. The advective component of steep concentration fronts is tracked forward with the aid of moving particles clustered around each front. Away from such fronts the advection problem is handled by an efficient modified method of characteristics called single-step reverse particle tracking. When a front dissipates with time, its forward tracking stops automatically and the corresponding cloud of particles is eliminated. The dispersion problem is solved by an unconventional Lagrangian finite element formulation on a fixed grid which involves only symmetric and diagonal matrices. Preliminary tests against analytical solutions of ne- and two-dimensional dispersion in a uniform steady state velocity field suggest that the proposed adaptive method can handle the entire range of Peclet numbers from 0 to ∞, with Courant numbers well in excess of 1.

16774 (SSI-A—82-03) Contents of radon and radium in the water from large water- works in Sweden. Kulich, J. (Statens Straalskyddsinstitut, Stockholm (Sweden)). 2 Apr 1982. 21p. (In Swedish). NTIS (US Sales Only), PC A02/MF A01. Order Number DE82703284.

The investigation covers 172 large water-works in Sweden. The contents of Rn-222 and Ra-226 in water were analysed. The average value weighted for the population was 18.6 Bq for Rn and 10.9 mBq for Ra per liter of water. The highest value of Rn was found at Vimmerby: 150 Bq per liter and the highest value of Ra at Hoer: 49.7 mBq per liter. The radon from household water may be added to other sources of radon by less than 30 Bq per m^3 of air.

16775 (RFP-Trans—392) Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean. Ballestra, S. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). Feb 1983. Contract AC04-76DP03533. Translation of Thesis presented to the University of Nice to obtain the degree of Docteur d'Etat - Sciences, October 17, 1980. 42p. NTIS, PC A03/MF A01; 1. Order Number DE83007049.

Portions are illegible in microfiche products.

Both analytical and in situ measurements are discussed. The analytical part deals with the development of methods for the different radioelements studied, and stresses the quality obtained, particularly by participation in the intercalibration program organized by the International Laboratory of Marine Radioactivity (Monaco Oceanographic Museum) of the International Atomic Energy Agency. Chapter III concerns the different results of measurements on the distribution and behavior of the transuranium elements in the Mediterranean. Recommendations for future research directions are given. (PSB)

16776 Sensitivity analysis of a model for the environmental movement of radionuclides. Helton, J.C.; Iman, R.L. (Sandia National Labs., Albuquerque, NM (USA)). *Health Physics;* 42: No. 5, 565-584(May 1982).

Results are presented from a sensitivity analysis study of the Environmental Transport Model developed to represent the environmental movement of radionuclides. The study has three purposes: (1) to develop sensitivity analysis techniques applicable to the Environmental Transport Model, (2) to provide insight and experience with respect to the performance of a sensitivity analysis of this model and (3) to develop understanding of the overall operation of the model and the variables which influence this operation. Two variations of a hypothetical river receiving a radionuclide discharge containing ^{99}Tc, ^{245}Cm, ^{241}Pu, ^{234}U, ^{230}Th and ^{226}Ra are defined. Independent variables of the following types are introduced: variables which define physical properties of the river system (e.g. soil depth, river discharge and sediment resuspension) and variables which summarize radionuclide properties (i.e. distribution coefficients). For each radionuclide, the following dependent variables are investigated: (1) radionuclide concentration in soil, (2) dissolved radionuclide concentration in surface-water and (3) total radionuclide concentration in surface-water. The investigation employs sensitivity analysis techniques based on Latin hypercube sampling, rank transformations and stepwise regression. Among the important variables indicated in the analysis are distribution coefficients, river discharge and suspended sediment concentration.

16777 Investigation for the evaluation of the impact of nuclear plants discharges in the marine environment, under the environmental and health protection standpoints. Cigna, A. (Comitato Nazionale per l'Energia Nuclear, La Spezia, Italy). pp 199-216 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publisher (1981).

This research program is composed of two projects. The first project describes and characterizes a typical marine coastal ecosystem. Sampling points were located near a nuclear power plant in Italy. Several radionuclides were measured in core samples of sediments and representative aquatic organisms. In the second project laboratory studies were conducted on the behavior of long-lived radionuclides in the marine environment. Uptake of /sup 95m/technetium, ^{99}Tc, and ^{51}Cr by various species of phytoplankton were measured. (RJC)

16778 Marine distribution and behaviour of transuranic and fission product radionuclides. Mitchell, N.T. pp 217-221 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publisher (1981).

This program consists of two projects. The objective of the first project is to determine the environmental impact of disposing of transuranic wastes into coastal waters. The concentrations of several transuranic elements were measured in samples of seawater, sediments, and biological materials collected in the coastal waters of the United Kingdom. The objective of the second project is to determine whether a relationship exists between the concentrations of cesium 137 and cesium 134 in seawater and biota and the rates of discharge from the BNFL fuel reprocessing plant, Windscale, Cumbria. (RJC)

16779 Radioecological investigations of an environmental contamination with transuranic elements. Aarkrog, A. (Risoe National Lab., Roskilde, Denmark). pp 229-232 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publisher (1981).

In January 1968 the marine environment at Thule Air Base, Greenland was contaminated by plutonium and americium. Expeditions in 1968, 1970, 1974, and 1979 have studied this contamination; approximately 1 TBq ^{239,240}Pu (25 to 30 Ci) are present in the marine sediments. In the biota most of the contamination occurs in the benthos. An aim of the 1979 expedition has been to make a study of the time-trend of the environmental plutonium levels, i.e. how rapidly the Pu levels decrease in the biota and in sediments. Furthermore, the vertical and horizontal distributions of the contamination of the sediments have been compared with those of previous years. The higher trophic levels have been reexamined to ascertain whether or not they are still uncontaminated, and for the first time ^{241}Am has been included in the studies.

18780 Plutonium in the Rhine-Meuse-Scheldt delta; analysis of estuarine sediment, salt-marsh soil and vegetation samples. Duursma, E.K. (Delta Inst. for Hydrobiological Research, Yerseke, Netherlands). pp 285-290 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

A research was made to determine ^{238} ^{239} ^{240}Pu concentrations in sediment, particulate matter, salt-marsh plants and lichens from various locations of the Delta area. The objectives were to trace the sources of plutonium for this area, either being fallout, upriver nuclear installations or the reprocessing plant in La hague (transport along the coast).

5204 Thermal Effluents Monitoring And Transport

REFER ALSO TO CITATION(S) 17906, 18743

18781 (INPE—2229-PRE/021) Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data. Stevenson, M.R.; Steffen, C.A.; Villagra, H.M.I. (Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)). Sep 1981. 23p. (In several languages). NTIS, PC A02/MF A01.

The spatial and temporal variations of the sea surface temperature, utilizing data obtained from sea surface, aircraft and satellite platforms were studied. The objective of the study is the evaluation and mapping of small scale variations in the sea surface temperature, caused by the thermal discharge from a nuclear power plant at Angra dos Reis, Brazil. Evaluation of data from ANGRA 01, the first experiment made on December 19, 1980, showed the surface temperature to be quite isothermal. Temperature from the aircraft and satellite radiometers were about 0.6 C and 5.0 C cooler, respectively, than the temperatures measured from the boat. These thermal offsets are readily accounted for by differences in emissivities of the sea surface and the intervening water vapor in the lower atmosphere.

18782 (NP—3900951) Laminar and turbulent propagation phenomena in natural and forced convection. Kueblbeck, K. (Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Maschinenwesen). 13 Mar 1981. 250p. (In German). NTIS (US Sales Only), PC A11/MF A01. Order Number DE83900951.

Thesis.

In this work, the behavior of warm water entering stagnant or flowing waters is investigated numerically and in model experiments. The investigation is restricted to two-dimensional flows which can be separated strictly into boundary layer flows and recirculation flows. For solving the conservation equations, the ADI method (Alternating Direction Implicit Method) is selected for the numerical treatment. First, laminar boundary layer flows are investigated. The further development leads to turbulent flows. Several turbulence models with 0 to 3 transport equations are taken into account. For the computation of recirculating, transient flows a numerical procedure was derived which is especially convenient for the description of slowly developing transient processes and which shows an excellent stability behaviour. After including the most convenient turbulence model, turbulent, two-dimensional, recirculating buoyancy flows can be computed. The model experiments carried out for the support of the theoretical work show good agreement with the computations and with similar experiments of other authors. After computer test runs for model examples, flows occuring in the nature can be approached with high simulation quality.

18783 (PB—82-238569) Verification and transfer of thermal pollution model. Volume I: verification of three-dimensional free-surface model. Final report Mar 78-Sep 80. Lee, S.S.; Sengupta, S.; Tuann, S.Y.; Lee, C.R. (Miami Univ., Coral Gables, FL (USA). Dept. of Mechanical Engineering). May 1982. 125p. NTIS, PC A06/MF A01.

The six-volume report describes the theory of a three-dimensional (3-D) mathematical thermal discharge model and a related one-dimensional (1-D) model, includes model verification at two sites, and provides a separate user's manual for each model. The 3-D model has two forms: free surface and rigid lid. The former, verified at Anclote Anchorage (FL), allows a free air/water interface and is suited for significant surface wave heights compared to mean water depth; e.g., estuaries and coastal regions. The latter, verified at Lake Keowee (SC), is suited for small surface wave heights compared to depth because surface elevation has been removed as a parameter. These models allow computation of time-dependent velocity and temperature fields for given initial conditions and time-varying boundary conditions.

18784 (PB—82-238577) Verification and transfer of thermal pollution model. Volume II: user's manual for three-dimensional free-surface model. Final report Mar 78-Sep 80. Lee, S.S.; Sengupta, S.; Tuann, S.Y.; Lee, C.R. (Miami Univ., Coral Gables, FL (USA). Dept. of Mechanical Engineering). May 1982. 154p. NTIS, PC A08/MF A01.

The six-volume report describes the theory of a three-dimensional (3-D) mathematical thermal discharge model and a related one-dimensional (1-D) model, includes model verification at two sites, and provides a separate user's manual for each model. The 3-D model has two forms: free surface and rigid lid. The former, verified at Anclote Anchorage (FL), allows a free air/water interface and is suited for significant surface wave heights compared to mean water depth; e.g., estuaries and coastal regions. The latter, verified at Lake Keowee (SC), is suited for small surface wave heights compared to depth. These models allow computation of time-dependent velocity and temperature fields for given initial conditions and time-varying boundary conditions.

18785 (PB—82-238585) Verification and transfer of thermal pollution model. Volume III: verification of three-dimensional rigid-lid model. Final report Mar 78-Sep 80. Lee, S.S.; Sengupta, S.; Nwadike, E.V.; Sinha, S.K. (Miami Univ., Coral Gables, FL (USA). Dept. of Mechanical Engineering). May 1982. 104p. NTIS, PC A06/MF A01.

The six-volume report describes the theory of a three-dimensional (3-D) mathematical thermal discharge model and a related one-dimensional (1-D) model, includes model verification at two sites, and provides a separate user's manual for each model. The 3-D model has two forms: free surface and rigid lid. The former, verified at Anclote Anchorage (FL), allows a free air/water interface and is suited for significant surface wave heights compared to mean water depth; e.g., estuaries and coastal regions. The latter, verified at Lake Keowee (SC), is suited for small surface wave heights compared to depth (e.g., natural or man-made inland lakes) because surface elevation has been removed as a parameter. These models allow computation of time-dependent velocity and temperature fields for given initial conditions and time-varying boundary conditions. The free-surface model also provides surface height variations with time.

18786 (PB—82-238601) Verification and transfer of thermal pollution model. Volume V: verification of one-dimensional numerical model. Final report Mar 78-Sep 80. Lee, S.S.; Sengupta, S.; Nwadike, E.V. (Miami Univ., Coral Gables, FL (USA). Dept. of Mechanical Engineering). May 1982. 149p. NTIS, PC A07/MF A01.

The six-volume report describes the theory of a three-dimensional (3-D) mathematical thermal discharge model and a related one-dimensional (1-D) model, includes model verification at two sites, and provides a separate user's manual for each model. The 3-D model has two forms: free surface and rigid lid. The former, verified at Anclote Anchorage (FL), allows a free air/water interface and is suited for significant surface wave heights compared to mean water depth; e.g., estuaries and coastal regions. The latter, verified at Lake Keowee (SC), is suited for small surface wave heights compared to depth (e.g., natural or man-made inland lakes) because surface elevation has been removed as a parameter. These models allow computation of time-dependent velocity and temperature fields for given initial conditions and time-varying boundary conditions.

18787 (PB—82-238619) Verification and transfer of thermal pollution model. Volume VI: user's manual for one-dimensional numerical model. Final report Mar 78-Sep 80. Lee, S.S.; Sengupta, S.; Nwadike, E.V. (Miami Univ., Coral Gables, FL (USA). Dept. of Mechanical Engineering). May 1982. 58p. NTIS, PC A04/MF A01.

The six-volume report describes the theory of a three-dimensional (3-D) mathematical thermal discharge model and a related one-dimensional (1-D) model, includes model verification at two sites, and provides a separate user's manual for each model. The 3-D model has two forms: free surface and rigid lid. The latter, verified at Lake Keowee (SC), is suited for small surface wave heights compared to depth (e.g., natural or man-made inland lakes) because surface elevation has been removed as a parameter.

18788 (PB—83-101915) Estuarine community dynamics in relation to power plant operations: benthic process program. Final report. Boynton, W.R.; Kemp, W.M.; Osborne, C.G.; Spalding, E.; Keefe, C.W. (Horn Point Environmental Lab., Cambridge, MD (USA); Maryland Univ., Solomons (USA). Center for Environmental and Estuarine Studies). Aug 1982. 67p. NTIS, PC A04/MF A01.

The report presents results of in-situ studies of major carbon, nitrogen, phosphorus and sediment rate processes such as sedimentation, resuspension, benthic fluxes of nutrients and organic matter and water column metabolism. Sediment/water budgets of nitrogen, phosphorus and carbon in 3 distinctive areas of the estuary including an area in the immediate vicinity of a power plant, are presented. The report includes an evaluation of power plant induced perturbations. At primary locations, estimates were made of water column metabolism, benthic respiration, benthic nutrient fluxes, water quality characteristics of the sediments and overlying waters, light extinction and sedimentation and resuspension rates of particulate materials.

18789 Effects of thermal pollution of a nuclear power plant on aquatic organisms (macroinvertebrates and fishes of the River Meuse. Micha, J.C.; Detollenaere, A. (Facultes Universitaires Notre-Dame de la Paix, Namur, Belgium). pp 281-284 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The object of this research was to determine the thermal impact of a nuclear power plant (PWR type) Tihange I (872 MWe) on macroinvertebrates and fish living in the river Meuse.

5205 Site Resource And Use Studies

REFER ALSO TO CITATION(S) 17374, 17375, 17378, 17379, 17381, 17382, 17383, 17384, 17385, 17386, 17387, 17529, 18014, 18738

18790 (AD-A—114591/1) Lake Erie water level study. Appendix G. Recreational beaches and boating. Final report. (International Lake Erie Regulation Study Board (USA)). Jul 1981. 266p. NTIS PC MF A01.

The Recreational Beaches and Boating Appendix describes the effects of limited regulation of Lake Erie on recreational beaches and boating in the lower Great Lakes-St. Lawrence River system. This evaluation was limited to Lakes Erie and Ontario and part of the St. Lawrence River where the impact was expected to be greatest and due to time and funding constraints. Also, due to these constraints, the study of the effects on recreational boating was confined only to United States waters. Limited regulation of Lake Erie would have the effect of lowering the water level of that lake and those upstream. As a result, there would be losses to recreational boating, with the losses dependent upon the amount of lowering. At the same time, recreational beaches would benefit due to increases in beach area.

18791 (CONF-821118—1) Tropical organic soils ecosystems in relation to regional water resources in southeast Asia. Armentano, T.V. (Butler Univ., Indianapolis, IN (USA). Holcomb Research Inst.). 1982. Contract AC02-81EV10725. 18p. NTIS, PC A02/MF A01. Order Number DE83000994.

From Workshop on limnology and water resources management in developing countries of Asia and the Pacific; Kuala Lumpur, Malaysia (29 Nov 1982).

Tropical organic soils have functioned as natural sinks for carbon, nitrogen, sulfur and other nutrients for the past 4000 years or more. Topographic evolution in peat swamp forests towards greater oligotrophy has concentrated storage of the limited nutrient stock in surface soils and biota. Tropical peat systems thus share common ecosystem characteristics with northern peat bogs and certain tropical oligotrophic forests. Organic matter accumulation and high cation-exchange-capacity limit nutrient exports from undisturbed organic soils, although nutrient retention declines with increasing eutrophy and wetland productivity. Peat swamps are subject to irreversible degradation if severely altered because disturbance of vegetation, surface peats and detritus can disrupt nuttrient cycles and reduce forest recovery capacity. Drainage also greatly increases exports of nitrogen, phosphorus and other nutrients and leads to downstream eutrophication and water quality degradation. Regional planning for clean water supplies must recognize the benefits provided by natural peatlands in balancing water supplies and regulating water chemistry.

18792 (PB—82-240284) Impact of a once through cooling system on the yellow perch stock in the western basin of lake erie. Jensen, A.L.; Hamilton, T.A. (Michigan Univ., Ann Arbor (USA). School of Natural Resources). Jul 1982. 78p. NTIS, PC A05/MF A01.

Conventional stock assessment models have been applied to determine the impact of entrainment and impingement at the Monroe Power Plant on the yellow perch stock of the western basin of Lake Erie. First the surplus production model was applied. Biological parameters of the model were estimated from commercial catch and effort data, and entrainment and impingement coefficients were estimated from power plant data. The model was used to estimate stock biomass, egg production, and larvae production; the proportions entrained and impinged were then estimated. The impact of water withdrawal on the equilibrium standing stock and maximum sustainable yield from the fishery were estimated and the impacts of increased water withdrawal were simulated. An analytical model was also applied. Parameters of the analytical model were estimated using power plant data, biological data available in the literature, and commercial catch data. The model was used to estimate the age structure and biomass of the perch stock and to estimate the impact of the power plant on abundance of the impingeable stock and biomass of the exploited stock.

18793 (PB—83-114611) Correlations of estimated pumpage from the Ogallala Aquifer with modeled crop water requirements in the Texas High Plains. Final report. McFarland, M.J.; Heilman, J.L.; McCann, I. (Texas A and M Univ., College Station (USA). Remote Sensing Center). Aug 1982. 40p. NTIS, PC A03/MF A01.

The water requirements of the major crops in the 40 counties of the Texas High Plains overlying the Ogallala Aquifer were determined with the Blaney-Criddle model for 1979 and 1980. Input data for the model consisted of monthly temperatures and precipitation from climatological records and irrigated crop acreages by crop for each county. These modelled irrigation water requirements, after effective rainfall was taken into account, showed a high positive correlation with estimates of irrigated acreage and amount of water applied for each county for 1979 and 1980.

53 ENVIRONMENTAL-SOCIAL ASPECTS OF ENERGY TECHNOLOGIES

18794 Global risks from energy consumption. von Hippel, F. (Princeton Univ., NJ). pp 209-227 of Health risks of energy technologies. Travis, C.C.; Etnier, E.L. (eds.). Boulder, CO; Westview Press, Inc. (1983).

From American Association for the Advancement of Science symposium; Toronto, Ontario, Canada (8 Jan 1981).

A discussion of some of the global risks associated with current and frequently proposed future levels of consumption of energy from oil, coal, fission, fusion, and renewable sources points out the the dangers are serious and relatively near term. These include world war over Persian Gulf oil, climate change due to the buildup of atmospheric carbon dioxide, the accelerated proliferation of nuclear weapons, and competition between food and energy for land and water. The author urges placing a greater emphasis on how we use energy and how to reduce energy waste. At the levels of consumption which economically justified levels of energy efficiency could bring about, enough flexibility could develop in our choice of a future energy-supply mix to dramatically reduce the associated global risks. 47 references, 3 figures.

18795 (ITA—82-08-514) Survey on pollution control in Germany. Foreign market survey report. Kindel, K. (Kindel (K.W.), Berlin (Germany, F.R.)). Mar 1982. 127p. NTIS PC $15.00/MF A01.

The market research was undertaken to study the present and potential US share of the market in West Germany for pollution control equipment; to examine growth trends in West German end-user industries over the next few years; to identify specific product categories that offer the most promising export potential for US companies; and to provide basic data which will assist US suppliers in determining current and potential sales and marketing opportunities. The trade promotional and marketing techniques which are likely to succeed in West Germany were also reviewed.

18796 (NP—3901061) Environmental protection and sectoral structural changes. Sprenger, R.U.; Britschkat, G.; Hild, R. (Ifo-Institut fuer Wirtschaftsforschung, Muenchen (Germany, F.R.)). 1981. 147p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE83901061.

The focal point of the study is the discussion about the conceptional and statistical possibilities and difficulties in registering empirically the sectoral structural effects induced by environmental protection. The following conclusions are drawn in the paper: The impression may arise that the influence of environmental politics in the 70 s prevented the fundamental sectoral structural changes. On the contrary, certain sectoral structural adaptations, that would have occured anyway just because of other factors of influence within the framework of an overall structural change in a dynamic economy, have been and are still accelerated and increased by changed conditions of environmental politics. Up to the present nothing suggests great losses in the production of any economic trade or branch because of the influence of environmental politics. Because of the mostly additional demand for environmental protection goods in the 70 s it can be supposed that the sectoral output structure has changed infavour of those industrial branches that are active in the environmental protection market.

18797 (PB—82-208372) Incentives for technological innovation in air pollution reduction: an ETIP policy research series. volume 9: internal offsets and technological innovation: six case studies. Mogee, M.E. (National Bureau of Standards, Washington, DC (USA). Experimental Technology Incentives Program). Apr 1982. 73p. (NBSIR—82-2475). NTIS, PC A04/MF A01.

This report describes the experiences of six industrial firms with the new Federal policy of internal offsets. Offsets are part of a group of regulatory reforms initiated by the Environmental Protection Agency and called by the generic title of 'emission trading'. Offsets were introduced to allow continued economic growth in nonattainment areas and to stimulate innovation in pollution control and process technology by making it profitable for firms to create more reductions than the law now requires. The report discusses the problems of defining and measuring innovation as well as presenting industrial firm perceptions of innovation associated with offset cases.

18798 (PB—82-213877) The dynamic aggregate time series relationship between energy consumption and economic activity in industrialized countries. Beenstock, M.; Willcocks, P. (London Business School (UK). Econometric Forecasting Unit). Nov 1980. 22p. NTIS, PC AE02/MF E02.

The study measures the aggregate relationship between energy consumption and the level of economic activity in the industrialized countries as a whole. An economic model is presented which distinguishes short/long term price and income elasticities in a systematic fashion.

18799 (PB—82-224254) Settlements and energy: economic and community development throughout the world in the 1980's. Final report. Widner, R.R.; Moore, J.L. (Academy for Contemporary Problems, Washington, DC (USA)). Jun 1981. 85p. NTIS, PC A05/MF A01.

This report contains two of eight working papers which were presented at World Congress of Local Governments meeting in 1981. The Settlement paper describes the long term problems in the rapidly growing developing countries with providing shelter and basic services in conformity with the standards of industrialized countries. The Energy paper describes how local authorities can manage resources and conservation measures.

18800 (PB—82-224437) Spatial dimensions of supply economics with energy as an object case. Final report. Burggraf, S. (Economic Development Administration, Washington, DC (USA). Research and Evaluation Div.). Sep 1981. 33p. NTIS, PC A03/MF A01.

The purpose of this paper is to explore the spatial economic efficiency implications of supply adjustments anticipated for the 1980's with the goal of developing some tools and concepts for applying cost-benefit analysis to national regional policy. The question to be answered is the extent to which supply problems are likely to cause spatial dislocation and what it is worth to try to save regional economies from adverse market forces such as the ones generated by t' e rising price of energy.

18801 (PB—82-225830) The energy connection: incorporating energy concerns in the economic development process. Roberts, J.S. (Resource Planning Collaborative, Alexandria, VA (USA)). 1981. 55p. NTIS, PC A04/MF A01.

The connection between energy and economic development is important to the nation's vitality and to each community's economic prospects. Therefore, changes in the energy situation warrant examination of how energy relates to economic development in general, and to economic development planning in particular. This guidebook, intended for a wide audience, addresses the energy/economic development connection. Information is provided to decision makers and planners on how to incorporate energy concerns in the economic development planning process. There is a description of how energy relates to economic development and a summary of the actions that should be taken. Step-by-step examination of the economic development planning process and suggestions where energy concerns would modify that process are provided. A case study illustrates how the guidance would be applied in a community. Sources of further assistance, including information hotlines, organizations to contact and useful documents, are listed.

5302 Assessment Of Energy Technologies

18802 (DOE/ER/10231—1) Into the second century (at Tuskegee Institute) with a focus on energy. Final report. (Tuskegee Inst., AL (USA). Carver Research Foundation). 1982. Contract FG05-81ER10231. 36p. NTIS, PC A03/MF A01; 1. Order Number DE83005602.

Portions are illegible in microfiche products.

A seminar series was developed for the Tuskegee Institute campus and the geographically adjacent population. The goal was to enlighten the target group on energy and energy-related issues; therefore, the project was designed to focus attention on energy

technologies and energy-related issues, and to compile and disseminate the information on those issues. The seminars included such topics as ramifications of the carbon dioxide fossil fuel issue, use of solar collectors in energy conservation applications, teaching energy awareness to the school aged child, energy and our technological futures, and the global carbon geosystem. Speakers were representatives of local, state, and national agencies.

18803 **(NAS/EPRD—15) Side effects of renewable energy sources. Revised edition.** Medsker, L. (National Audubon Society, New York (USA). Research Dept.). Dec 1982. 75p. NTIS, PC A04/MF A01. Order Number DE83900852.

Using preselected criteria and guidelines, a number of side effects were identified, and qualitative descriptions were compiled along with a bibliography of recent references for nine major renewable sources of energy. Various stresses, potential consequences, and possible mitigating factors are tabulated as the initial step toward establishing a SERES data base that will include for each type of renewable energy: environmental stresses organized by category; ecological consequences; possible mitigating factors and actions; and other data that can be used as input to models for projecting trends and for various calculations related to environmental side effects. This data base will be updated periodically. (PSB)

18804 **(NUREG/CR—3082) Probabilistic approaches to LCO's and surveillance requirements for standby safety systems.** Lofgren, E.V.; Varcolik, F. (Science Applications, Inc., McLean, VA (USA)). Nov 1982. Contract AC02-76CH00016. 198p. (BNL-NUREG—51628). NTIS, PC A09/MF A01; 1 - GPO. Order Number DE83006908.

Portions are illegible in microfiche products.

Results are presented for a comprehensive analysis of risk-based methods for establishing Limiting Conditions for Operation (LCO) and surveillance requirements for on-line test and repair of nuclear power plant safety system components. Limiting Conditions for Operation refers to the legal constraint on safety system component outage times that are imposed by the NRC as part of the reactor operating license. Generally, when a safety system component is removed for repair or test for a period of time there is a period of increased vulnerability concerning the probability that the affected safety system will be available to mitigate an accident. This period of increased vulnerability exists until the component is restored to service. The constraint on the duration of this period, the allowed outage time (AOT), is the aspect of LCOs that is of interest here. In particular, methods are reviewed and developed that relate measures of risk to the AOT. Only by explicitly relating risk to AOT can outage times be constrained by placing limits on risk. Methods developed for relating risk measures to outage times are presented. The review and analysis of risk related methods for establishing LCOs are described.

18805 **(ORAU/IEA—25(1982)) Institute for Energy Analysis research report 1982.** (Oak Ridge Associated Universities, Inc., TN (USA)). Oct 1982. Contract AC05-76OR00033. 25p. NTIS, PC A02/MF A01. Order Number DE83006680.

The Institute for Energy Analysis was established in 1974 to examine broad questions of energy policy. More specifically, it assesses energy policy and energy research and development options and analyzes alternative energy supply and demand projections from technical, economic, and social perspectives. The Institute focuses primarily on national energy issues, but it is also concerned with regional and international energy questions and their implications for solution of domestic energy problems. This report covers carbon dioxide, nuclear power, electric power; biological risk assesment; energy models and data analysis. (PSB)

18806 **(PNL-SA—10989) Feasibility of an EIS Follow-up Program.** Nelson, I.C.; Jaquish, R.E.; Watson, D.G. (Pacific Northwest Lab., Richland, WA (USA)). Dec 1982. Contract AC06-76RL01830. 12p. (CONF-821215—15). NTIS, PC A02/MF A01; 1. Order Number DE83006196.

From DOE environmental protection information meeting; Denver, CO, USA (7 Dec 1982).

Portions are illegible in microfiche products.

The proposed level of an EIS Follow-up Program is believed to be feasible and that it can and should be implemented. Guidance to authors should result in fewer, but more important, commitments for mitigating adverse environmental impacts. Selecting the significant commitments from Records of Decisions published since July 1, 1979 for tracking to satisfaction should result in conformance with regulations, orders, and the intent of the NEPA.

18807 **Health risks of energy technologies.** Travis, C.C.; Etnier, E.L. (eds.). Boulder, CO; Westview Press, Inc. (1983). 292p. (CONF-810130—). Westview Press, Inc., 5500 Central Avenue, Boulder, CO 80301 $25.00.

From American Association for the Advancement of Science symposium; Toronto, Ontario, Canada (8 Jan 1981).

This volume examines occupational, public health, and environmental risks of the coal fuel cycle, the nuclear fuel cycle, and unconventional energy technologies. The 6 chapters explore in detail the relationship between energy economics and risk analysis, assess the problems of applying traditional cost-benefit analysis to long-term environmental problems (such as global carbon dioxide levels), and consider questions about the public's perception and acceptance of risk. Also included is an examination of the global risks associated with current and proposed levels of energy production and comsumption from all major sources. A separate abstract was prepared for each of the 6 chapters; all are included in Energy Abstracts for Policy Analysis (EAPA) and four in Energy Research Abstracts (ERA).

18808 **Health and safety impacts of renewable, geothermal, and rusion energy.** Holdren, J.P.; Anderson, K.B.; Deibler, P.M.; Gleick, P.H.; Mintzer, I.M.; Morris, G.P. (Univ. of California, Berkeley). pp 141-208 of Health risks of energy technologies. Travis, C.C.; Etnier, E.L. (eds.). Boulder, CO; Westview Press, Inc. (1983).

From American Association for the Advancement of Science symposium; Toronto, Ontario, Canada (8 Jan 1981).

The public may view many renewable energy sources as having no direct public impacts because they produce no pollutants during normal operation. However, these energy technologies produce health impacts during their fabricatin and construction, and also through the materials-supply sectors required to support them. This survey of the health risks associated with renewable energy technologies concludes that some of the renewable options have particular promise for reducing health and environmental costs per unit of energy delivered to well below levels associated with the use of oil and coal; Holdren and his co-authors feel that few, if any, pose the indirect threats of fossil fuels and nuclear fission. 46 references, 7 tables.

18809 **Primary enzyme quantitation.** Saunders, G.C. US Patent Application 6-354,573. 4 Mar 1982. 18p. Contract W-7405-ENG-36.

The disclosure relates to the quantitation of a primary enzyme concentration by utilizing a substrate for the primary enzyme labeled with a second enzyme which is an indicator enzyme. Enzyme catalysis of the substrate occurs and results in release of the indicator enzyme in an amount directly proportional to the amount of primary enzyme present. By quantifying the free indicator enzyme one determines the amount of primary enzyme present.

18810 **(AD-A—116883/0) Replication of japanese encephalitis virus. Annual summary report no. 3, jul 80-sep 81.** Blair, C.D. (Colorado State Univ., Fort Collins (USA). Dept. of Microbiology). Sep 1981. 17p. NTIS, PC A02/MF A01.

Gene expression in the flavivirus Japanese encephalitis virus (JEV) was studied by three different approaches. Virus-specific RNA in infected cells was radiolabeled in the presence of actinomycin D, and analyzed by sucrose gradient sedimentation and agarose gel electrophoresis. In addition to the 40S genome RNA and a probable replicative intermediate, two small single-stranded species, designated 15S RNA and 12S RNA, were observed. They were shown by oligonucleotide mapping to be subsets of the 40S RNA and different from each other. Their kinetics of synthesis suggested that they functioned in virus replication probably as subgenomic mRNAs, and were not merely breakdown products of 40S RNA. Virus-specified proteins were separated from host cell proteins by radioimmune precipitation and analyzed by polyacrylamide gel electrophoresis and fluorography. A total of 13 different polypeptides were seen, with molecular weights ranging from 98,000 to 10,000. Their total molecular weight exceeded the coding capacity of the virus genome.

18811 **(BARC—1063) Bio-Organic Division progress report, July 1977-1979.** Choughuley, A.S.U.; Rao, P.S. (eds.). (Bhabha Atomic Research Centre, Bombay (India)). 1980. 130p. NTIS (US Sales Only), PC A07/MF A01; 1. Order Number DE82902607.

18812 **(INIS-mf—7320) Animal experimental study on the roentgen densitometric determination of the arterial circulation conditions.** Hetzer, R. (Kiel Univ. (Germany, F.R.). Medizinische Fakultaet). 11 Sep 1979. 37p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83780146.

Thesis.

After the injection of contrast media (UROGRAFIN) into the abdominal artery, roentgenologic density measurements were carried out on five pigs (body weight 20 kg) on the common iliac arteries by videodensitometry. Densitograms registered above the flow area were applied in the time measurements of the contrast medium bolus and also in the determination of the relative volume of vascular sections. Like this the relative blood flow in both blood vessel systems could be determined in 49 individual measurements and could be compared with the simultaneously applied electromagnetic method. After the analysis of different methods for densitogram evaluation had been carried out, a satisfying correlation between the blood flow rates and the measured electromagnetic values could be obtained for the best procedure. In densitometry the methodical procedures of time measurement are of considerable importance. Reliable time values were found in cross-correlation of the densitograms and in the determination of the mean curve ascent. The measurement of vascular volume sections by densitometry showed a good correlation in comparison with the angiometric determination. The present investigation results are a contribution to the advance of quantitative evaluation procedures in angiography. (orig./MG).

18813 **(INIS-mf—7474, pp v) Effects of singlet oxygen enzymatically generated on DNA.** Furtado, S.T.F.; Duran, N. (Universidade Estadual de Campinas (Brazil). Inst. de Quimica). 1980. (In Portuguese). NTIS (US Sales Only), PC A06/MF A01.

From 2. regional meeting on chemistry; Araraquara, Sao Paulo, Brazil (6 Nov 1980).

18814 **(LBL—15368) Circular differential scattering is an important part of the circular dichroism of macromolecules.** Bustamante, C.; Tinoco, I. Jr.; Maestre, M.F. (Lawrence Berkeley Lab., CA (USA)). Nov 1982. Contract AC03-76SF00098. 30p. NTIS, PC A03/MF A01. Order Number DE83007022.

Differential scattering of incident left and right circularly polarized light is an important contribution to the circular dichroism of macromolecules. In principle both differential absorption and differential scattering of circularly polarized light contribute to circular dichroism, but differential scattering is increasingly important for particles whose dimensions are greater than one twentieth the wavelength of light. Outside the absorption bands of the particle, only differential scattering contributes to the circular dichroism. The sign and magnitude of the differential scattering is quantitatively related to the relative orientations and the distances between the scattering units of the particle. The interpretation of the circular differential scattering depends on a simple, classical method. Thus, in understanding a measured circular dichroism, it will often be easier to relate the differential scattering to the structure of a particle (such as a virus) than it it to relate the differential absorption to the structure.

18815 **(PB—83-133686) Advisory Committee on Military Personnel Supplies periodic report: Committee on Environmental Sciences and Resources. Final report.** (National Research Council, Washington, DC (USA). Advisory Board on Military Personnel Supplies). 1981. 20p. NTIS, PC A02/MF A01.

During the past year, there have been significant accomplishments in three areas. Four mutant strains of Trichoderma reesei have been compared in terms of productivity of cellulase activities (including beta-glucosidase) and their physiological and metabolic parameters, enabling the investigators to select the best performing strain for a given application. Studies have now shown that certain surfactants have a stabilizing effect on cellulase and this finding could lead to a significant increase in enzyme utilization efficiency. The mechanism of induction of beta-glucosidase by T. reesei has now been partially elucidated. This provides a sound scientific basis for future research of beta-glucosidase formation by this organism.

18816 (SERI/CP—232-1520, pp 133-146) **Membrane reactors for continuous coenzyme regeneration.** Wandrey, C.; Wichmann, R. (Kernforschungsanlage, Juelich, Germany). Dec 1982. NTIS, PC A09/MF A01; 1.

From International workshop on biotechnology for the production of chemicals and fuels from biomass; Vail, CO, USA (29 Sep 1980).

The importance of continuous coenzyme regeneration is discussed with respect to chemical reaction engineering. The benefit of coenzymes covalently bound to water-soluble polymers is especially stressed. The performance of membrane reactors for coenzyme regeneration is discussed in comparison with other reactor concepts. The coenzyme-dependent production of L-amino acids from the corresponding α-keto acids is used to illustrate how precise turnover numbers as a function of enzyme/coenzyme ratio, initial substrate concentration, and conversion can be obtained. Thus, it becomes possible to develop a concept for optimal operating points with respect to enzyme, coenzyme, and substrate costs per unit weight of product.

18817 **Repair nucleases.** Fasella, P.M. (Universita di Rome, Italy). pp 611-614 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The contract research has focussed on the mechanism of the DNA-dependent ATPase/ATP-dependent DNAase of Micrococcus lysodeikticus, especially the processes and the role of ATP analysed by kinetic methods.

18818 **Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells.** Falaschi, A. (Consiglio Nazionale delle Ricerche, Pavia, Italy). pp 633-639 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

During the past five years (1976-1980) the following goals have been pursued: (1) study of the properties of DNA enzymes presumably involved in DNA repair and/or replication in human cells; this basic work is essential to describe the molecules available; (2) study of the functions of the enzymes acting on DNA in animal

cells in the different aspects of DNA metabolism. Information about their most likely role can be achieved by determining their levels in different physiological conditions, studying their distribution within the different cell compartments, understanding their responsibilities in the reparative and replicative processes; (3) study of the properties of the cells derived from patients affected by inherited diseases involving DNA repair. These can be considered as human mutants of DNA repair and the description of the alterations of their properties at the cellular and molecular levels could unique insights into the most important aspects of the repair processes; (4) reconstruction of the DNA repair processes in vitro. The study involves the isolation of subcellular systems capable of functioning as DNA repair complexes.

18819 **(INIS-mf—7323) Autoradiographic investigations on the prednisolone-induced atrophy and on interdependent reactions in different lymphatic tissues of rabbit.** Steigueber, F. (Medizinische Hochschule Luebeck (Germany, F.R.). Klinik fuer Paediatrie). 19 Dec 1980. 70p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83780143.

Thesis.

Under the appliation of ^{3}H-thymidine the method of organ extirpation (thymectomy and appendectomy) was combined with the cell labeling technique. By autoradiographic evaluation of histologic specimens the content of labelled lymphocytes in the examined tissues was determined. Thymus, appendix, subcutaneous lymphatic nodes and spleen were examined. In the thymus the application of prednisolone induced organ atrophy. Appendectomy leads in the thymic marrow to an increase of the mitotic activity. In the appendix the application of prednisolone causes the emptying of basal lymphatic follicles. Thymectomy induces a large increase of the mitotic activity of the lymphatic tissue. Not all lymphatic nodes show identical changes after organ extirpation and after prednisolone application, but considerable differences. Only a decreased proliferation of labled lymphocytes, occuring under prednisolone application, can be detected in the marrow of the mesenteric lymphatic nodes and of the red splenic pulp in the animal with thymectomy. This result is also valid for the marrow of the remaining deep lymphatic nodes, after thymectomy and appendectomy. The lymphocyte counting in the peripheral blood done during prednisolone treatment, does not indicate that the lymphocyte values depend to a notable extent on the previous surgical treatment of the animals.

18820 **Fluorometric method of quantitative cell mutagenesis.** Dolbeare, F.A. (to Dept. of Energy). US Patent 4,345,027. 17 Aug 1982. Filed date 12 Dec 1980. vp.

PAT-APPL-215767.

A method for assaying a cell culture for mutagenesis is described. A cell culture is stained first with a histochemical stain, and then a fluorescent stain. Normal cells in the culture are stained by both the histochemical and fluorescent stains, while abnormal cells are stained only by the fluorescent stain. The two stains are chosen so that the histochemical stain absorbs the wavelengths that the fluorescent stain emits. After the counterstained culture is subjected to exciting light, the fluorescence from the abnormal cells is detected.

18821 **Chromosome pairing and chiasma formation in human meiosis.** von Wettstein, D. (Carlsberg Lab., Copenhagen, Denmark). pp 597-602 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The purpose of the present research project is to analyze chromosome pairing as mediated by the synaptonemal complex at zygotenepachytene and chiasma formation from the synaptonemal complex at diplotene in primary spermatocytes. Meiotic nuclei at the relevant stages have been sectioned serially, electron micrographs of these sections taken, and three dimensional reconstructions for all bivalents prepared with the specific aim to count recombination nodules as well as the number of incipient chiasmata recognizable at early diplotene by short retained pieces of synaptonemal complex. The number of nodules and chiasmata determined in this way has been compared with the number of chiasmata countable at late diplotene, diakinesis and metaphase I in the light microscope.

18822 (SERI/CP—232-1520, pp 17-30) **Prospects for the applied genetic engineering of yeast.** van Keulen, H.; Thomas, D.Y. (National Research Council of Canada, Ottawa, Ontario). Dec 1982. NTIS, PC A09/MF A01; 1.

From International workshop on biotechnology for the production of chemicals and fuels from biomass; Vail, CO, USA (29 Sep 1980).

The possibilities for genetically engineering into the yeast Saccharomyces cerevisiae new genes for the utilization of carbohydrates are examined. The present status of cloning vectors for yeast and some of their properties are reviewed. The development of methods for cloning new genes into yeast are described. We discuss briefly the desirable features for the development of genetically modified yeasts for industry. 57 references.

18823 **Cellular and genetic analysis of mouse blastocyst development.** Pedersen, R.A.; Spindle, A.I. (Univ. of California, San Francisco). pp 91-108 of Cellular and molecular aspects of implantation. Glasser, S.R.; Bullock, D.W. (eds.). New York, NY; Plenum Publishing Corporation (1981).

The development of mouse embryos has been studied by both cellular and genetic approaches. In the cellular analysis the determination of cell fate in blastocysts and in cell populations derived from them has been studied in an attempt to estimate the time that these cells become committed to their fate. In the genetic analysis existing mutations that are lethal to mouse embryos have been utilized to discern essential features of early development. In this review the timing of cell determination in the ICM and the primary ectoderm has been considered as well as the manifestation of defects in mouse embryos that are homozygous for the A/sup y/ allele of the agouti locus.

18825 **(BNL—32371) 2-D fitting and interpolation applied to image-distortion analysis.** Bizais, Y.; Zubal, I.G.; Rowe, R.W.; Bennett, G.W.; Brill, A.B. (Brookhaven National Lab., Upton, NY (USA)). 1982. Contract AC02-76CH00016. 13p. (CONF-8208112—1). NTIS, PC A02/MF A01; 1. Order Number DE83006684.

From NATO ASI on pictorial analysis conference; Bonas, France (1 Aug 1982).

Portions are illegible in microfiche products.

A practical method for distortion analysis was developed by imaging an array of points objects, the pattern of which is known, but with unknown actual locations. A 2D fitting to the discrete pat-

tern estimates the true locations of the point objects, from the measured locations, assuming random perturbations. This procedure leads to the knowledge of distortion characteristics at some sparse and arbitrary points of the image field. Therefore, an optimal expansion of the sparsely sampled function to cover the whole image was studied in order to estimate distortion characteristics in each pixel. Examples drawn from Nuclear Medicine image are presented.

18826 (DOE/ER/60034—T1) Medical applications of stable isotopes: mass spectroscopy and nuclear magnetic resonance. Partain, C.L.; Robinson, R.G. (Vanderbilt Univ., Nashville, TN (USA). Medical Center; Kansas Univ., Kansas City (USA). Medical Center). 25 Jan 1982. Contract FG05-82ER60034. 25p. (CONF-820166—Summ.). NTIS, PC A02/MF A01. Order Number DE83006764.

From Symposium on medical applications of stable isotopes: mass spectroscopy and nuclear magnetic resonance; Tucson, AZ, USA (25 Jan 1982).

This report summarizes the content of the Symposium entitled Medical Applications of Stable Isotopes, co-sponsored by the American College of Nuclear Physicians and the U.S. Department of Energy and held on January 25, 1982, in Tucson, Arizon. Within the overall framework of clinical biochemistry and clinical pharmacokinetics, the two technologies of mass spectroscopy and nuclear magnetic resonance were reviewed and analyzed in terms of their potential in the area of medical applications of stable isotopes. It was observed that nuclear medicine could perhaps be more accurately redefined as diagnostic imaging and functional measurement, utilizing both the traditional unstable (radioactive) isotopes and stable isotopes. This seems appropriate and perhaps necessary because nuclear medicine scientists and physicians have crossed traditional professional lines, promptly adapted to new technologies, stimulated the clinical application of computer techniques, justified and utilized complex and expensive instrumentation, and are quite experienced in the physical and mathematical basis of isotope (stable and unstable) preparation, handling, and use in in vivo clinical applications.

18827 (DOE/SF/00012—T15) Myocardial metabolism, perfusion, wall motion and electrical activity in Duchenne muscular dystrophy. Perloff, J.K.; Henze, E.; Schelbert, H.R. (California Univ., Los Angeles (USA). Lab. of Biomedical and Environmental Sciences). 1982. Contract AC03-76SF00012. 32p. NTIS, PC A03/MF A01. Order Number DE83005566.

The cardiomyopathy of Duchenne's muscular dystrophy originates in the posterobasal left ventricle and extends chiefly to the contiguous lateral wall. Ultrastructural abnormalities in these regions precede connective tissue replacement. We postulated that a metabolic fault coincided with or antedated the subcellular abnormality. Accordingly, regional left ventricular metabolism, perfusion and wall motion were studied using positron computed tomography and metabolic isotopes supplemented by thallium perfusion scans, equilibrium radionuclide angiography and M-mode and two-dimensional echocardiography. To complete the assessment, electrocardiograms, vectorcardiograms, 24 hour taped electrocardiograms and chest x-rays were analyzed. Positron computed tomography utilizing F-18 2-fluoro 2-deoxyglucose (FDG) provided the first conclusive evidence supporting the hypothesis of a premorphologic regional metabolic fault. Thus, cardiac involvement in duchenne dystrophy emerges as a unique form of heart disease, genetically targeting specific regions of ventricular myocardium for initial metabolic and subcellular changes. Reported ultrastructural abnormalities of the impulse and conduction systems provide, at least in part, a basis for the clinically observed sinus node, intraatrial, internodal, AV nodal and infranodal disorders.

18828 (DOE/SF/00012—T16) Evidence for a caudate role in aphasia from FDG positron emission tomography. Metter, E.J.; Riege, W.H.; Hanson, W.R.; Phelps, M.; Kuhl, D.E. (California Univ., Los Angeles (USA)). 1982. Contract AC03-76SF00012. 22p. NTIS, PC A02; 3. Order Number DE83005854.

Paper copy only, copy does not permit microfiche production.

In a recent study correlations between language function and regional glucose metabolism from FDG positron computed tomography were examined. Caudate metabolism correlated with PICA speaking and comprehension factors, as well as BDAE mean writing and reading scores. To identify the language function implicated with caudate metabolism in these eleven patients, twenty subtests making up these two PICA factors and mean BDAE scores were correlated to caudate metabolism. Also a principle components analysis on the twenty subtests identified three factors, only one of which correlated with caudate metabolism. Evidence was found that the caudate has a functional relationship to recognition or motor planning of simple and overlearned materials. This involved simple syntax, low levels of abstraction, identification or sequencing of phonetic and semantic material. This role appeared related to but independent of Broca and frontal lobe function, and may involve the focusing of cortical functions, by allowing two or more regions to interact together.

18829 (HRP—0904097/3) Computed tomographic scanning in New Hampshire. Chynoweth, G. (United Health Systems Agency, Inc., Concord, NH (USA)). Jan 1980. 49p. NTIS, PC A03/MF A01.

Computed tomographic (CT) scanning in New Hampshire is reviewed in terms of the following: type, distribution, and setting; practice, capacity and use; cost and reimbursement, planning and regulation. As of May 1979, New Hampshire had 4.7 CT scanners per million population. The location of existing scanners leaves certain population centers within the state somewhat distant from CT services. Administrative characteristics affecting individual scanner operations include: hours of operation; nonpatient time during the operational hours of CT scanner; and technical capability of CT scanner. During 1979 the three hospital based scanners in New Hampshire performed 6,100 scans. The task in planning is to develop criteria to determine where to have the most appropriate state-of-the-art scanner technology. Objectives and actions which should be used in health systems planning for CT scanning in New Hampshire are outlined.

18830 (HRP—0904147/6) Criteria and standards radiation therapy services. (New Orleans Area/Bayou-River Health Systems Agency, Inc., LA (USA)). 1981. 28p. NTIS, PC A03/MF A01.

Contents: Definition and description of service; Criteria and standards--radiation therapy services; Appendix - Methodology for determining need for radiation therapy services within the New Orleans Area/Bayou-River Health Service Area.

18831 (HRP—0904199/7) Criteria and standards: CT scanning services. (New Orleans Area/Bayou-River Health Systems Agency, Inc., LA (USA)). Apr 1981. 42p. NTIS, PC A03/MF A01.

The criteria and standards for computerized tomographic (CT) scanning services were developed for section 1122 and appropriateness review. A short, general description of the service and related definitions and abbreviations are provided. The respective numbers of criteria and standards for each of the six health service characteristics are availability (3 criteria, 4 standards); accessibility (9, 11); cost (3, 4); quality (11, 21); acceptability (5, 8); and continuity (4, 7). Most of the standards contain specific performance requirements.

18832 (INIS-mf—7310) Determination of the radioimmunologic concentration of 5-androstene-3β-17β-diole in the blood plasma of patients suffering from common psoriasis. Ehlen, M. (Mainz Univ. (Germany, F.R.). Medizinische Fakultaet). 28 Mar 1979. 49p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83780147.

Thesis.

A new radioimmunologic method for the determination of ADIOL in the blood plasma was developed. The author produced the antiserum herself and she examined it on cross-reactions. This method resulted to be very sensitive and in the standard curve a linear range of 0.04 ng to 1.5 ng was obtained. Moreover, the ADIOL concentration was determined in the blood plasma of 16 control subjects and of 35 patients suffering from psoriasis. The result was a far-reaching correlation with the results described in

literature, although they were obtained by means of differing determination procedures. (orig./MG).

18833 (INIS-mf—7312) Twelve years nuclear medicine - results and outlook - illustrated by 7414 cerebral scintigrams. Klaeger, R. (Muenchen Univ. (Germany, F.R.). Fachbereich Medizin). 12 Feb 1981. 88p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83780148.

Thesis.

It is a fact that until the invention of computerized tomography, scintiscanning was an excellent method for diagnosing tumours, metastases, vascular processes, inflammations and traumatic lesions. Now even the differential diagnosis is possible, and also follow-up examinations are often carried out. On the basis of the 7414 considered and studied scintigrams we came to the positive result that in most cases with deliberate questions directed to specific facts, this examination procedure was applied. Scintigraphy can be considered as the predecessor of computerized tomography. With respect to differential diagnostics the following can be said: Cerebral scintigraphy measures in cases of cerebral lesions only masses, whereas the computerized tomograph permits within certain limits even the differentiation between lesion and perifocal oedema. The tomographs of the last generation even differentiate between white and grey cerebral substance. Nevertheless, the residual domain of scintigraphy remains untouched: the patients with non-focal symptoms, including headaches, general behaviour disorders and psychiatric processes. (orig./MG).

18834 (INIS-mf—7317) Radioimmunoassay of pancreatic glucagon. Improvement of method and application in order to determine the role of glucagon in the polytrauma. Schrezenmeir, J. (Wuerzburg Univ. (Germany, F.R.). Fachbereich Medizin). 29 Jan 1980. 146p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE83780149.

Thesis.

Radio-iodizing of glucagon under the application of chloralamine-T was examined and optimized with respect to its dependency on the concentration of the reacting agents, on the duration of reaction and on the pH value. The methods of other authors to purify labeled glucagon were put in contrast with the considerably faster and less complicated batch-procedure, in which Ouso G32 is applied. In order to improve the immunogenity of the weak antigen glucagon, different immunogenic preparations were produced and compared with each other. By the glucagon polymerisation with carbodiimid in guadinin HCl-solution, antibodies of excellent quality were obtained. With the glucagon polymers for the first time an immunogen was found, which produced exclusively so-called specific anti-glucagon sera. The influence of the albumin concentration and of the charcoal quantity on the separation of free and antibody-bound glucagon by means of dextran-covered charcoal was investigated. The early beginning of the investigations, the observation of the course, the temporal correlation of numerous other parameters and the fast application of shock-measures led to new knowledge about glucagon in the polytrauma. (orig./MG).

18835 (INIS-mf—7326) RIA for indol alkaloids. Arens, H. (Bochum Univ. (Germany, F.R.)). 23 Aug 1979. 186p. (In German). NTIS (US Sales Only), PC A09. Order Number DE83780144.

Thesis.

The technique of RIAs for indol alkaloids (ajmaline, ergotamine, ergocristine, ergometrine, and lysergic acid) is described, and applications for this RIA and the RIA for raubasine and serpentine are mentioned. The indol alkaloide RIAs are shown to be suitable both for alkaloid distribution measurements in Catharantus and Rauwolfia plants and C. purpurea sclerotia as well as for the selection of high-efficiency strains and the optimisation of cultures of plant tissues and saprophytic fungi. (orig./MG).

18836 (LBL—14450) Design analysis and performance evaluation of a two-dimensional camera for accelerated positron-emitter beam injection by computer simulation. Llacer, J.; Chatterjee, A.; Batho, E.K.; Poskanzer, J.A. (Lawrence Berkeley Lab., CA (USA)). May 1982. Contract AC03-76SF00098. 10p. (CONF-821011—45). NTIS, PC A02/MF A01; 1. Order Number DE83005866.

From IEEE nuclear science symposium; Washington, DC, USA (20 Oct 1982).

Portions are illegible in microfiche products.

The characteristics and design of a high-accuracy and high-sensitivity 2-dimensional camera for the measurement of the end-point of the trajectory of accelerated heavy ion beams of positron emitter isotopes are described. Computer simulation methods have been used in order to insure that the design would meet the demanding criteria of ability to obtain the location of the centroid of a point source in the X-Y plane with errors smaller than 1 mm, with an activity of 100 nanoCi, in a counting time of 5 sec or less. A computer program which can be developed into a general purpose analysis tool for a large number of positron emitter camera configurations is described in its essential parts. The validation of basic simulation results with simple measurements is reported, and the use of the program to generate simulated images which include important second order effects due to detector material, geometry, septa, etc. is demonstrated. Comparison between simulated images and initial results with the completed instrument shows that the desired specifications have been met.

18837 (PB—82-229543) High-yield criteria for panoramic radiography. Final report. White, S.C.; Forsythe, A.B. (California Univ., Los Angeles (USA)). Jun 1982. 47p. NTIS, PC A03/MF A01.

Panoramic radiographs should be obtained when the examination offers the prospect of providing information that will assist in patient care. The purpose of this study was to determine whether high-yield criteria could be developed for the use of panoramic radiographs in the treatment planning of patients seeking dental care. Clinicians were asked what signs or symptoms caused them to order a panoramic radiograph upon patient admission into the UCLA Dental Clinic. At the time the patient was radiographed, a variety of demographic and clinical measures were recorded. The most important high-yield criterion for the panoramic examination is whether the radiograph is ordered for 'general screening examination' (a negative predictor) and whether the radiograph was ordered for any specific examination (a positive predictor). The use of these (or any other) decision rules required clinical judgment of the costs (social and economic) of a missed positive finding relative to that of an unproductive examination.

18838 (PB—82-239989) The implications of cost-effectiveness analysis of medical technology. Background paper number 2: case studies of medical technologies. Case study number 13: cardiac radionuclide imaging and cost effectiveness. (Office of Technology Assessment (U.S. Congress), Washington, DC). May 1982. 70p. NTIS, PC A04/MF A01.

Cardiac radionuclide imaging is a new and rapidly expanding diagnostic technology that promises to make significant contributions to the diagnosis and management of heart disease. Dynamic changes are occurring in the technology at the same time diffusion is taking place. The combination of diffusion and technological development creates an imperative for careful evaluation and prospective planning. Clinical applications of cardiac imaging include the diagnosis of coronary artery disease, evaluation of cardiac function abnormalities, verification of the diagnosis of acute myocardial infarction (heart attack), and monitoring of patients under treatment for establishing cardiac disease. The report describes the dimensions of the technology of cardiac radionuclide imaging. Information is summarized on the industry producing radionuclide imaging equipment, on clinical applications of technology, and on the costs and efficacies of the various techniques. Finally, formulation of some of the issues involved in the assessment of the technology's cost effectiveness is presented.

18839 (PB—83-118497) The utility of administrative diagnostic x rays. Final report. Potchen, E.J.; Gard, J.W.; Gift, D.A.; Harris, G.I.; Alexander, G.P. (Michigan State Univ., East Lansing (USA)). Aug 1982. 95p. NTIS, PC A05/MF A01.

A significant proportion of diagnostic medical procedures is used in response to public or private policy rather than individual patient/physician interaction. Such administrative use of diagnostic procedures illustrates the lack of accepted 'referral criteria.' This document reports results of a descriptive study of policy formula-

tion and implementation regarding use of employment-related chest and lumbar-spine radiographs by employers in the State of Michigan. Major observations of the study are that: factors influencing policy formulation are diverse and largely nonmedical; organizational policies developed in similar environments are often very dissimilar and are highly subject to external influence; and perceptions of policy success and examination utility typically are subjective and uncertain. It is concluded that considerable opportunity exists to enhance the utility of policy-motivated x rays by modifying the processes of policy formulation and evaluation.

18840 **Human peripheral blood hemopoietic stem cell kinetics, migration, collection, preservation and transfusion after ionizing irradiation.** Stryckmans, P. (Universite Libre de Brussels, Belgium). pp 833-841 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Studies on autologous bone marrow transplantation were performed. The following areas were imvestigated: (1) studies on autologous bone marrow transplantation (ABMT); (2) studies on peripheral blood CFU-GM stem cells; (3) studies on preservation of marrow CFU-GM stem cells; (4) studies on preservation of marrow CFU-GM stem cells; (4) studies on the regulation of committed stem cells; and (5) studies on mature granulocytes (PMN) transfusions.

18841 **Spectra and physical factors in x-ray diagnosis.** Pierson, D.H. (UKAEA, Atomic Energy Research Establishment, Harwell, England). pp 1215-1218 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The aim of this project is to obtain data on the various steps involved in the production of a radiographic image with a view to optimizing the quality of the radiograph and reducing the dose to the patient. The objectives have been to study the effect of the relevant parameters on spectrum shape both experimentally and theoretically, to obtain the response of intensifying screens as a function of photon energy, to determine the attenuation by the patient and to study the effect of scattered radiation.

18842 **Examination of the scientific problems related to radiation protection with a view to improving the planning and application of the results of research to this question.** Lindell, B. (International Commission on Radiological Protection, Sutton, England). pp 1275-1279 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

At the beginning of the term of this contract, ICRP was completing the review of its basic recommendations on radiation protection; this was published in 1977 as Recommendations of the International Commission on Radiation Protection (ICRP Publication 26). Since its foundation in 1928 ICRP has maintained a continuing review of the biological bases of radiation protection, and in the past thirty years it has published five basic sets of recommendations. ICRP has initiated, within the last four years, a program intended to develop practical guidance on the policies recommended in ICRP Publication 26, and, at the same time, to continue studying the biological effects of irradiation so as to ensure a sound basis for radiation protection. One of the most important fatures of ICRP Publication 26 is its emphasis on the need to keep all justified exposures from radiation as low as reasonably achievable, with dose limits as additional boundary constraints for the most highly exposed individuals. This emphasis contrasts with the former concept that the dose limits themselves could be used for pirposes of planning and design. Instead, ICRP now recommends that the planning and design of installations involving exposures should be minimised to the lowest practicable level. Current work by the ICRP in the area of radiation protection is summarized.

18843 **(CBPF-NF—012/81) Magnetotactic bacteria at the geomagnetic equator.** Frankel, R.B.; Blakemore, R.P.; Araujo, F.F.T. de; Esquivel, D.M.S.; Danon, J. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1981. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE82703286.

Magnetotactic bacteria are observed in freshwater and marine sediments of Fortaleza, Brazil, situated close to the geomagnetic equator. Both South-seeking and North-seeking bacteria are present in roughly equal numbers in the same samples. This observation is consistent with the hypothesis that the vertical component of the geomagnetic field selects the predominant polarity type among magnetotactic bacteria in natural environments.

18844 **(SERI/CP—232-1520, pp 3-15) Metabolic regulation of yeast.** Fiechter, A. (ETH-Hoenggerberg, Zuerich, Switzerland). Dec 1982. NTIS, PC A09/MF A01; 1.

From International workshop on biotechnology for the production of chemicals and fuels from biomass; Vail, CO, USA (29 Sep 1980).

Metabolic regulation is based on a number of endogeneous and exogeneous process variables which may act constantly or time-dependently on the living cell. Therefore, the observed phenomena of the regulation are the result of physical, chemical, and biological parameters. The proper identification of the relevant parameter in a complex system of growing cells is not simple. By using the pulse chemostat technique, a systematic approach for medium design has been developed and medium supplements that are essential for metabolic control have been identified. The examples given in this paper show the usefulness of the methodology for metabolic investigations. So far three major classes of regulatory types have been described. The first class includes strains like Trichosporon cutaneum and Candida tropicalis, whose growth kinetics in carbon-limited media strictly follow the Monod equation. The second class of yeast strains including Saccharomyces cerevisiae displays diauxic growth behavior in batch culture. The third class of regulation is found in Schizosacharomyces pombe, a yeast that lacks the glyoxylic acid shunt. The results obtained clearly show that the mechanisms of glucose repression cannot be explained simply by catabolite repression but include rather complex additional mechanisms which have to be elucidated in detail. In addition the usefulness of the methodological approach described in this paper to continuous culture and its refinements for the metabolic studies of microbes is demonstrated. Proper identification of the acting effectors is critical to the recognition of the relationships existing between the activity of the cell and its environment.

18845 **(NDRE/PUBL—81/1001) Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain.** Walaas, I. (Forsvarets Forskningsinstitutt, Kjeller (Norway)). 30 Jun 1981. 28p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE82902732.

The investigation compares the localization of different transmitter candidates, particularly the amino acide γ-aminobutyrate (GABA) and glutamate (GLU), in limbic and basal ganglia regions in the rat brain. In particular, the characteristics of nucleus accumbens septi have been studied in some detail. GABA neurons have been found in nucleus accumbens, and GABA projections

from this nucleus have been identified in restricted basal forebrain and mesencephalic regions. GLU projections from the neo- or allocortex have been found to terminate in nucleus accumbens and other forebrain and hypothalamic nuclei. Neurotransmitters in local neurons have been identified in the hippocampus, nucleus accumbens, septum and caudatoputamen by means of local kainic acid injections, while neurons in the mediobasal hypothalamus have been studied after systemic treatment of newborn animals with monosodium glutamate. The results are discussed as a basis for a better understanding of limbic-basal ganglia interactions.

18846 **Calcium influx into corn roots as a result of cold shock.** Zocchi, G.; Hanson, J.B. (Univ. of Illinois, Urbana). *Plant Physiology;* 70: 318-319(1982). Contract AC02-76EV00790.

Corn roots or washed corn root tissue exposed to cold shock absorb 20 to 24% more $^{45}Ca^{2+}$ into a nonexchangeable phase than control roots. Addition to fusicoccin largely prevents this additional calcium influx. The results are discussed in relation to injury-induced changes in membrane permeability of root cell memebranes.

18847 **Deposition and clearance of inhaled particles in the human respiratory tract.** Morgan, A. (UKAEA, Atomic Energy Research Establishment, Harwell, England). pp 1057-1061 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The object of this programme was to obtain relevant data on the deposition and short-term clearance of aerosols inhaled by man, in order to facilitate improved estimates of radiological dose to the respiratory tract, which are currently based on the recommendations of the International Commission on Radiological Protection (ICRP). Using groups of healthy, male smoking and non-smoking volunteers it was planned to establish the normal range of intersubject variability and obtain information on possible effects on the respiratory system of cigarette smoking. This might, in turn, assist the early diagnosis of respiratory deficiency.

18849 **(Juel—1748) Influence of plant roots on the degradation of the herbicides atrazine and 2,4-D in soil.** Seibert, K. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Radioagronomie). Nov 1981. 150p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE83750148.

Thesis. Submitted to Bonn Univ. (Germany, F.R.).

The influence of corn roots on the degradation of [ethyl-1-^{14}C]-atrazine, [ring-U-^{14}C] - 2,4-D and [methyl-2^{14}C] -2,4-D has been investigated in laboratory experiments with soils of the Eschweiler (clay) and Neuhofen Neu (clayey sand) sites. The experiments were supplemented by measurements of herbicide uptake in the corn plants and of the fate of soil herbicides.

18850 **(PB—82-241282) Senegal food and energy study: energy use and opportunities for energy-related improvements in the food system.** (Brookhaven National Lab., Upton, NY (USA); Checchi and Co., Washington, DC (USA)). Aug 1980. 252p. NTIS, PC A12/MF A01.

The growth of agriculture, the mainstay of Senegal's economy, is contingent upon the acquisition of imported energy. This study examines the key constituents of the Senegalese food system in relation to energy supply and demand. The study first analyzes the food system (crop characteristics, and physical and institutional components) and the energy system (sources, costs, supply/conversion technologies, and consumption patterns). Next, energy-use profiles are provided on the production and distribution processes of millet/sorghum, rice, groundnuts, and fish. Household cooking practices are also discussed. Recommendations to improve irrigation, the second key to increasing food supplies, include funding for low-capacity photovoltaic and solar-thermal systems, setting up windmills in coastal areas, and designing large-capacity solar plants similar to those at Bakel. To save energy at the household level, wood or charcoal cooking stoves must be made more efficient and the use of biogas plants should be studied. To counter the serious depletion of fuelwood, Senegal's main indigenous energy resource, energy-efficient charcoal production should be developed, the charcoal industry reorganized, and afforestation and forest management programs expanded.

18851 **(PB—82-245796) Method for estimating historical irrigation requirements from ground water in the high plains in parts of Colorado, Kansas, Nebraska, New Mexico, Oklahoma, South Dakota, Texas, and Wyoming. Water-resources investigations (interim).** Heimes, F.J.; Luckey, R.R. (Geological Survey, Denver, CO (USA). Water Resources Div.). May 1982. 70p. NTIS, PC A04/MF A01.

Historical information on ground-water pumpage for irrigation is required for use with a computer model of the High Plains aquifer. Available historical data on ground-water pumpage in the High Plains were inadequate for use with the computer model. Consequently, a method was developed to estimate historical pumpage data. Two principal components were used to develop estimates of ground-water pumpage: (1) Acreage irrigated; and (2) irrigation demand. The Blaney-Criddle formula was used to calculate consumptive-use requirements for irrigated crops grown on the High Plains. The irrigation demand for each crop was estimated by subtracting precipitation available to the crop from the consumptive-use requirement of the crop.

REFER ALSO TO CITATION(S) 18324, 18571, 18716, 18718, 18728, 18777, 18957, 19252, 19257

18852 **(AD-A—117304/6) Biologic dosimetry for nuclear environments by electron paramagnetic resonance (EPR) methods. Conference paper.** McCreery, M.J.; Swenberg, C.E.; Basso, M.J.; Conklin, J.J.; Hsieh, J. (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). 18 Jun 1982. 14p. NTIS, PC A02/MF A01.

A number of stable and unstable free radicals are produced by exposure of calcified tissues to ionizing radiation. Identification of the exact molecular nature of these radicals and their kinetic annealing properties awaits further investigation. However, the high stability and the dose-response characteristics of the signal at g = 2.0023 make it very promising for use in biologic dosimetry. A 10-25 mg sample of enamel is enough to determine absorbed dose from 10-10 to the 7th power rads of gamma, X-ray, and accelerated electron exposures. This sample, which is no more than a chip from the ridge of a human tooth, does not expose the living portion of the tooth and so is relatively noninvasive. Investigations to establish a standard method for this procedure and to evaluate neutron dose is in progress. Although the procedures outlined here are relatively noninvasive, this technique affords other approaches that are even

less invasive. Unlike optical methods, the sample for EPR analysis does not have to be transparent. It is not even necessary to suspend the sample as a fine powder. As long as the bone or tooth sample is within the dimensional limits of the tuned EPR cavity, it can be analyzed intact. This fact makes in vivo analysis feasible. We are currently making attempts to enlarge the EPR cavity with modification of the corresponding electronic components so that a finger can be analyzed. If this approach is successful, the expedient evaluation of large numbers of casualties might be possible by a method that is noninvasive and nondestructive.

18853 (DOE/ER/60017—T1) DNA repair in B. subtilis: an inducible dimer-specific W-reactivation system. Fields, P.I. (Pennsylvania State Univ., University Park); Yasbin, R.E. (Pennsylvania State Univ., University Park (USA); Rochester Univ., NY (USA). School of Medicine and Dentistry). 1982. Contract AC02-81ER60017. 25p. NTIS, PC A02/MF A01. Order Number DE83004432.

Thesis.

The W-reactivation system of Bacillus subtilis can repair pyrimidine dimers in bacteriophage DNA. This inducible repair system can be activated by treatment of the bacteria with uv, alkylating agents, cross-linking agents and gamma irradiation. However, bacteriophage treated with agents other than those that cause pyrimidine dimers to be produced was not repaired by this unique form of W-reactivation. In contrast, the W-reactivation system of Escherichia coli can repair a variety of damages placed in the bacteriophage DNA.

18854 (DOE/ER/70230—T1) Chronic irradiation and brain development. Final (4th) progress report. Zamenhof, S. (California Univ., Los Angeles (USA). School of Medicine). 10 Mar 1980. Contract AT03-76ER70230. 19p. NTIS, PC A02/MF A01. Order Number DE83005080.

The possible long term effects of chronic radiation exposure have been studied. Rats were given tritiated drinking water (3μCi/ml) before pregnancy, during pregnancy and threafter, continuously through 5 generations. The brains were studied at 30 and 120 days postnatally. Significant decreases in weight, DNA and protein contents of specific parts of the brain were found, the most pronounced decreases being in the diencephalon. The decreases in protein content were more pronounced than the decreases in DNA content; the decreases were also more pronounced at 30 days than at 120 days, and more pronounced in the fifth generation than in previous generations. An attempt was made to explain these complex phenomena on the basis of known periods of proliferation of various brain cells, damage to mothers themselves in each generation, and damage and repair of nucleic acids caused by radioactivity.

18855 (DOE/EV/05601—T1) Effects of radiation and chemicals on SV40 oncogenesis. Final progress report. Coggin, J.H. Jr. (University of South Alabama, Mobile (USA). Dept. of Microbiology/Immunology). May 1982. Contract AS05-77EV05601. 49p. NTIS, PC A03/MF A01; 1. Order Number DE82015639.

Portions are illegible in microfiche products.

This project is directed toward developing rapid, quantitative methods and immunologic markers which will permit the early detection of newly forming tumors induced or enhanced by x-irradiation, chemical carcinogens, viruses or combinations of the three. The projects under study in our ongoing collaborative program seek to develop the detailed understanding and precise methodology required for the early detection of embryonic antigens in transformed cells induced by the co-carcinogenic effects of viruses and low-level radiation. A new technique for assaying the earliest transformed cells appearing in a carcinogen treated population affords a unique tool for this study. Present plans involve efforts to purify embryonic determinants from fetal and transformed cells of hamsters and mice in order to define their role in the transformation process and in tumor development.

18856 (EPRI-EA—2753) Review of the Energy Productivity Center's least-cost energy-strategy study. Interim report. Wood, D.O.; Manove, M.; Berndt, E.R. (Massachusetts Inst. of Tech., Cambridge (USA). Energy Lab.). Jan 1983. 184p. NTIS, PC A09/MF A01. Order Number DE83901458.

This report presents a thorough review of the Mellon Institute's Energy Productivity Center (EPC) study, The Least-Cost Energy Strategy: Minimizing Consumer Costs through Competition. The purpose of the review is to assess and evaluate the EPC methodology, data base, and results. Where possible, the report reaches definite conclusions concerning the usefulness of the study for policy analyses, identifies policy parameters, and notes the sensitivity of the results to changes in input assumptions. This review should be helpful to the modelers in their subsequent work and to those who interpret their conclusions.

18857 (GSF-B—1387) Pathogenesis of radiation-induced osteosarcomas. Luz, A. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Abt. fuer Pathologie; Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Medizin). Jul 1980. 208p. (In German). NTIS (US Sales Only), PC A10/MF A01. Order Number DE83750173.

Results backed by experiments are presented here for the osteosarcoma induction in mice after incorporation of radium-224 or thorium-227. The dose-response relationship for osteosarcoma induction by short-lived alpha radiation is very much influenced by the time distribution of the applied activity and is thus influenced by the dose rate in the skeleton. In the total dose range investigated the decrease of the dose rate leads to an increase of the ontogenetic effect to a tumour incidence of nearly 100%. If the internal exposure starts after the period of rapid skeletal growth the osteosarcoma risk is not reduced compared with the young animals and the tumour latency period is even shorter. This reducing of the latency period is dependent on the expected osteosarcoma risk. In the case of a lower exogenic risk the date for the clinical tumour manifestations seems to be determined by the date of the manifestation of spontaneous osteosarcomas whereas, in the case of a great exogenic risk, the agent obviously determines when the tumour appears. A spontaneous osteodysplasia in the skeleton of old female mice certainly cannot be defined as the co-factor of osteosarcomagenesis. The non-neoplastic proliferated cells which are morphologically similar to the osteodysplastia are found to a larger extent in the skeleton of female mice with but also in male mice. It is not clear whether this is a real preneoplasia or a parallel phenomenon of the osteosarcomagenesis.

18858 (GSF-B—1388) Experimental study of the occurrence and properties of C-type retroviruses in radiation-induced osteosarcomas in mice. Erfle, V. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Abt. fuer Pathologie; Muenchen Univ. (Germany, F.R.). Inst. fuer Medizinische Mikrobiologie, Infektions- und Seuchenmedizin). 1981. 150p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE83750172.

In the radiation induced osteosarcomas of the C 3 Hx101/F_1-mouse C-type virus particles had been found regularly with a density of 1.16 g/cm³, with high molecular RNA, a reverse transcriptase and the murine group-specific antigen p 30. Osteosarcomas of the NMRI-mouse, however, had only p 30 protein and so-called intracisternal A-type particles. After 'in vitro' cultivation retroviruses had been liberated from the osteosarcoma cells of the C 3 Hx101/F_1-mice as well as from the NMRI-mice type C. During the tumour latency period a virus expression of the C-type retroviruses had been found for a certain period in the first month after irradiation of the bone tissue had begun; then followed an antibody-reaction which continued to persist until the 8th month. Another virus expression was observed in the skeleton during the period when the osteosarcomas appeared. This virus expression was accompanied by a decrease in antibodies and a temporary increase of the viral p 30 protein in the serum. The viruses which had been isolated from the radiation induced osteosarcomas showed the properties which are typical for ecotropic C-type retroviruses of mice. After infection of new-born mice these viruses produced fibrosarcomas (C 3 Hx 101/F_1-mice) or lymphomas and osteomas (NMRI-mice). The results make it obvious that the endogenetic C-type retroviruses participate in the formation of radiation-induced sarcomas in mice.

18859 (HEHF—23) United States Transuranium Registry summary report, July 1, 1974 to October 1, 1975 to ERDA Division of Biomedical and Environmental Research. Norwood, W.D.; Newton, C.E. Jr. (Hanford Environmental Health Foundation, Richland, WA (USA)). Nov 1975. Contract AC06-76RL01830. 111p. NTIS, PC A06/MF A01; 1. Order Number DE82015463.

Portions are illegible in microfiche products.

The primary purpose of the Registry is to protect the interests of workers, employers and the public by serving as a national focal point for the acquisition and provision of the latest and most precise information about the effects of the transuranic elements on man. This is being done by establishing the population at risk. To date some 9063 transuranium workers have been so identified. On a continuing basis, the best current estimates of the amount and location of any internal deposition of any of the transuranium elements in employees are being accumulated. These determinations have been improved by reconciliation with actual burdens found in various organs at autopsy or by alternate methods. Such employees are followed clinically and by epidemiological methods to determine whether there may be any adverse effects on such desposits on health or longevity. Registry statistics are given for the following sites: Hanford, Rocky Flats, Los Alamos, Savannah River, Mount, and Oak Ridge. The seven appendces contain information related to the Registry activities.

18860 (INIS-mf—7363) Histological investigations on the effect of zytostatica, ionizing radiation and a radioprotective substance on spleen, lung, lymphatic nodes, bone marrow, skin and muscles on rats under drugs suitable for gynecological cancer therapy. Maeueler, R. (Kiel Univ. (Germany, F.R.). Medizinische Fakultaet). 12 Mar 1980. 80p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83780142.

Thesis.

The effects of radiation, zytostatica and on radiation protective substance on the organs: spleen, lung, lymphatic nodes, skin and muscles of the rat were examined. High-voltage gamma radiation, zytostatica cyclophosphamide, podophyllinic acid ethyl hydrazide and VM26, as well as N-acetyl homocystein thiol actone were applied as radioprotective substance in several combinations. The doses were adapted to those commonly used in human medicine. The different combinations are compared regarding side effects, as well as advantages and disadvantages of different doses. Podophyllinic acid ethyl hydrazide is found to be well suited as zytostatic substance for combination therapy. The histologically detectable side effects on the organs examined by adding N-acetyl homocystein thiol actone were not greatly reduced compared to the sole or combined application of radiation and cytostatica therapy.

18861 (KFK—3367) Dose exposure of the environmental population by natural and released Ra-226 and Pb-210 from an uranium mine prospect. Schuettelkopf, H.; Kiefer, H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Hauptabteilung Sicherheit). Aug 1982. 53p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83750169.

During a radioecological investigation in Grossschloppen, Fichtelgebirge, the concentrations of Ra-226 and Pb-210 were measured in drinking water, surface water, soil, sediments, grass, and locally produced important foods. Soil concentrations are higher by a factor of 3 compared with normal background. According to this higher concentrations in soil, the concentrations in many environmental materials are increased. Rather high concentrations were observed in the drinking water supply of Marktleuthen. Further increased concentrations are caused by uranium containing material crossing the surface soil layers. The mean bone dose exposure of the population of Grossschloppen may be about 92 mrem/a according to Ra-226 ingestion and 150 mrem/a according to Pb-210 ingestion. Ra-226, Pb-210, and Rn-222 activities released from an uranium prospecting mine of ESSO-ERZ are meaningless with respect to dose exposure of the population.

18862 (LA—9530) Lost-to-follow-up bias in an occupational mortality analysis: a quantitative consideration. Acquavella, J.F.; Tietjen, G.L.; Wilkinson, G.S. (Los Alamos National Lab., NM (USA)). Dec 1982. Contract W-7405-ENG-36. 12p. NTIS, PC A02/MF A01. Order Number DE83007116.

A major problem in occupational cohort studies is how to treat study subjects who are lost to follow-up (LTF). The assumptions made concerning their vital status may affect the results of comparative mortality analyses. The problem was considered within the context of an occupational follow-up study of white male employees at a nuclear facility in Colorado. In this analysis, 568 or 8% of cohort members were LTF. Comparative mortality for the entire cohort was estimated by treating LTF workers as lost at employment termination date, as living at the end-of-study date, and with cumulative mortality simulated between 0% and 100%. Results indicate that simulations of cumulative mortality among employees LTF can be useful in assessing the potential bias caused by LTF mortality assumptions. Further, a general method for assessing LTF bias in occupational analyses is proposed.

18863 (N—82-20857) Hematogical lesions as a function of dosage of long-term radiation. Gorlov, V.G.; Neyman, O.V. (Joint Publications Research Service, Arlington, VA (USA)). Mar 1982. 5p. (JPRS—80323). NTIS, PC A07/MF A01.

In its USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) p 124-129 (SEE N82-20834 11-51) Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), V. 16, No. 1, Jan. - Feb. 1982 p 86-89 REFS.

The quantitative patterns of damage to the blood system in the course of prolonged exposure to the ionizing radiation inherent in space were studied as well as the time characteristics of development of lesions in different blast elements. An effort was made to determine the minimal volume of hematological tests during long-term exposure to radiation to assess the general state of the blood system, on the basis of comparison of dynamics of changes in bone marrow and peripheral blood. Experiments were conducted on 285 mongrel rats weighing 180 to 200 g. The animals were exposed to radiation at dose rates of 300, 100, and 50 R/day. They were exposed continuously for 22-23/day. Analysis of the findings revealed that the dynamics of decline in total number of bone marrow cells during the phase of primary depletion is governed by an exponential law. There was distinct demonstration of the effects of cumulative dose and dose rate. A typical finding in all cell populations of bone marrow was an initial exponential decline in number of cells.

18864 (NASA-TM—76828) Role of immobilization of irradiated rats in the protective effect of bone marrow shielding. Gronskaya, N.F.; Strelin, G.S. (National Aeronautics and Space Administration, Washington, DC (USA)). Feb 1982. 7p. NTIS, PC A02/MF A01.

Transl. into ENGLISH from Radiobiologiya (Leningrad), V. 20, No. 2, 1980 p 259-262 REFS Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Central Sci. Res. X-ray Radiological Inst. of the USSR Ministry of Public Health.

Rats were exposed to X-radiation to study the influence of immobilization and shielding of part of bone marrow during exposure on survival. It is concluded that (1) the beneficial effect of the stress factor (created by the immobilization of rats during exposure) can aggregate with the effect of bone marrow shielding and, under certain conditions, imitate the latter and (2) the probability of the protective effect of immobilization should be taken into account when assessing the influence of bone marrow shielding.

18865 (ORNL/Sub—7846/14) Radiological safety and risk assessment. Hunter, P.H.; Barg, D.C.; Baird, R.D.; Card, D.H.; de Souza, F.; Elder, J.; Felthauser, K.; Jensen, C.; Winkler, V. (Ford, Bacon and Davis Utah, Inc., Salt Lake City (USA)). Feb 1982. Contract W-7405-ENG-26. 102p. (FBDU—417-002). NTIS, PC A06/MF A01; 1. Order Number DE83006353.

Portions are illegible in microfiche products.

A brief radiological safety and risk assessment of a nuclear power generation center with an adjacent on-site waste disposal fa-

cility at a specific site in the State of Utah is presented. The assessment was conducted to assist in determining the feasibility and practicality of developing a nuclear energy center (NEC) in Utah consisting of nine 1250 MWe nuclear pressurized water reactor (PWR) electrical generating units arranged in 3 clusters of 3 units each known as triads. The site selected for this conceptual study is in the Horse Bench area about 15 miles directly south of the town of Green River, Utah. The radiological issues included direct radiation exposures to on-site workers and the off-site population, release of radioactive material, and effects of these releases for both normal operations and accidental occurrences. The basic finding of this study is that the concept of an NEC in the Green River area, specifically at the Horse Bench site, is radiologically feasible.

18866 **(PB—82-250028) Report of state and local radiological health programs fiscal year 1980. Annual report.** Vassar, C.I. Jr; Moats, R.A.; Matthews, V.A. (Bureau of Radiological Health, Rockville, MD (USA)). Jun 1982. 32p. NTIS, PC A03/MF A01.

This report is the twentieth of a series based on data provided by 54 State and local radiological health programs. The resources and activities of State and local radiological programs are presented and summarized from data provided as of June 30, 1980. Summary data are included for fiscal years 1978 through 1980. Resources include data on personnel, funds, and equipment. The program activity areas are basic planning and administration, x-ray survey and control, environmental surveillance, radioactive materials, nonionizing radiation, and other radiological health activities.

18867 **(PB—83-120246) Background for protective action recommendations: accidental radioactive contamination of food and animal feeds. Final report.** Shleien, B.; Schmidt, G.D.; Chiacchierini, R.P. (Bureau of Radiological Health, Rockville, MD (USA)). Aug 1982. 55p. NTIS, PC A04/MF A01.

This report provides background material for the development of FDA's Protective Action Recommendations: Accidental Radioactive Contamination of Food and Animal Feeds. The rationale, dosimetric and agricultural transport models for the Protective Action Guides are presented, along with information on dietary intake. In addition, the document contains a discussion of field methods of analysis of radionuclides deposited on the ground or contained in milk and herbage. Various protective actions are described and evaluated, and a cost-effectiveness analysis for the recommendations performed.

18868 **(PNL-SA—10129) In search of the relevant lung dose.** Fisher, D.R. (Pacific Northwest Lab., Richland, WA (USA)). Dec 1982. Contract AC06-76RL01830. 9p. (CONF-820492—1). NTIS, PC A02/MF A01. Order Number DE83005554.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Researchers have traditionally been inconsistent in their methods of determining and reporting dose to the lung from inhaled radionuclides - a situation which has led to difficulties in later comparing results and deriving dose-response relationships. The dose quantities which at present are most generally assumed to be related to risk of stochastic radiation effects (such as lung cancer) are (1) mean dose equivalent to the bronchial epithelium basal cell layer for radon daughters, and (2) mean dose equivalent to the whole lung (including tracheobronchial lymph nodes) for all other radionuclides. The average radiation dose is calculated by assuming that the energy is homogeneously impared to the entire tissue mass. However, the actual dose received by a cell which becomes transformed or tumorigenic is likely to be very much different than the smear dose to the entire organ. This realization has led to further study of stochastic energy deposition processes in single cells or cell nuclei from internal emitters. The end product of the stochastic approach to dosimetry, sometimes called microdosimetry, is a probability density in specific energy. For alpha-emitting radionuclides in the lung, a concept that may be more important than dose is the probability that a cell is hit by an alpha particle.

18869 **Mechanism of untargeted mutagenesis in UV-irradiated yeast.** Lawrence, C.W.; Christensen, R.B. (Univ. of Rochester, NY). *Molecular and General Genetics;* **186**: 1-9(1982). Contract AC02-76EV03490.

The SOS error-prone repair hypothesis proposes that untargeted and targeted mutations in E. coli both result from the inhibition of polymerase functions that normally maintain fidelity, and that this is a necessary precondition for translesion synthesis. Using mating experiments with excision deficient strains of Bakers' yeast, Saccharomyces cerevisiae, we find that up to 40% of cycl-91 revertants induced by uv are untargeted, showing that a reduction in fidelity is also found in irradiated cells of this organism. We are, however, unable to detect the induction or activation of any diffusible factor capable of inhibiting fidelity, and therefore suggest that untargeted and targeted mutations are the consequence of largely different processes. We propose that these observations are best explained in terms of a limited fidelity model. Untargeted mutations are thought to result from the limited capacity of processes which normally maintain fidelity, which are active during replication on both irradiated and unirradiated templates. Targeted mutations are believed to result from the limited, though far from negligible, capacity of lesions like pyrimidine dimers to form Watson-Crick base pairs.

18870 **Radiation protection. Progress report 1980.** New York, NY; Harwood Academic Publishers (1981). 1368p. (In several languages). (EUR—7169-DE-EN-FR). Harwood Academic Publishers, P.O. Box 786, New York, NY 10276 $180.00.

Highlights of the accomplishments in radiation research by member states are summarized in this report covering the period 1976 to 1980. Research was performed in the following areas: dosimetry; radioactive contamination of the environment; hereditary effects of ionizing radiations; short-term effects of ionizing radiations; long-term effects of ionizing radiations; and evaluation of radiation risks. Separate abstracts were prepared for 112 items for inclusion in the Energy Data Base. There were 12 foreign language items which were not abstracted. (RJC)

18871 **Evaluation of the biological effectiveness of various types of radiation for different types of damage in mammalian cells and measurements of absorbed dose, dose distribution patterns and radiation quality for energy deposition by fast neutron beams.** Barendsen, G.W.; Broerse, J.J. (Radiobiological Inst. TNO, Rijswijk, Netherlands). pp 5-15 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The biological effectiveness of various types of radiation was evaluated for different types of damage in mammalian cells; Absorbed dose, dose distribution patterns and radiation quality for energy deposition by fast neutron beams were measured. (RJC)

18872 **Microdosimetric and EPR-investigations of energy transfer and induction mechanisms of radiation damage using model substances and human lymphocytes together with studies of special types of radiation induced biological damage in lymphocytes.** Muth, H.; Grillmaier, R. (Universitaet des Saarlandes, Saarbruecken, Germany). pp 47-58 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Microdosimetric and EPR-investigations of energy transfer and induction mechanisms of radiation damage using model substances and human lymphocytes together with studies of special types of radiation induced biological damage in lymphocytes have been performed. Project No. 1 comprises investigations of the physico-chemical and chemical phase as well as of the biological (especially at low temperature), whereas project No. 2 deals particularly with the processes of energy deposition. Further investigations at the biological level are performed in close cooperation of the two groups. (RJC)

18873 Biological effects of incorporated isotopes and radiation of high ionization density. Feinendegen, L.E. (Kernforschungsanlage Juelich G.m.b.H., Germany). pp 83-100 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This research program consists of four projects. The aim of the first project was to improve the understanding of the radiobiological effects of incorporated radioactive nuclides in comparison to the effectiveness of external radiations. The radionuclides investigated were ^{3}H, ^{125}I, ^{123}I, ^{64} and ^{57}Fe, i.e., emitters of Auger- and other low energy electrons that are used in biological radio-diagnostic experiments. The central point of the research studies was the question as to the relative contribution of the transmutation effects of these radionuclides, when incorporated into the DNA of mammalian cells, as compared to the local radiation effects of the low energy electrons emitted. The second project was to investigate single- and double-strand breaks of isolated DNA after irradiation of intact cells in culture and cell survival. In project three microdosimetric studies were conducted to determine the biological effectiveness of directly and indirectly ionizing radiations. The objective of project four was to investigate the challenging phenomena of suppression of IUDR incorporation in cells due to irradiation of mice with low and very low doses. (RJC)

18874 Microdosimetric studies of radiobiological effects at low doses. Metalli, P. (Comitato Nazionale per l'Energia Nucleare, Rome, Italy). pp 101-105 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The objective of this project was to determine the effects produced by fast neutrons and reference photons in various biological systems both in vivo and in vitro. The biological tissues examined were the crystalline lens of the mouse, two diploid species of Nicotiana, Vicia faba roots and mouse testes. (RJC)

18875 Microdosimetric studies relevant to radiation protection. Kellerer, A.M. (Wuerzburg Univ., Germany). pp 107-118 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The two projects in this contract had distinct topics. Project 1 dealt with the radiobiological implications of microdosimetry and with the analysis of radiobiological findings in terms of microdosimetry; it has also largely been devoted to development and application of statistical methods that are required in the deviation of dose-effect and RBE-dose relations for late somatic effects induced by different types of ionizing radiations. Project 2 was aimed at the computation of microdosimetric data and the further development of novel concepts of microdosimetry that permit a more realistic application of microdosimetric data to radiobiology. Certain aspects of the two projects were closely interlinked. (RJC)

18876 Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites. de Zeeuw, D.; Ringoet, A. (EURATOM-ITAL, Wageningen, Netherlands). pp 233-276 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publisher (1981).

This research program consists of eight projects. The titles of the projects are: a study of the dose effect response and the inter-relationship between cell survival, mutation and chromosomal aberration in plant cells; Development and improvement in accuracy and reproducibility of dosimetry systems for x-ray intercomparison, neutron and high level gamma radiation; Scheme for decontamination of agricultural areas after severe nuclear accidents; Migration of ^{90}Sr, ^{137}Cs and Pu in soils-verification of a computer model on the behavior of these radiocontaminents in soils of Western Europe; A survey of the contamination of plutonium, americium, and radioactive metals in soils of the Rhine River Delta; Immobilization and reduction of the availability of radiocontaminants in soils; Root and foliar uptake of radioactive contaminants by crops-their transport and redistribution in different plant organs; and Behavior of radionuclides in biological and non-biological processes at very low concentrations. (RJC)

18877 Metabolism and behaviour of THO and H_2O in herbivorous animals. van den Hoek, J. (Landbouwhogeschool, Wageningen, Netherlands). pp 303-306 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The metabolism of tritium has been studied in lactating cows after administration of tritiated water and of organically bound tritium (tritiated corn and tritiated hay). Milk was chosen as the product in which tritium metabolism was to be investigated. There are two main reasons for this choice. Firstly, milk is an important animal metabolite in which a protein (casein), a fat (milk fat) and a carbohydrate (lactose) are newly synthesized continuously. Incorporation of tritium in these important macromolecules can thus be studied in relation to the chemical form in which tritium is administered to the animal. Secondly, milk is an important food item and has a particular significance as a vector of radionuclides to man. The digestive processes in a polygastric herbivorous animal such as the cow, are so particular in a number of ways that the results obtained in this study can not always be extrapolated to monogastric animals, including man.

18878 Inventory of iodine-129 in the thyroid glands of pasture animals in the European Communities. Kuehn, W. (Gesellschaft fuer Strahlen- und Unweltforschung Muenchen, Germany). pp 313-317 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The objective of this project is to assay the accumulation of iodine 129 in the thyroids of pasture animals at selected sites in the European Community where reprocessing plants are planned or already in operation. (RJC)

18879 Translocation of radionuclides absorbed by the roots (redistribution) and subsequent release from leaves into the atmosphere (biological resuspension). Myttenaere, C.; Delmotte, A.; Horvath, F.; Mousny, J.M.; Ronneau, C.; Roucoux, P.; Vandecasteele, C.; van Hove, C. (Louvain Univ., Belgium). pp 341-348 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project is an investigation of root absorption, translocation, and foliar release of technetium in soybean plants and pysum. also described is the effect of technetium on photosynthesis, respiration and nitrogen fixation. (RJC)

18880 Studies of the interaction between DNA repair and replication in the eukaryotic organism Tetrahymena pyriformis. Westergaard, O. (Aarhus Univ., Denmark). pp 355-359 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Understanding of the effect of ionizing radiation on the genetic material requires detailed knowledge of the action of radiation and of the DNA repair process at the molecular level of chromatin. In order to obtain such detailed information we have studied the effect of radiation and repair on the molecular level of a single gene.

18881 Search for the biochemical events leading to the lethality of mammalian cells irradiated with x-rays. Celis, J.E. (Arhus Univ., Denmark). pp 361-364 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The aim of this contract was to search for sensitive assays to determine radiation damage at the level of polypeptide synthesis, protein-nucleic acid interactions and cell cytoarchitecture. Our studies in human HeLa cells have revealed a nuclear (IEF 49, MW 36 K) and a cytoplasmic polypeptide (IEF 52, MW 34K) whose relative proportions are sensitive to changes in the growth rate produced by lethal doses of x-rays. Given the common occurance of IEF 49 and 52 in most human, hamster, mouse and rat cell lines studied and their coherent behaviour in response to different conditions under which the rate of cell proliferation declines, it is suggested that these proteins may play important if not key roles in cell proliferation. These polypeptides represent potential markers for determining radiation damage at the level of gene expression.

We did not find any significant protein-DNA crosslinking or damage to cytoarchitectural components as a result of x-ray irradiation, at least to the limit of sensitivity of the methods used.

18882 Molecular aspects of repair phenomena in bacteria. Roersch, A.; van de Putte, P. (Leiden Univ., Netherlands). pp 365-379 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This research program consists of three projects. The project titles re: the excision repair process - its genes, enzymes and regulation; the mechanism of mutation induction and its relation to cellular repair processes; and the integration mechanism of bacteriophage Mu. Escherichia coli was used in the three projects as the tet organism. In the first two projects, the use of recombinant DNA technology greatly facilitated the investigations. (RJC)

18883 Effects of radiation on genetic and biochemical systems. Sobels, F.H. (State Univ. of Leiden, Netherlands). pp 381-430 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of thirteen projects. Seven projects investigate the genetic effects of ultraviolet and x radiations on mutants of Diosophila melanogaster (ebony). Six projects are studies of genetic radiation effects in mammalian cells. (RJC)

18884 Studies in the mechanism of repair of radiation damage in mammalian cells. van der Eb, A.J. (State Univ. of Leiden, Netherlands). pp 431-432 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

We have investigated a number of genetic diseases in man which are characterized by defective repair mechanisms of DNA damage. The method used to study these syndromes consists of determining the extent of host-cell reactivation of SV40 virus of SV40 DNA treated with radiation or a DNA damaging agent, after infection of the mutant cells.

18885 Studies on the relationship between repair mechanisms of radiation damage in DNA and oncogenic transformation. van der Eb, A.J. (State Univ. of Leiden, Netherlands). pp 433-436 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The purpose of this project was to search for inducible and error-prone repair mechanisms in mammalian cells, comparable to SOS-repair in E. coli, and to study the possible relationship, with induced reactivation and mutagenesis on one hand and the sensitivity to oncogenic transformation on the other hand.

18886 Effects of irradiation on the stability and expression of genetic information. Brachet, J. (Universite Libre de Brussels, Belgium). pp 437-464 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of five projects. The project titles are; the effect of ionizing radiations on nuclei acids as studied by electron spin resonance; genetics and biochemistry of DNA repair, mutagenesis and recombination in procaryotes and eucaryotes; logical, genetic, and biochemical analysis of the control of recombination and replication - mechanism of illegitimate recombination; radiosensitivity of the first differentiation events in the mouse, radiation responses of somatic cell hybrids and control of growth and genetic expression in cultural mammalian cells; and radiosensitivity of immune system, graft versus host disease and suppressor T cells. (RJC)

18887 Enzymology of repair of radiation damage to DNA. Winder, F.G.A. (Trinity Coll., Dublin, Ireland). pp 465-467 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Two proteins, of M/sub r/ 70,000 and 47,000, which separately bind to DNA polymerase I of Mycobacterium smegmatis to form loose complexes with altered affinity for single-stranded DNA and modified catalytic properties have been purified and investigated. However, the biological significance of the formation of these complexes is not yet clear. Some evidence has been found that DNA polymerase I of Escherichia coli can also complex loosely with other proteins to give forms with altered properties. Findings on the deoxyribonucleases of Aspergillus nidulans were related to findings with these enzymes in mammalian cells, but this has made clear the severe shortage of information on the neutral endodeoxyribonucleases of mammalian tissues other than the bovine pancreas. An investigation of these enzymes in different tissues of several mammals has been started. Studies on the toxicity of tritiated compounds for the mouse embryo in vitro have continued in collaboration with the group of Dr. F. Campagnari. Results have generally been compatible with the concept that toxicity in this system is related to the extent of incorporation into DNA or histones. However, some anomalous results have been obtained, particularly with [^{3}H] tryptophan.

18888 Studies on the effects of radiation on the blue-green algae. Houghton, J.A. (Univ. College, Galway, Ireland). pp 469-473 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

In this project the effects of radiation on a unicellular cyanobacterium, Gloeocapsa alpicola were investigated and the radiation repair system studied uv survival was examined and its effects were found to differ markedly depending on whether a far or near uv source was used for cell irradiation. The presence of an efficient pre-replication dark repair system has also has been demonstrated. (RJC)

18889 Studies on the effects of radiation on satellite associations of human chromosomes. Houghton, J.A. (Univ. College, Galway, Ireland). pp 475-478 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The effects of radiation on satellite association of chromosomes during metaphase and nucleolus organizer regions have been investigated in order to establish whether radiation may play a role in the induction of satellite association-related chromosoma non-disjunction in man.for cell irradiation. The presence of an efficient pre-replication dark repair system has also has been demonstrated. (RJC)

18890 Identify and characterize variant strains of mammalian cells deficient in repair of DNA damage. Bootsma, D. (Erasmus Univ. Rotterdam, Netherlands); Bridges, B.A. pp 479-481 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Six years ago a program was formed with the task of attempting to understand how human beings deal with DNA damage produced by agents such as ionizing radiation both at the cellular and biochemical levels. The strategy was to isolate and characterize mammalian cell variants showing differences in sensitivity that might be due to deficiencies in DNA repair. The collaboration between the contracting laboratories has resulted in the successful identification of several mutations.

18891 Identify and characterize various strains of mammalian cells deficient in repair of DNA damage. Bootsma, D. (Erasmus Univ., Rotterdam, Netherlands). pp 482-491 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects. In the first project, isolation procedures were developed for the collection of radiosensitive mutants derived from individuals suffering from genetic diseases, human-mouse hybrid cell lines. Radio-sensitive mutants were biochemically characterized in the second project. In the third project genetic characterization of DNA repair mutants by complementation analysis and localization on human chromosomes of genes involved in DNA repair were investigated. (RJC)

18892 Genetic and biochemical basis of radiation sensitivity in human and other cells in culture. Simons, J.W.I.M. (State Univ. of Leiden, Netherlands). pp 493-503 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects: genetic analysis of DNA repair; biochemical characterization of radiosensitive mutants; and the consequences of DNA damage and repair. (RJC)

18893 **Identify and characterize variant strains to mammalian cells deficient in repair of DNA damage.** Lohman, P.H.M. (TNO, Rijswijk, Netherlands). pp 505-513 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects: the isolation of radiosensitive mutants; biochemical characterization of radiosensitive mutants; and genetic studies on DNA repair mutants. The collection of human and Chinese hamster cell lines mutated in different DNA repair mechanisms has been expanded. Lesions in DNA after either uv-or gamma-radiation have been identified and the repair of these lesions in mammalian cels has been followed. The influence of thiol compounds on the induction of mutants in chinese hamster cells by ionizing radiation has been investigated. (RJC)

18894 **Identify and characterize variant strains of mammalian cells deficient in repair of DNA damage.** Bridges, B.A. (Sussex Univ., Brighton, England). pp 515-522 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

A study bank of 300 cell strains representative of normal individuals and a wide range of patients suffering from genetic diseases has been established. Mechanisms of DNA repair have been investigated. (RJC)

18895 **Genetic change and DNA repair mechanisms in the yeast Saccharoymces cerevisiae (1976-1980).** Parry, J.M. (University Coll. of Swansea, England). pp 523-535 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

During the course of the contract we have undertaken the development of genetic and technical systems capable of assaying in the yeast Saccharoymces cerevisiae the induction of DNA damage and genetic change after ionising radiation exposure. Yeast strains were constructed capable of detecting the induction of recombination (both between and within genes), point mutation (both base substitution and frameshift) and chromosome aneuploidy after radiation exposure. Such strains were constructed in both repair proficient and repair deficient genetic backgrounds. Using such strains we are able to determine the role of the various repair enzymes of yeast upon the production of each genetic event. These processes have also been studied in normal and various radiation sensitive homozygous fibroblasts and their heterozygous parent. Extensive studies have been performed of the induction of the above genetic events after irradiation of cells during specific stages of the mitotic and more recently the meiotic division cycle. The studies indicate that there are considerable differences in cellular sensitivity during the division cycle and the maximum induction of all the genetic events occurred in yeast cells irradiated in the G_1 phase of cel division. For future work under the contract we are now performing similar comparative studies in cells undergoing meiotic cell division. Such studies will enable us to determine the relative consequences of radiation induced DNA lesions during both somatic and reduction division.

18896 **Mechanisms of repair and mutations induced by x radiation in Saccharomyces cerevisiae.** Magni, G.E. (Milan Univ., Italy). pp 537-543 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of two projects. The general aim of the first investigation was to obtain evidence on the effect of repair mechanisms on the induction by x radiations of point mutations of knowm molecular nature, namely insertion/deletions (causing frameshift mutants) and base substitution (missense and non-sense mutations). The aim of the second project was to investigate whether chromosomal deletions and translocations can be induced in yeast by x-radiation and to assess a fast procedure for their detection. (RJC)

18897 **Radiation-induced chromosome aberrations.** Dennis, J.A.; Smith, H. (National Radiological Protection Board, Harwell, England). pp 557-562 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of two projects. In the first project the effect of changes in temperature and oxygen tension on the yield of radiation-induced chromosomal aberrations in human in peripheral blood lymphocytes was studied. The objective of the second study was to obtain data on the yield of radiation-induced aberrations in human lymphocytes as a function of radiation dose and quality and to use these data to test models of biological effects. (RJC)

18898 **Detection and assessment of biological effects of high natural radioactivity. Final report.** Dalebroux, M.A. (Institut National de la Recherche Agronomique, Dijon, France); Delpoux, M.; Leonard, A. pp 583-595 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Summaries of three programs are presented. Two programs consist of investigations of the genetic effects of high natural radioactivity and radiosensitivity on plants and plant cells. The other program is a study of the cytogenetic effects of high natural radioactivity on mammals. (RJC)

18899 **Radiation sensitivity of the human ovary.** Faber, M. (Finsen Lab., Copenhagen, Denmark). pp 603-609 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The normal development was studied on ovaries received from the coroner's office of autopsies performed on young women who died a violent death or after a short illness. Fresh ovaries were received after surgival removal (usually during treatment of breast cancer). Follicles from these ovaries were used to study growth and atresia by assaying the hormonal content of the follicle fluid and the variation in the DNA content in the granulosa cells by flow cytometry. Fetal gonads prepared from abortion material were received from the University Hospital of Copenhagen. The gonads were cultured for different time with and without hormones to serve as a model for studying the radiation effect on growth and differentiation of fetal ovaries. Experimental studies on mice were performed to determine whether the small follicle in the irradiated ovary could be protected against atresia by injection of gonadotropin.

18900 **Assessment and analysis of genetic damage in eukaryotes.** Holt, G. (Polytechnic of Central London, England). pp 615-617 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

In this study the eukaryote Aspergillus nidulans was used to estimate the degree of chromosomal non-disjunction, mitotic crossing over, chromosomal deletion, gene conversion and point mutation caused by ionising radiation of different quality including fast electrons, soft x-rays, β-particles and α-particles. Depending on the genetical end-point being considered, the calculated RBE values for the radiations were markedly different. With respect to chemical modification of the response of A. nidulans to radio-induced genetic damage studies have been made with the phorbol esters, 12-O-tetradecanoylphorbol-13-acetate (TPA), a tumour promoter, and its inactive (i.e. non-tumour promoting) derivative phorbol-13-acetate (PA) and two radiosensitisers, metronidazole and misonidazole. Studies have also been conducted using the Chinese hamster cell line V79 to determine crossing-over induced by ionising radiations and chemical agents. (RJC)

18901 **Influence of agents encountered in normal physiology on the capacity of cells to repair and recover from radiation damage.** Malone, J.F. (College of Technology, Dublin, Ireland). pp 619-626 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The project set out to investigate the radiobiological effects of physiological substances with a view to applying any significant

effects observed to clinical and mechanistic studies of radiation damage and repair. Substances investigated include vitamin A, vitamin C, cAMP, ethanol, oxygen deprivation, lactate and glucose metabolism. The results confirm the idea that useful radiobiologial modifiers can be found among the relatively non-toxic physiological substances. It has also identified several new effects and added to the literature on previously known modifiers.

18902 **Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells.** Radman, M. (Universite Libre de Brussels, Belgium). pp 627-632 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project, one of four internationally coordinated projects in the GERCC programme, was directed toward the study of (1) the chemical nature of the radiation and chemically-induced DNA lesions responsible for the induction of mutagenic repair and/or acting as targets for mutation fixation, (2) the accuracy and extent of DNA replication in vivo and in vitro upon radiation and chemically modified DNA templates (i.e. the mechanisms of mutagenesis at the molecular level), (3) the enzymology and genetics of the various systems responsible for the remarkable fidelity of DNA replication in bacteria and mammalian cells, (4) the mechanisms of the various modes of DNA recombination (rearrangements) and their relationship to mutagenic and carcinogenic cellular events and (5) the involvement of DNA alterations in the process of carcinogenesis.

18903 **Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells.** Devoret, R. (Centre National de la Rechereche Scientifique, Gif-sur-Yvette, France). pp 641-646 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project is a study of the rec A gene and of the protein coded by this gene. The gene is characterized genetically and the role of the protein in DNA repair processes and cellular radioresistance is presented. (RJC)

18904 **Studies on induced chromosome aberrations and chromosome structure.** Olivieri, G. (Comitato Nazionale per l'Energia Nucleare, Rome, Italy). pp 647-658 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of four projects. Project titles are: studies on the factors affecting the pattern of rejoining (symmetric or asymmetric) in the formation of chromosomal exchanges; study of factors (genetic and environmental) modifying the frequency and type of chromosomal aberrations; study of the transmission of chromosomal aberrations; and study of the relationships between structure of the chromosome and aberration produced. (RJC)

18905 **Cytogenetic studies in mammalian oogenesis and spermatogenesis on the induction of nondisjunction and structural chromosome anomalies, with special consideration of the genetic risk in the F_1 population.** Hansmann, I. (Goettingen Univ., Germany). pp 659-675 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects. The aims of the first project are to determine if non-disjunction can be induced in mammalian oocytes and if the incidence is dependent on the dose of x-rays, if there are species-specific effects, and if the age and hormonal constitution of the female interfere with radiosensitivity. The aim of the second project is to investigate the sensitivity of different stages during mouse oogenesis for the induction of chromosome anomalies by x-rays. The third project is a cytogenetic study of the radiation effects in maternal and paternal germ cells after exposure to 0, 20 or 200 rads. (RJC)

18906 **Direct and indirect radiation effects on DNA of eukaryotic cells and their repair.** Pohlit, W. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H., Neuherberg, Germany). pp 677-681 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The effects of alpha particles and 30 MeV electrons on DNA in yeast were studied. Identical biphasic kinetics of double strand break (dsb) repair under nongrowth conditions were found after irradiation with 30 MeV electrons and 3.5 MeV alpha particles if corrections wre made for irrepairable breaks and for RBE. (RJC)

18907 **Radiobiology of mitochondrial DNA.** Goffeau, A. (Louvain Univ., Belgium). pp 683-700 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Oxidative phosphorylation and non-phosphorylating enzyme activities in isolated mitochondria from uv sensitive, rho$^-$ producing strains (uvs rho) of mitochondrial and nuclear heredity were investigated. The reactivity of the mitochondril ATPase to the mutagenic agent ethidium bromide were studied. The effect of uv irradiation, photoreactivation and dark liquid holding on these processes were determined. New mutants modified in the repair of mitochondrial were isolated. (RJC)

18908 **Survival and mutation induction in Saccharomyces cerevisiae.** Kiefer, J. (Giessen Univ., Germany). pp 701-705 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project was carried out to study the mutagenic action of very densely ionizing radiations. High energetic heavy particles are an important component of extraterrestrial radiation; they are also produced by accelerators for physical and biomedical experiments. The yeast Saccharomyces cerevisiae was used as an eucaryotic model system which can be tested for a well defined mutation, namely the induced resistance to the arginine analogue canavanine. To establish the base line for this work mutation induction was studied with 80 kV x-rays. High LET experiments included ^{241}Am-α-particles and the accelerated ions Ar, Kr, Xe, Pb and U provided by the UNILAC at the Gesellschaft fuer Schwerionenforschung, Darmstadt, Germany. A haploid wild type strain 211-1a, was used.

18909 **Genetical and biochemical analysis of the radiosensitivity of eukaryotic cells.** Devreux, M. (Commission of the European Communities, Ispra, Italy). pp 707-726 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The aim of the research was to contribute to the knowledge of the processes involved in the induction and repair of radiation damages, and particularly by low doses in complex eukaryotic cells. The problem was tackled at both the genetic and the biochemical levels. Cells from Nicotiana and the Med-fly (Ceratitis) were used in these studies. (RJC)

18910 **Protection against the pathological effects of high doses of irradiation by marrow grafting; immunological and pathological studies of the graft-versus-host reaction provoked by incompatibility for minor antigens.** Mathe, G. (Association Claude Bernard, Paris, France). pp 729-774 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of eight projects. Project titles are: role of minor histocompatibility antigens in the development and the regulation of lethal graft-versus-host reaction (GVHR) developed across non-H-2 or H-2 barriers; histopathologic sequence of events in adult mice undergoing lethal graft-versus-host reaction developed across H-2 and/or non-H-2 histocompatibility barriers; attempt to prevent lethal GVHR developed across non-H-2 or H-2 barriers; role of recipient and donor sex in GVHR; bone marrow transplantation in irradiated subjects; suppressor cells and GVHR; consequences of low dose irradiation; and experimental and clinical screening of agents capable of inducing immunorestoration. (RJC)

18911 Consequences of radiation exposure: evaluation and treatment of pathological effects. Fliedner, T.M. . (Ulm Univ., Germany). pp 781-813 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The goals of the 5-year-Contract are to improve exisitng and develop new concepts and methods for the evaluation of the consequences of radiation exposure. In particular, the goal was to examine in what way the changes of hemopoietic stem cells in the peripheral blood after radiation exposure might be used as a biological indicator for the extend of hemopoietic radiation damage after whole and partial body exposure delivered at various doses and dose rates from external and internal sources. In addition it was felt, that quantitative and/or qualitative blood stem cell changes after radiation exposure might be useful in predicting the rest function of hemopoiesis as well as late effects, such as development of neoplastic and non-neoplastic lesions. In a second project area, the study of hemopoietic restoration after whole body irradiation as a function of the type of stem cells used appeared to be of interest as well as the conditions for obtaining an allogeneic engraftment in the allogeneic situation. There was evidence, taht stem cells might be obtained not only from bone marrow but also from the peripheral blood (by means of continuous cell centrifugation) and from fetal liver tissue. Thus, it appeared of interest to examine the possibilities and limitations of using blood stem cells for treatment of radiation induced bone marrow failure, to study the conditions of stem cell cryopreservation and to evaluate possibilities and limitations dogs and man. Removal of bacterial flora from the intestinal tract was performed to determine whether this type of bacterial decontamination might lead to a decrease in the severity of graft-host reaction.

18912 Bone marrow transplantation. van Bekkum, D.W. (Nederlandse Organisatie voor Toegepast Natuurwetenschappelijk Onderzoek,, Rijswijk). pp 815-831 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The bone marrow transplantation programme in Rijswijk comprises research in rodents which is directed at the fundamental aspects of bone marrow transplantation, and preclinical experiments with monkeys and dogs. The preclinical studies were the subject of the contract in the 1976 to 1980 Radiation Protection Programme. The major research objective was identification of the factors that permit a successful bone marrow transplantation for recipients who do not have an available brother or sister that is identical for the major histocompatibility complex (MHC) to serve as a marrow donor. During the past 4 years, major progress has been made in identifying these factors.

18913 Short-term effects of ionizing radiation on hemopoiesis and their treatment. Thierfelder, S. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H., Muenchen, Germany). pp 843-861 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The program of this association concerned the study of immunological and radiation-induced changes in chimaeras. More basic investigations were performed in rodents, while preclinical studies were mostly undertaken in dogs. Systematic hematomorphologic studies of locally irradiated patients were undertaken using improved methods of biopsy and histology. The relevance of some of the data regarding suppression of gvh with antibodies was tested in bone marrow transplantation of leukemic patients conditioned with high dose total body irradiation. In mice we could show that heterologous polyclonal and, more recently, monoclonal antibodies against T cells prevented graft-versus-host reactions in semiallogeneic H-2 incompatible F1 recipients. This suppression was shown to be associated with a full recovery of the immune functions of the chimaeras. Also in dogs anti-T antibodies suppressed gvh in 50% of semiallogeneic haploidentical dogs. So far it is not clear whether higher concentrations of anti-T or the addition of complement to the pretreatment will enhance our suppression of gvh in dogs. Histocompatibility testing, which was necessary for defining the degree of incompatibility in these bone marrow transplantations, was also studied for defining 11 lymphocyte determinants of the DLA-D locus using the mixed lymphocyte culture technique.

18914 Radiation and marrow aplasia: stem cell kinetics after prolonged or long-past radiation. Peschle, C. (Naples Univ., Italy). pp 863-866 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

A series of studies has been performed on the influence of erythropoietin and burst-enhancing factor at the level of erythroid precursors, both under normal conditions and after exposure to radiation or treatment with radiomimetic agents.

18915 Radiation sensitivity and recovery of the immune system. Doria, G. (Comitato Nazionale per l'Energia Nucleare, Casaccia, Italy). pp 867-871 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The aim of the studies carried out during the period 1976 to 1980 was to investigate the effects of whole-body irradiation on the immune system at the humoral and cellular level. The main findings were the following: (1) enhancement of antibody affinity in irradiated mice; (2) existence of two subpopulations of helper T cells with different radiosensitivity; (3) recovery profile of T and B cell populations in irradiated mice.

18916 Biological effects of irradiation. Hamers, R. (Brussels Univ., Belgium). pp 873-878 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The effect of whole-body x irradiation (2500 R) on the rabbit immune system was investigated.

18917 Effect of irradiation on leucocyte, hematopoiesis and thyroid - definition of new biochemical markers. Dumont, J.E. (Universite Libre de Brussels, Belgium). pp 879-886 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects. The first project concerns the biochemical mechanisms of phagocytosis with particular emphasis on two possible control elements, calcium and prostaglandins. The second project is a study of the catabolism of erythropoietin in marrow aplasia secondary to either chemotherapy or radiotherapy. Also assessed was the action of glucagon in erythropoiesis. The third project is a study of the thyroid as a target and model of radiation injury. A radioimmunoassay for thyroglobulin was developed to index radiation damage to the thyroid. (RJC)

18918 Consequences of irradiation on the local intestinal immunological system. Prevention and treatment of their effects. Bazin, H. (Louvain Univ., Belgium). pp 887-890 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The pathogenesis of microbial infections after whole-body or localized irradiation of the intestine has been investigated in this research program. The first consequences of irradiation appear to be failure of the biological barrier of the intestinal epithelium, an increase of pathogens in the intestinal flora, and a depression of the local and general immune response. (RJC)

18919 Effect of multiple daily fractionation of the dose in the small intestine of rats. Becciolini, A. (Univ. Firenze, Italy). pp 891-895 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program is a study of the effects of multiple daily fractionations of irradiation on the small intestine. Biochemical parameters studied were activities of brush border enzymes, lysosomal enzymes, and protein content of the epithelial cells. (RJC)

18920 Studies of the effects of ionizing radiation on DNA and its constituents. Huettermann, J.; Mueller-Broich, A. (Universitaet Regensburg, Germany). pp 897-902 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The project was aimed at the elucidation of optical properties of free radicals and their correlation to paramagnetic features by using combined optical and magnetic resonance spectroscopy as

tools of investigation. In this way, the large body of data available from pulse radiolysis studies in aqueous solutions using optical detection methods should become relatable to the detailed structural information obtainable by ESR-spectroscopy on radiation-induced intermediates.

18921 **Investigation on the radiation damage in biomolecules.** Schnabel, W.; Raap, I.A.; Washino, K.; Kihara, H.; Denk, O. (Hahn-Meitner-Institut fuer Kernforschung, Berlin, Germany). pp 903-905 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of studies on the quality of radiation damage in biopolymers and the influence of sensitizers and protecting agents on radiation induced reactions of biopolymers as determined by pulse radiolysis in conjunction with optical absorption and light scattering measurements. (RJC)

18922 **Chemical and physicochemical studies of chain breaks in DNA induced by γ-irradiation.** Schulte-Frohlinde, D.; von Sonntag, C. pp 907-913 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program is a study of gamma radiation induced strand breaks of DNA at specific chemical sites and the possible chemical reactions which can occur at these broken sites. The reaction of oxygen with aqueous DNA and a large number of model compounds determined by oxygen uptake measurements is also discussed. (RJC)

18923 **Pulse radiolysis of aqueous solutions of purines and related compounds.** Scholes, G. (Newcastle-upon-Tyne Univ., England). pp 915-918 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

An elucidation of the mechanism whereby DNA is degraded by OH radicals is of great importance with regard to an understanding of the indirect effects of radiation in vivo. DNA contains an equal number of pyrimidine and purine bases and although a fair amount is known about the interaction of OH radicals with pyrimidines, the situation is much less clear in the case of purines. This project has therefore involved (1) a study of the transient organic species produced on reaction of OH radicals with purines and related compounds by the technique of pulse radiolysis, using optical and conductimetric detection in the μs time scale (2) an examination of the permanent products after stationary γ-ray radiolysis.

18924 **Studies of lesions produced on heterocyclic base moities by gamma radiation of aqueous solutions of DNA or its elementary constituents.** Teoule, R. (Centre d'Etudes Nucleaires, Grenoble, France). pp 919-922 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The effort of our research group has been devoted to the determination of the chemical modifications induced on the base moiety under gamma irradiation. There are various types of lesions produced when DNA is irradiated and thus different final radiation products could be isolated such as free bases, altered bases and nucleosides, modified bases remaining attached to the DNA polymer chain. Due to its high molecular weight it is difficult to assess the damage of DNA itself and prior to analysis the modified bases must be liberated from the DNA chain by mild acid hydrolysis. Analysis of the radiation products of the DNA constituents is however easier to perform and a lot of information has been gained from their spectroscopic studies (NMR and mass spectrometry). In addition, the radiation chemistry of free bases and free nucleosides has been a very useful guide to determine the nature of the final radiation products of DNA.

18925 **Functional consequences of damage to eukaryotic cells by ionizing radiation.** Harris, G. (Kennedy Inst. of Rheumatology, London, England). pp 923-924 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The responses of lymphoid cells and tissues to ionizing radiation were studied during 1979 and 1980.

18926 **Post-irradiation changes at the cellular and subcellular levels.** Koehnlein, W.; Cramp, W.A. pp 925-928 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The original intention of this group of workers was to collaborate, by meeting and by short visits between laboratories, in an attempt to correlate post-irradiation changes in DNA with cell death. Emphasis was to be made on such changes at low doses. Considerable effort has been made using the hydroxylapatite chromatographic technique to determine DNA lesions. At low doses we can summarise our results by saying that DNA breaks themselves do not closely correlate with cell death because the breaks initially induced by radiation are rapidly and extensively repaired. It is possible even with this sensitive technique that a small number of undetected breaks are responsible for cell death. However, our findings have prompted us to look for post-irradiation interactions between DNA and its neighbouring macromolecules which lead to lethality.

18927 **Late somatic effects of ionizing radiation i the mammalian organism.** Duplan, J.F. pp 931-957 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

European Late Effects Project Group (EULEP) has pursued its efforts during the years 1976 to 1980 on: (a) standardization of experimental conditions in the participating institutions; (b) coordination of the planning and performance of on going research projects in the areas of radiation late effects; and (c) on execution of specific cooperative projects on carcinogenesis, on dysplastic and dystrophic lesions and of the toxicity of internal emitters. The activities of EULEP are subdivided in five committees: (1) Committee of Pathogenesis of Neoplastic Diseases; (2) Committee of Pathogenesis of Non-Neoplastic Diseases; (3) Committee of Internal Emitters; (4) Committee of Pathology; and (5) Committee of Dosimetry for External Radiation.

18928 **Late somatic effects, cancer induction and genetic radiosensitivity in mammals.** Maisin, J. (Centre d'Etude de l'Energie Nucleaire, Mol, Belgium). pp 959-979 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This research program consists of five projects. Project titles are: late effects in irradiated lung; late effects in the irradiated central nervous system; relative biological effectiveness of 50 MeV neutrons compared with ^{60}Co gamma rays in inducing leukemias and cancers in mice; studies on the factors influencing the chromosomal aberrations in mammals; and studies on the interactions between ionizing radiations and chemicals in producing chromosome aberrations in mammals. Highlights of accomplishments are summarized. (RJC)

18929 **Pathogenesis of radiation damage.** Goessner, W. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H., Muenchen, Germany). pp 981-1014 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The research work carried out during 1976 to 1980 has continued on long-term studies of the late effects of the short-lived alpha emitting bone-seekers ^{224}radium and ^{227}thorium. These studies have been extended to short-lived beta-emitting bone-seekers, especially ^{177}lutetium. This work was initiated in order to investigate the oncogenic effect of short-lived nuclides in dependence on the skeletal dose and their spatial and temporal distribution. In addition experiments with simultaneous exposure t the short-lived alpha-emitter ^{227}thorium (half-life 18.7 days) and a low amount of its mother-nuclide ^{227}actinium (22 years half-life) have shown a more than additive effect with regard to osteosarcoma risk. Epidemiological studies on patients treated with ^{224}radium have been continued.

18930 **Measurements of early and late radiation reactions in normal tissues.** Hopewell, J.W.; Wiernik, G. (Oxford Univ., England). pp 1015-1021 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The measurements of both the early and late effects of irradiation on the skin have been undertaken in the pig. This animal species has skin structure very similar to that of man and hence any experimental findings can be directly extrapolated to man. A wide range of complementary assay techniques have been used to examine the initial reaction of pig skin to irradiation. These have included direct visual observations (skin scoring), thermography, derman flood flow measurements (isotope clearance) and histology. The pathogenesis of radiation induced vascular damage in the hamster cheek pouch has also been studied. (RJC)

18931 Dosimetric and radiobiological investigations of iodine radionuclides in the human thyroid. Malone, J.F.; Cullen, M.J. (College of Technology, Dublin, Ireland). pp 1023-1026 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

A new method of monitoring iodine kinetics in the gland was evolved, validated and demonstrated to be applicable in practice. The method, based on applying thermoluminescent discs to the neck surface, greatly simplifies the practical aspects of acquiring kinetic data by removing the need for the subject to visit a laboratory to be counted. Further to this the many formulations and sets of physical data used in thyroid dosimetry were reviewed to select the most appropriate system for use today. As well as dosimetry this project was concerned with the radiobiological response of the thyroid. Following observation of clear dose-effect relationships for hypothyroidism in humans it was decided that it would be worthwhile developing a model of the thyroid in which radiobiological effects could be studied. This took the form of a cell culture system in which many of the morphological and functional properties of the gland were preserved. The model was exploited to demonstrate the effect of single doses of x-rays on cell survival, follicular morphology, and cell function, features which were for the first time clearly observed with this system.

18932 Movement of actinides in mammals. Dennis, J.A.; Smith, H. (National Radiobiological Protection Board, Harwell, England). pp 1027-1037 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of four projects. Project titles are: the binding of actinides to mammalian proteins and the other biologically occurring molecular; development of new chelating agents for removing plutonium from intracellular sites; experimental studies on the movement of actinides from wound-simulated sites; and lung clearance and translocation of inhaled industrial dusts. Highlights of the research activities of the four projects are presented. (RJC)

18933 Dosimetry of internal emitters. Dennis, J.A.; Smith, H. (National Radiological Protection Board, Harwell, England). pp 1039-1046 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects. Project titles are: the deposition and clearance of radioactive aerosols in animals lungs; pulmonary deposition and clearance characteristics of inhaled particles in human volunteers; and internal dose from carbon 14 labelled compounds. Highlights of project results are summarized. (RJC)

18934 Experiments on long term effects (bone carcinogenesis) induced by plutonmium in mice. Clemente, G.F. (Comitato Nazionale per l'Energia Nucleare, Casaccia, Italy). pp 1047-1055 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of two projects. In one project the dose incidence relationships for induction of bone tumors by plutonium 239 at low doses was investigated. The main task of the second project was to determine the influence of physical and biological variables on the dose incidence relationship for bone tumors due to plutonium contamination in mice. (RJC)

18935 Radiation damage from inhaled particles in the rodent lung. Lindop, P.J. (Saint Bartholomew's Hospital, London, England). pp 1063-1073 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The work carried out in the three projects is designed to assess qualitatively and quantitatively the hazards from inhalation of radioactive particles, with the initial emphasis on plutonium as insoluble particles in the murine lung. The projects cover the fields of particle size distribution and microdosimetry in the lung; the effects of particle size and dose on the metabolism and translocation of plutonium from the lung, and effects on non-neoplastic, early and late changes, as measured by alveolar macrophages, and fibrosis, as well as neoplasia.

18936 Microdosimetry of lung. Simmons, J.A. (Polytechnic of Central London, England). pp 1075-1080 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

If a radioactive particle is inhaled into the lung the particles which it emits (e.g. α's or β's) may give rise to a considerable amount of damage in a small volume In order to consider this possibility in a rigorous manner it was believed desirable to estimate the dose delivered to the irradiated material, and this study originally attempted to calculate the dose to lung tissue surrounding an inhaled $^{239}PuO_2$ particle. It soon became apparent, however, that dose may not be the most appropriate parameter to measure; instead, specific energy appeared to be a better alternative. This allows one to calculate the relative energy depositions in elemental volumes of material actually traversed by the alpha-particles. All measurements described in this report have been made on rat lung.

18937 Application to radiobiological problems of automated techniques for recognition of visual patterns. Vennart, J. (Medical Research Council, Harwell, England). pp 1081-1083 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project has concentrated on the microdistribution and retention of ^{239}Pu in skeletal and other tissues of the female mouse. The distribution studies are intended to provide an adequate basis for ^{239}Pu dosimetry assessment in the female CBA mouse skeleton. The dosimetry studies are necessary to complement ^{239}Pu tumor induction experiments in mice. A comprehensive analysis of the morphological structure of selected bones of the female CBA mouse skeleton mouse skeleton is included. The initial requirement of the project was to develop alpha-imaging techniques; using solid state fission track detectors for determining the distribution of ^{239}Pu relative to periosteal and endosteal surfaces of bone.

18938 Behaviour and carcinogenic effects of radioactive particles in the respiratory system. Vennart, J. (Medical Research Council, Harwell, England). pp 1085-1088 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project is in 2 parts. The first is the behaviour and the second the carcinogenic effects of radioactive particles in the respiratory system. The uptake and distribution of $^{235}UO_2$ in the rat lung was studied.

18939 Plutonium exposures in man. Direct monitoring of the lung and lung model assessments. Ramsden, D. (UKAEA, Atomic Energy Establishment, Winfrith, England). pp 1089-1096 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of two projects. The first projct is aimed at developing techniques to characterize the distribution of inhaled plutonium in the lung, so that a calibration figure could be derived which would be specific to the incident, the inhaled material and the observed distribution within the lung. The second project is aimed at establishing revised values of the parameters within lung models in order to match such models to observed lung clearance patterns. This project is also aimed at extending such models to describe quantitatively the excretion of plutonium via urine. (RJC)

18940 Cytogenetic researches on circulating lymphocytes of subjects professionally exposed to the hazard of ionizing radiation in a nuclear power plant station of Enel. Farulla, A. (Ente Nazionale Energia Elettrica, Torino, Italy). pp 1105-1110 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

From 1976 to 1980 a group of 50 radiation workers professionally exposed to ionizing radiation in a nuclear power station of Enel (Garigliano, Italy) have been monitorized by means of cytogenetic analyses in blood lymphocytes. In most subjects blood samples were obtained five times during annual medical check up. During the first four-years follow up was shown that the mean frequency of chromatid and chromosome-type aberrations was not significantly different in the whole sample of radiation workers as compared with control groups. Further data have shown a preferential involvement of breakpoints in the interbands between Q and R bands, normal SCE rates and non-random chromosomal involvement superimposable to that found in spontaneous chromosome aberrations of controls. In this paper we present the results obtained during the 1980 cytogenetic study of the same population, the correlations between chromosome aberrations rates and doses of the five years follow up in workers with accumulated doses exceeding 15 rems, and the whole conclusions of our researchers.

18941 Role of leukemogenic viruses in radiation-induced leukemogenesis. Duplan, J.F. (Fondation Bergonie, Bordeaux, France). pp 1111-1114 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The project on the role of leukemogenic viruses in radiation-induced leukemogenesis of the C57BL/6 mouse was undertaken in 1976 with the purpose of analyzing the possible from radiation-induced leukemia.

18942 Comparative studies on various populations of radiation-induced leukemia viruses. Maisin, J.R. (Centre d'Etude de l'Energie Nucleaire, Mol, Belgium). pp 1115-1121 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Two distinct leukemogenic virus isolates were obtained from radiation induced tumors of the C57BL mouse. RadLV/KAAa, isolated by Kaplan and coworkers, is thymotropic and induces thymic lymphomas. RadLV-Rs obtained by Duplan and coworkers, is splenotropic and elicits mixed cell malignant lymphomas (reticulum cell sarcomas). These experimental systems could be considered as good tools to investigate, not nonly some possible relationships between some properties of viral particles and the tissue specificities for the malignant transformation that they induce, but also the possible viral etiology of radiation induced leukemogenesis in mice. A somewhat similar comparative system was obtained following attempts to obtain abundant virus particle production by propagating RadLV-Rs in rats. a virus complex was obtained (BL/F) which could elicit, according to the experimental conditions, either a generalized malignant lymphoma (EL) killing the rats in less than 6 weeks, or a slowly developing leukemia (SL) in the form of either a thymic lymphoma (TL) or a reticulum cell sarcoma (RS). Experience were performed to determine whether this multiple pathogenic effect could be attributed to the occurrence of distinct viral entities in BL/F or to a dose-response effect of one single virus according to the experimental conditions of inoculation. Since the first alternative proved to be correct, we derived clonal isolates from BL/F when feasible, to perform a comparative study of some of their respective properties.

18943 Pilot study of the role of plasminogen activating enzyme in strontium-90 induced tumors in mice. Dano, K. (Copenhagen Univ., Denmark). pp 1123-1126 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Synthesis and release of plasminogen activators seem to be implicated in a variety of physiological and pathological processes involving extracellular proteolysis. A likely function of plasminogen activators in malignant neoplasia is participation in the generation of localized tissue destruction during invasive growth. The aim of the present study is to examine the possible role of plasminogen activators in the growth of radiation induced tumors, by enzymatic and immunohistochemical examination of the occurrence of plasminogen activator in strontium-90 induced tumors in mice, and by an attempt to prevent the occurrence of tumors in mice after strontium-90 treatment, by administration of rabbit antibodies against plasminogen activators. For these studies pure enzyme is necessary for the preparation of specific antibodies in rabbits. We have isolated a clone of cultured mouse 313 cells infected with mouse sarcoma virus. These cells produce 40 fold more plasminogen activator than uncloned cells. The enzyme has been purified and characterized, antibodies with a high degree of specificity have been raised in rabbits, strontium-90 induction of tumors in mice has been started, and techniques for detection of the enzyme in mouse cells by the immune peroxidase procedure have been developed.

18944 Influence of ageing alterations on tumor development after beta-irradiation. Ebbesen, P. (Copenhagen Univ., Denmark). pp 1127-1130 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Ageing influences the tumor development after tissue exposure to carcinogen by providing the time span required by latent periods, by providing time for repeated exposure and time to intrinsic changes in tissue susceptibility to carcinogenic stimuli. The present contract aimed at studying the intrinsic changes in susceptibility to tumor induction by irradiation that might result from ageing. Previous studies had shown that senescent mouse skin was more prone to tumor development after exposure to chemical carcinogen than younger mouse skin. One factor contributing to this age-dependent change in susceptibility could be change in skin content of mitotic inhibitors. We found senescent skin, even when gafted to young mice, to have a reduced content of extractable epidermal mitotic inhibitor. Further study of this mitotic inhibitor, therefore, was included in the project. The initial objectives were (1) to determine if ageing of mouse skin caused a change in susceptibility to the carcinogenic effect of beta-irradiation and (2) to determine if any change in susceptibility to tissue specific mitotic inhibitor. As the project proceeded faster than anticipated we added the third objective, (3) to determine if ageing of mouse skin caused a change in susceptibility to the tumorigenic effect of ultraviolet radiation.

18945 Biological effectiveness of neutron radiation for carcinogenesis. Broerse, J.J. (Radiobiological Inst. TNO, Rijswijk, Netherlands). pp 1131-1134 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Previous studies on mammary tumour induction in several strains of female rats following single dose irradiations with x rays and monoenergetic fast neutrons have been published. In the present program the effects of single dose irradiation are compared with those observed after irradiation in 5 fractions, spaced by one month intervals. The studies have been performed with x rays and 0.5 MeV neutrons, for which the highest RBE values are to be expected. The following groups each consisting of 40 female WAG/Rij rats have been introduced into the program: (a) controls, (b) 200 rad x rays, single dose, (c) 5 x 80 rad x rays at one-fone-month interval, (d) 20 rad 0.5 MeV neutrons, single dose and (e) 5 x 6 rad 0.5 MeV neutrons at one-month intervals.

18946 Decorporation of radionuclides. Kriegel, H. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H., Neuherberg, Germany). pp 1135-1142 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

In this program ^{14}C-labelled crypstand (222) has been synthesized and the pharmacokinetics of this compound studied. The effect of cryptand or ^{133}Ba metabolism is reported. The toxicity of cryptand (222) is also reported. (RJC)

18947 Mobilization and specific decorporation of heavy alkaline earth metals. Vanderborght, O. (Centre d'Etude de l'Energie Nucleaire, Mol, Belgium). pp 1143-1149 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

It was demonstrated that strontium could be mobilized by a chronic treatment with Na-alginate. Even several weeks after ^{85}Sr

injection in mice, when the ^{90}Sr was already fixed in the skeleton, its daily excretion and its concentration in blood could be doubled by treating the animals with Na-alginate mixed with the food. Calcium metabolism of the treated animals was not affected, the urinary ^{90}Sr concentration was somewhat lowered. In addition, the effect of Na-alginate treatment on bone tumor induction in ^{226}Ra contaminated mice was also investigated.

18948 **Exposure to radiation from medical diagnostic procedures general description of work carried out from 1976 to 1980.** Jones, T. (Medical Research Council, London, England). pp 1151-1170 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

A principle means for advancing diagnostic procedures in Medicine lies in formulating methods to observe, non-invasively, the patho-physiological disturbance that occur within tissues of the body. The use of penetrating ionizing radiation offers the opportunity to examine the internal structures of the body. The transmission of photons from an x-ray source provides information on regional tissue density; which is known to change in pathology. The emission of photons from radio-isotopes, introduced into the body to trace specific physiological pathways, provides measurements of local tissue physiology. In turn tissue disturbances are reflected directly in these measurements of function. The information which these transmission and emission procedures provide is unique. However, their diagnostic use needs to be qualified against the resulting radiation doses to the body tissues. The aim of the contract was to assess the value of these methods for examining disease of the brain, heart and lungs. Initially an all encompassing analysis of both emission was planned. However our institute is playing a leading role in the development and use of radionuclide procedures in Medicine. This arises from the Cyclotron facilities that exist for manufacturing radionuclides with the hospital, and the research orientated environment for developing methodology relating to these isotopes. Hence the contract has concentrated on the centre's expertise in the radionuclide applications, since cross reference to radiographic methods can be obtained using reports from many centres equipped with the more common x-ray facilities. The contract deals with methods for studying regional cerebral, cardiac and pulmonary function.

18949 **Exposure to radiation from medical diagnostic procedures.** Donato, L. (Pisa Univ., Italy). pp 1171-1199 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of five proejcts. Project titles are : assessment of current radiation load from medical exposure; exposure to radiations in pulmonary diagnostic procedures; exposure to radiation in cardian diagnostic procedures; exposure to radiations in renal diagnostic procedures; and exposure to radiations in brain diagnostic procedures. Summaries of accomplishments are presented. (RJC)

18950 **Organ and tissue doses in diagnostic radiology: a contribution to the somatic radiation exposure of the population of the Federal Republic of Germany.** Pauly, H. (Erlangen-Nuernberg Univ., Germany). pp 1201-1207 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The following tasks were performed in the program: measurements of the organ and tissue doses and the energy imparted to the body (integral dose) for the most frequently performed x-ray diagnostic examinations; statistical investigations into the number of the x-ray diagnostic examinations in the Federal Republic of Germany; and a contribution to the development and the clarification of the concept: Somatically Significant Dose.

18953 **Repair and induction of chromosome aberrations and point mutations in mammalian somatic cells: a summary and perspective.** Wolff, S. (Univ. of California, San Francisco). pp 367-371 of DNA repair and mutagenesis in eukaryotes. Generoso, W.M.; Shelby, M.D.; deSerres, F.J. (eds.). New York, NY; Plenum Publishing Corporation (1980).

This chapter highlights the chemical nature of the genetic material, and reviews the repair, replication and control of DNA after mutagenesis. In cells of higher organisms, mutagenic chemicals can be studied by cytogenetic methods as well as by studies in somatic cell genetics. The classical cytogenetic study dealt with the induction of chromosome aberrations. In recent years, another type of cytogenetic endpoint, the sister chromatid exchange, has been studied extensively. (KRM)

18954 **Radiation- and drug-induced DNA repair in mammalian oocytes.** Pedersen, R.A.; Brandriff, B. (Univ. of California, San Francisco). pp 389-410 of DNA repair and mutagenesis in eukaryotes. Generoso, W.M.; Shelby, M.D.; deSerres, F.J. (eds.). New York, NY; Plenum Publishing Corporation (1980).

There is now direct and inferential evidence that male and female germ cells of mammals are capable of repairing DNA damage during gametogenesis. In females, repair of UV damage has been observed at all stages of germ cell maturation. The evidence for repair in female mammalian germ cells and in early embryos will be reviewed with particular emphasis on the mouse, the species used in most studies. Indirect evidence for repair capability in oocytes comes from dose-fractionation studies of specific locus mutations and dominant lethal effects. However, we will primarily consider cases in which direct observations of unscheduled DNA synthesis after UV or drug treatment indicate a capacity for excision repair. We will also consider how changing repair capacities compare to sensitivity for mutation induction or cell killing in mammalian oocytes and embryos.

18956 **(AD-A—119856/3) Toxicity studies on antiradiation agents. Final report.** Reno, F.E. (Hazleton Labs. America, Inc., Vienna, VA). Mar 1979. 605p. NTIS, PC A99/MF A01.

This contract was awarded to provide for the conduct of toxicological evaluations on various drugs under study by WRAIR. In general, these acute and subacute studies were designed to evaluate and characterize the pharmacotoxic signs of these drugs to support the IND. Eighteen studies were performed over the period of this contract. WR-2823 (AU 69115) was evaluated for acute oral toxicity by oral intubation to three groups of two male rats each at dosage levels of 100, 1000, and 10,000 mg/kg of body weight (acute oral dose range) in order to more accurately define the toxic range prior to initiating an expanded LD50 study. WR-2823 (AU 69115) was then further evaluated for acute oral toxicity by oral intubation to eight groups of 10 male rats each at dosage levels of 100 to 2150 mg/kg of body weight. The acute oral LD50 was found to be 2037 mg/kg of body weight (confidence limits, 1281 to 3239 mg/kg of body weight). Signs of toxic effect included depression, labored respiration, hunched appearance, diarrhea or brown stains on body, squinting, ptosis, lacrimation, reddened eyes, yellow stain on fur, urine stain, and slight ataxia.

18957 **(AD-A—119992/6) Animal-model studies of radiation-induced emesis and its control. Interim report Jan 75-Jan 81.** Cordts, R.E. (School of Aerospace Medicine, Brooks AFB, TX (USA)). Aug 1982. 17p. NTIS, PC A02/MF A01.

This paper reviews work conducted on the subject of radiation-induced emesis. Emesis is considered primarily as a facet of the prodromal syndrome which indicates that a person may have received sufficient radiation to provoke performance decrement of some degree. The subjects were adult male dogs. Four radiation sources were used, and doses ranged between 140 and 800 rad. An orderly progression of work led to the identification of three drugs that, given together 30 minutes prior to cobalt-60 irradiation, raised the emetic threshold about 90%. One experiment, however, suggested that these same drugs may have little benefit when neutron irradiation is used.

18958 **(AD-A—120008/8) Studies in a rat lung tumor model: cellular biochemistry and cytogenetics. Annual report no. 2, 1 Jul 81-30 Jun 82.** Rasmussen, R.E. (California Univ., Irvine (USA). Dept. of Community and Environmental Medicine). Aug 1982. 25p. NTIS, PC A02/MF A01.

An animal lung tumor model employing intratracheal inoculation of rats with a suspension of 3-methylcholanthrene (MCA) has been used to study induction of 3H-benzo(a)pyrene (3H-BaP) metabolism in lung and liver, and chromosome damage in lung cells. A single inoculation with 1.0 mg MCA increased the enzyme levels in both lung and liver. The enzyme activity in the lung remained above control levels for 8 weeks, and in the liver for more than 2 weeks. Inoculation with 0.1 mg MCA was less effective in both organs. Sister chromatid exchange (SCE) incidence was measured in primary cultures of lung cells from MCA-treated rats. An increased SCE incidence was seen 48 hr posttreatment which persisted for at least 6 weeks after a single treatment with 1.0 mg MCA. Tests for induction of DNA repair synthesis in vivo by MCA (1.0 mg) did not detect evidence of DNA repair.

18959 **(CED—80-111) Indoor air pollution: an emerging health problem.** (General Accounting Office, Washington, DC (USA). Office of the Comptroller General). 24 Sep 1980. 44p. US General Accounting Office, P.O. Box 6015, Gaithersburg, MD 20760.

Report to the Congress.

Traditionally it has been presumed that a person was protected from polluted air when indoors. Recent research has shown, however, that this may not always be true. Various harmful pollutants - including radon, formaldehyde, and nitrogen dioxide - have been found in the air in homes, offices, schools, and even in recreational facilities. The problem may even be made worse by Government energy conservation programs which encourage the buttoning-up of buildings. Federal efforts to deal with the problem have been piecemeal, receiving little support primarily because no one Federal agency has responsibility for the problem. Until responsibility is assigned to one agency to oversee Federal efforts, they will continue to be ineffectual. In this report GAO recommends actions that the Environmental Protection Agency and the Congress can take to help resolve the situation.

18960 **(CONF-8005235—1) Cell-cycle patterns of mutation induction and their relationship to DNA repair.** Goth-Goldstein, R. (California Univ., San Francisco (USA). Radiological Lab.). 1980. Contract AC03-76SF01012. 4p. NTIS, PC A02/MF A01. Order Number DE83006584.

From NATO advanced study institute meeting on chromosome damage and repair; Bergen, Norway (27 May 1980).

From the finding that mutation induction by ethylnitrosourea is cell-cycle independent in synchronous Chinese hamster ovary cells and from the observation that these cells do not excise ^{6}O-alkylguanine, it is concluded that enhanced mutagenesis at growing points, as observed in bacteria and yeast, is due to a repair system which removes mutagenic lesions at sites other than the DNA growing point, where immediate mutation fixation occurs.

18961 (CONF-8006249—, pp 5.1-5.13) **Tolerance and adaptation to acute and chronic hypercapnia in man.** Clark, J.M. Dec 1982. NTIS, PC A06/MF A01.

From Workshop on effects on CO/sub 2/ on mammalian organism; Bethesda, MD, USA (5 Jun 1980).

A series of experiments were conducted to study extensively the rate of respiratory acclimatization to chronic hypercapnia in normal man. Some of the data from three of these sets of experiments will be presented here. In the first experiment, four subjects were exposed to an ambient P/sub CO2/ of 30 mmHg for 11 days; in the second experiment, four different subjects were exposed to the same ambient P/sub CO2/ for 5 days; and the third experiment consisted of a 30-day exposure to four additional subjects to an ambient P/sub CO2/ of 21 mmHg. Each experiment was designed to obtain repeated measurements of ventilation and to obtain acid-base indices of arterial blood and lumbar cerebrospinal fluid (CSF) during hypercapnia.

18962 **(DOE/EV/04477—T4) Paramecium tetraurelia pre-screen for hazardous chemicals: a rapid detector system for health hazards. 1977-1983 report.** Smith-Sonneborn, J. (Wyoming Univ., Laramie (USA). Dept. of Zoology and Physiology). 1983. Contract AC02-77EV04477. 20p. NTIS, PC A02/MF A01. Order Number DE83007261.

The purpose was to develop and validate a new eukaryotic bioassay system applicable to rapid identification of environmental toxins, mutagens, and carcinogens. The ability of Paramecium to detect potential health hazards, associated with complex environmental mixtures, was demonstrated in association with the finest coal fly ash particles and aqueous waste streams from both oil shale and coal gasification developing technologies. In Paramecium, the cytotoxicity of an agent was determined by altering the survival and/or growth rate of single cells in test agents. Genotoxicity was assayed by a two-tiered approach, utilizing both the Paramecium system and the more established Ames Salmonella assay for mutagen/carcinogen detection. An agent was considered genotoxic in Paramwecium if altered phenotypes were induced in the fertilization progeny of treated parent cells. Since others had shown a significant correlation between agents which were photodynamically active in Paramecium and carcinogenic in mammals, the photodynamic activity versus carcinogenicity of agents was reviewed. Photodynamically active compounds are defined by the immobilization of cells when exposed to both the test agent and black light; neither the agent alone nor light alone affects swimming activity.

18963 **(DOE/EV/10566—5) Mechanisms of mutagenesis: analysis through the use of alcohol dehydrogenase in Drosophila. Progress report, February 1982-January 1983.** Sofer, W.H. (Rutgers--the State Univ., Piscataway, NJ (USA). Waksman Inst. of Microbiology). Jan 1983. Contract AC02-81EV10566. 8p. NTIS, PC A02/MF A01. Order Number DE83006976.

It has been shown that: (1) one EMS-induced, ADH-negative mutant called CyO/sup nB/, has a single base change - an AT to a GC bp - that results in the production of a premature termination codon in th ADH gene; (2) all formaldehyde-generated Adh mutants detected to date are deletions, most large enough to affect genes outside of the Adh locus as well as Adh; (3) four formaldehyde-generated mutants, though originally to be point mutants, were found, by DNA sequencing, to be small deletions ranging in size from 6 to 34 base pairs (bp) in length; and (4) three of these small deletions were found to occur between two bp direct repeats, and two bore, in addition to the deletions, additional changes adjoining the deleted DNA.

18964 **(K—2038) Determination of methylmercury in fish by selective-reduction cold-vapor atomic-absorption spectrophotometry.** Stiff, A.C. (Oak Ridge Gaseous Diffusion Plant, TN (USA)). Feb 1983. Contract W-7405-ENG-26. 23p. NTIS, PC A02/MF A01. Order Number DE83007175.

A procedure is described for the determination of methylmercury in fish tissue using selective-reduction cold-vapor atomic-absorption spectrophotometry. The detection limit of 50 ng/g is reported for methylmercury in fish by this procedure.

18965 **(LA—9627-MS) Preliminary toxicological study of ferric acetyl acetonate.** London, J.E.; Smith, D.M. (Los Alamos National Lab., NM (USA)). Jan 1983. Contract W-7405-ENG-36. 7p. NTIS, PC A02/MF A01. Order Number DE83007117.

The calculated acute oral LD_{50}^{30} (lethal does for 50% of the animals occuring with 30 days after compound administration) values for ferric acetyl acetonate were 584 mg/kg in mice and 995 mg/kg in rats. According to classical guidelines, this compound would be considered slightly toxic in both species. Skin application studies in the rabbit demonstrated the compound to be irritating. The eye irritation study disclosed the compound to be a severe irritant causing permanent damage to the cornea (inflammation and scarring resulting in blindness). The sensitization study in the guinea pig did not show ferric acetyl acetonate to be deleterious in this regard.

18966 **(LA—9628-MS) Toxicological study of the high explosive formulation X-0298.** London, J.E.; Smith, D.M. (Los Alamos National Lab., NM (USA)). Jan 1983. Contract W-7405-ENG-36. 5p. NTIS, PC A02/MF A01. Order Number DE83007124.

The acute oral LD_{50} values for the high-explosive formulation X-0298 for mice and rats is greater than 5 g/kg. According to classical guidelines, the mixture would be considered only slightly or practically nontoxic in both species. Skin application studies in the rabbit with X-0298 demonstrated that it was cutaneously nonirritating. This material was also nonirritating in rabbit eye application studies. The sensitization study in the guinea pig did not show X-0298 to be deleterious in this regard.

18967 **(LMF—98) Pulmonary effects of acid sulfate inhalation in the guinea pig.** Silbaugh, S.A.; Mauderly, J.L.; Wolff, R.K.; Carpenter, R.L.; Brownstein, D.G.; Harkema, J.R.; Rothenberg, S.J. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst.). Jul 1982. Contract AC04-76EV01013. 19p. NTIS, PC A02/MF A01. Order Number DE83007111.

Guinea pigs were exposed by inhalation for 1 to 8 hours to sulfuric acid aerosols of various sizes and concentrations in order to provide quantitative information for standards setting. The effects of sulfuric acid aerosols were examined to determine acute mortality, changes in respiratory function and morphology, response mechanisms, differences in individual sensitivity and changes in airway response to bronchoconstrictors. An aerosol generator for another sulfur-containing pollutant, ammonium bisulfite, was developed for use in animal exposures. Also, lung lesions which simulate human emphysema were produced by intratracheal elastase instillation to investigate a potential impaired animal model for sulfur pollutant exposures. Pulmonary mechanics, lung morphology, and histamine sensitivity data all suggest that the guinea pig reacts to sulfuric acid aerosols with a nearly all-or-none airway constrictive response. Results also indicate that the concentration at which this response occurs is affected by aerosol size, exposure profile and individual animal sensitivity. No acute pulmonary function changes were noted at concentrations below 15 mg/m³. The reason for these differences is unknown.

18968 **(LMF—99) Lung-clearance mechanisms following inhalation of acid sulfates.** Wolff, R.K.; Muggenburg, B.A.; Silbaugh, S.A.; Carpenter, R.L.; Rowatt, J.D.; Hill, J.O. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst.). Aug 1982. Contract AC04-76EV01013. 30p. NTIS, PC A03/MF A01. Order Number DE83007113.

These studies have indicated that acute exposures (1-6 hrs) to sulfuric acid at levels of 0.5 to 1.0 mg/m³ can produce impairments in mucous clearance. The impairments can last for up to a week following a 1 hr exposure. These effects and studies by others suggest that high sulfate levels in polluted conditions may be one factor in observed increases of hospital visits for respiratory problems. Long term exposures to elevated levels of sulfates resulting in decreases of clearance could also be an initiating factor in producing chronic obstructive pulmonary disease (COPD). These studies have also shown that it is the larger size fraction (0.6 to 1.0 μm) of sulfuric acid mist in the urban aerosol which is predominantly responsible for at least the acute effects.

18969 **(LMF—100) Cytogenetic studies of lung cells following inhalation of fly ash, chemical mutagens, and effluents from power-related industry.** Brooks, A.L. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst.). Aug 1982. Contract AC04-76EV01013. 54p. NTIS, PC A04/MF A01; 1. Order Number DE83007112.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

To evaluate the potential health effects of airborne pollutants we have (1) developed systems to expose animals to aerosols, (2) measured genetic change in animals after in vivo exposure, (3) measured genetic change induced in well-developed in vitro cell systems and (4) developed model cell systems from the respiratory tract for use in toxicology testing. Exposure systems were developed to expose rodents to benzo(a)pyrene (B(a)P) aerosols. Chinese hamsters were exposed by inhalation to the B(a)P aerosol and deposition, retention and dose were determined. Chromosome aberrations and sister chromatid exchanges (SCEs) were measured in the bone marrow, in liver and in cells recovered by lung lavage. To test complex mixtures we used three endpoints: cell killing, sister chromatid exchange and mutation induction. These endpoints were measured in vitro in CH cells for a range of known mutagens and for complex mixtures. Since lung and tracheal cells are the target cells for inhalation exposure, in vitro model systems for these cells were developed. Primary lung cell cultures were used to detect the frequency of spontaneous and induced SCEs in the lung following exposure to either direct or indirect acting mutagens. Tracheal epithelial cells can grow on a collagen gel substrate. These rapidly growing cells provide a second useful model. The cells were evaluated for changes in morphologyand collagenase activity following treatment with tumor promoters 12-O-tetradecanoyl-phorbol-13-acetate (TPA) and phorbol-12,13-didecanoate (PDD). We developed and characterized a type II lung epithelial cell (LEC) line. This model cell system can synthesize surfactant and activate promutagens. The morphological and karyotypic characteristics were determined. Lung epithelial cells grow on an air/collagen interface and thus can be used to test the toxicity of gaseous pollutants. The cells were exposed to NO_2 and cell killing response evaluated.

18970 **(LMF—101) Respiratory toxicology following inhalation of NO/sub x/.** Pickrell, J.A.; Gregory, R.E.; Johnson, W.K.; Hahn, F.F.; Bice, D.E.; Henderson, R.F.; Hobbs, C.H. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst.). Aug 1982. Contract AC04-76EV01013. 31p. NTIS, PC A03/MF A01. Order Number DE83007110.

Pulmonary responses observed in rats, hamsters and dogs after acute or subacute exposure to various concentrations of nitrogen dioxide (NO_2) are reported. Acute exposure of rats and ham-

sters to moderate levels of NO_2 (5 to 30 ppM) produced alveolar type II cell hyperplasia indicative of type I cell death, pulmonary alveolar macrophage proliferation and increased membrane lipid production in isolated type II cells. Also observed were pulmonary inflammation and edema, increased humoral and cellular immune response after instillation of antigen and elevated biochemical indicators of lung epithelial cell injury or death and adaptation or recovery. In contrast to the response in exposed rodents, dogs exposed acutely to high levels of NO_2 (~ 70 ppM) showed no type I cell death or type II cell hyperplasia, but bronchiolar and type II cell degeneration. Since the dog and human lung are similar anatomically, the dog may represent a better model for human NO_2 exposure. Rats exposed chronically for up to 2 months to a moderate level (~ 20 ppM) of NO_2 extensive pulmonary injury initially (peak response at 0.5 to 1 week of exposure), identical to that observed in the acute exposures. However, after 2 months of exposure, the rats had recovered from the initial injury except for increases in tissue collagen and mean intercepts that persisted for up to 10 months after exposure. These changes may be indicators of developing chronic lung injury. Rats exposed to low level NO_2 (1 to 5 ppM) for 2.5 months showed a very mild and delayed (peak response at 2 to 4 weeks of exposure) pulmonary injury. After 2.5 months of exposure all biochemical indicators of injury had resolved. However, areas of minimal focal hyperinflation and macrophage accumulation persisted.

16971 (NP—2902584) Acid precipitation: effects on forest and fish. Final report. Overrein, L.N.; Seip, H.M.; Tollan, A. (Norges Landbrugshoegskole, Aas. SNSF-prosjektet). Dec 1980. 177p. NTIS (US Sales Only), PC A09/MF A01; 1. Order Number DE82902584.

Portions are illegible in microfiche products.

This interdisciplinary research program was launched in 1972 in response to concern in Scandinavian countries that acid precipitation was causing changes to the natural environment. A major hypothesis was that anthropogenic release of sulfur oxides and other pollutants may alter geobiochemical and biochemical cycles with consequences for the biota. The main research efforts were directed towards possible threats to forest and freshwater fish. Results of the entire program are summarized. Information is presented under the following section headings: emissions and transport; atmospheric deposits in Norway; water acidification - status and trends; chemical modifications of precipitation in contact with soil and vegetation; snow and snowmelt; land-use changes and acidification; effects of acid precipitation on soil productivity and plant growth; and effects of acid water on aquatic life.

16972 (NP—2902787) Biological characteristics of pulp mill effluents. Part 1. Progress report to March 31, 1978. (B.C. Research, Vancouver (Canada)). 1978. 45p. NTIS (US Sales Only), PC A03; 3. Order Number DE82902787.

Paper copy only, copy does not permit microfiche production.

A list of organic substances known to occur in pulp and paper mill effluents was prepared and screened against known or suspected carcinogens. Compounds with potential carcinogenic properties were identified and listed separately. Three organic substances known to be carcinogenic reportedly occur in pulp mill effluents: safrole, chloroform and carbon tetrachloride. These substances are present in effluents at very low concentrations. They are considered as procarcinogens; i.e. upon contact with liver enzymes they are metabolized to active carcinogens. Numerous compounds were identified which are suspected of being procarcinogens or of being tumor promoters. Swedish scientists demonstrated the presence of mutagenic materials in chlorination stage effluents, using the Salmonella/microsome (Ames) test. The mutagenic material was biodegradable and could be destroyed by biological treatment. With the chemical structure of carbon tetrachloride, the concern relating to trichlorofluoromethane is self evident.

16973 (NP—3901060) Calculation of the uptake of CO into the human blood. Zankl, J.G. (Technische Univ., Graz (Austria). Inst. fuer Verbrennungskraftmaschinen und Thermodynamik). 1981. 78p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83901060.

CO is a toxic substance mainly because, due to its high hemoglobin affinity, it inhibits oxygen transport in the human blood. This process must be quantified in order to establish limiting CO concentrations for garages, road tunnels, places of work, and for purpose of accident analysis. The medical information given is based on literature and is considered only as an introduction for non-experts. The emphasis of the work was on the development of a computer program by which the influence also of variable air CO concentrations and sea levels can be calculated. The program is available at the author's institute along with detailed calculations and results not considered in this publication.

16974 (PB—82-126285) Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops. Lee, J.J.; Neely, G.E.; Perrigan, S.C.; Grothaus, L.C. (Environmental Protection Agency, Corvallis, OR (USA). Environmental Research Lab.). 1 Oct 1980. 17p. (EPA—600/J-81-401). NTIS.

This study was designed to reveal patterns of response of major United States crops to sulfuric acid rain. Potted plants were grown in field chambers and exposed to simulated sulfuric acid rain (pH 3.0, 3.5 or 4.0) or to a control rain (pH 5.6). At harvest, the weights of the marketable portion, total aboveground portion and roots were determined for 28 crops. Of these, marketable yield production was inhibited for 5 crops (radish, beet, carrot, mustard greens, broccoli), stimulated for 6 crops (tomato, green pepper, strawberry, alfalfa, orchardgrass, timothy), and ambiguously affected for 1 crop (potato). In addition, stem and leaf production of sweet corn was stimulated. Visible injury of tomatoes might have decreased their marketability. No statistically significant effects on yield were observed for the other 15 crops. The results suggest that the likelihood of yield being affected by acid rain depends on the part of the plant utilized, as well as on species. Effects on the aboveground portions of crops and on roots are also presented. Plants were regularly examined for foliar injury associated with acid rain. Of the 35 cultivars examined, the foliage of 31 was injured at pH 3.0, 28 at pH 3.5, and 5 at pH 4.0. Foliar injury was not generally related to effects on yield. However, foliar injury of swiss chard, mustard greens and spinach was severe enough to adversely affect marketability.

16975 (PB—82-225038) Cadmium and endrin toxicity to fish in waters containing mineral fibers. Carlson, A.R.; Tucker, J.A.; Mattson, V.R.; Phipps, G.L.; Cook, P.M. (Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab.). May 1982. 36p. NTIS, PC A03/MF A01.

Taconite tailings and their component asbestiform minerals in Lake Superior water had no demonstrable effect on the chronic toxicity of cadmium to the flagfish, Jordanella floridae. Maximum acceptable toxicant concentrations determined in life cycle tests, where effects on survival, growth, reproduction, and bioconcentration were used as endpoints, were between 3.3 to 7.4, 3.0 to 6.5, and 3.4 to 7.3 micrograms cadmium/liter at 0.004, 0.08, and 0.95 mg/liter taconite tailings concentrations, respectively.

16976 (PB—82-227174) Chronic inhalation exposure of rats, rabbits, and monkeys to 1,2,4-trichlorobenzene. Conte, W.B.; Schoenfisch, W.H.; Busey, W.M.; Lewis, T.R. (Hazleton Labs., Vienna, VA (USA)). 1972. 30p. NTIS, PC A03/MF A01.

The toxic effects of chronic inhalation exposure to 1,2,4-trichlorobenzene (120821) (TCB) were investigated. Charles-River-rats, New-Zealand-White-rabbits, and cynomolgus-monkeys were exposed for up to 26 weeks to 25, 50, or 100 parts per million of TCB. Body weights and hematologic and serum biochemistry were tested in each species, pulmonary function and operant behavior were tested in monkeys, and ophthalmologic tests were performed in rabbits and monkeys. All animals were autopsied after exposure. The only exposure related changes were increases in the size of hepatocytes and degeneration of the inner zone of the renal cortex in rats after 4 or 13 weeks of exposure. The authors recommend reevaluation of the maximum allowable TCB concentration, and additional short term, low dose studies with other species.

18977 (PB—82-227372) Carcinogen assessment group's final report on population risk to ambient benzene exposures. Final report. Albert, R.E. (Environmental Protection Agency, Research Triangle Park, NC (USA). Office of Air Quality Planning and Standards). Jan 1979. 46p. NTIS, PC A03/MF A01.

This report is one of three reports which were prepared by Environmental Protection Agency to determine what regulatory action should be taken by E.P.A. to control sources of atmospheric emissions of benzene. This report estimates from three epidemiological studies the leukemia risk associated with current general population exposures to benzene in the United States.

18978 (PB—82-241670) Preliminary air pollution survey of beryllium and its compounds: a literature review. Durocher, N.L. (Litton Systems, Inc., Bethesda, MD (USA)). Oct 1969. 91p. NTIS, PC A05/MF A01.

This is a survey of the reported data on the effects of beryllium or its compounds on humans or animals. Inhalation of beryllium can cause a body-wide systemic disease, with pulmonary damage being of major concern, as well as the possibility of its effect as a carcinogen. This review outlines the effect of beryllium on humans, animals, plants, and materials. It also describes the following sources of this pollutant: natural occurrences, production sources, product sources, and others. There is a discussion of the efforts to reduce beryllium concentrations and the economic costs. The sampling and quantitative methods of analysis are also described. Bibliography.

18979 (PB—82-247941) Geographical and temporal distribution of atmospheric mutagens in California. Final report 10 Dec 79-9 Mar 81. Pitts, J.N. Jr; Fitz, D.R.; Harger, W.; Lokensgard, D.M.; Shaffer, S.D. (California Univ., Riverside (USA). Statewide Air Pollution Research Center). Nov 1981. 177p. NTIS, PC A09/MF A01.

A program designed to reveal factors influencing the diurnal variation and geographical distribution of airborne particulate mutagenicity in the South Coast Air Basin (SCAB) and to establish current 'baseline' levels for this mutagenicity was conducted using the Ames Salmonella/mammalian microsome assay. Ambient particles were collected simultaneously at several sites across the SCAB using collection periods shorter than the standard 24 hours. Collections were made every 12 hours for a 72-hour period in winter 1980, and every three hours for a 24-hour period in late summer 1980 and early spring 1981.

18980 (PB—82-922913) Phorbol ester action in cell culture. Oncology overview. (National Cancer Inst., Bethesda, MD (USA). International Cancer Research Data Bank). Oct 1982. 150p. NTIS PC $7.25/MF $3.00.

Oncology Overviews are a service of the International Cancer Research Data Bank (ICRDB) Program of the National Cancer Institute, intended to facilitate and promote the exchange of information between cancer scientists by keeping them aware of literature related to their research being published by other laboratories throughout the world. Each Oncology Overview represents a survey of the literature associated with a selected area of cancer research. It contains abstracts of articles which have been selected and organized by researchers associated with the field. Contents: The effects of phorbol esters on DNA synthesis and DNA repair; The effects of phorbol esters on cell membranes, prostaglandin metabolism and cellular transport mechanisms; The specific binding of phorbol esters to membrane receptors and other cellular components; The induction of plasminogen activator by phorbol esters; The induction of ornithine decarboxylase activity by phorbol esters;The effects of phorbol esters on other biochemical aspects of cell cultures; The effects of phorbol esters on growth factor interactions with cells in culture; The metabolism of phorbol esters in cell cultures; The modification by retinoids of phorbol ester action in cell cultures; The effects of phorbol esters on immunocompetent cells, in vitro; The effects of phorbol esters on cell-virus interactions; The effects of phorbol esters on cell transformations; The effects of phorbol esters on mutation and sister chromatid exchange frequencies; The effects of phorbol esters on cell differentiation; The effects of phorbol esters on cell proliferation; Reviews of the effects of phorbol esters in cell cultures.

18981 (PB—83-112151) The effect of water chlorination on the toxicity of copper to phytoplankton. Final report. Sanders, J.G. (Maryland Univ., Solomons (USA). Chesapeake Biological Lab.). Jun 1982. 78p. NTIS, PC A05/MF A01.

The application of chlorine to estuarine waters usually results in oxidation of a finite quantity of organic carbon, averaging 35 micrometers. The oxidation may be salinity dependent; with one exception, all samples of >5/00 salinity showed a loss of carbon. The quantity of carbon oxidized is independent of the concentration of chlorine added, suggesting that only some compounds are attacked and oxidized. In every case, the quantity of carbon associated with the smallest molecular weight fraction increased after chlorination, likely because of scission of macromolecules. Copper distributions within various size fractions of natural organics did not change significantly after chlorination. The quantity of carbon oxidized is small in comparison to the total complexation capacity of estuarine waters. Bioassays of relative copper toxicity in control and chlorinated water were hampered by the extreme effect of the chlorine itself. Even after 35 days, enough chlorine residuals were present to impede growth of all but the most resistant algal species. Chemical dechlorination was unsuccessful because of copper complexation reactions.

18982 (PB—83-113407) Tier II mutagenic screening of 13 NIOSH priority compounds, individual compound report 2-methoxyethanol. McGregor, D.B. (Inveresk Research International Ltd., Musselburgh (UK)). 1 Nov 1980. 237p. NTIS, PC A11/MF A01.

The Tier II mutagenic screening of 2-methoxyethanol (109864) is discussed. The properties, human exposure and toxicology of the compound are reviewed. The chemicals, animals, animal management and atmosphere generation, are described. The methods for DNA synthesis assay, cytogenetic analysis of rat bone marrow cells, dominant lethal testing, sperm abnormality analysis, sex linked recessive lethal test and statistical evaluation are discussed. Results of these analysis are presented. The author concludes that 2-methoxyethanol has a profound effect upon male fertility but does not induce chromosomal aberrations in rat bone marrow. Also, it is recommended that more detailed studies of the effects upon testicular cells be conducted to reach an understanding of the dominant lethal test and sperm abnormality test results.

18983 (PB—83-113639) Third annual report of health activities under the Federal Mine Safety and Health Act of 1977. (National Inst. for Occupational Safety and Health, Cincinnati, OH (USA)). Feb 1981. 55p. NTIS, PC A04/MF A01.

The federal mine health program in 1980 is discussed. Health hazard evaluations were completed for exposure to crystalline silica (7631869), oil shale, perchloroethylene (127184), and heat stress. A report from the coal workers health surveillance program is presented. Mine health research projects are reported on diesel exhausts, vibration, manual materials handling, coal workers pneumoconiosis, new miner studies, stomach cancer, metal toxicity on lung cells, lipid peroxidation, and diesel and metal particulates effects on interferon synthesis. Criteria documentation, standards development, and related research on radon daughters, heat stress, asbestos, silica, welding fumes, mine sanitation, and emergency medical services are reported. Respirators, personal dust samplers, and other safety equipment testing and certification are reported and mine health education programs are presented. This report represents an effort by NIOSH to identify, evaluate, and control work related disease among miners.

18984 (PB—83-114264) Human epithellial cell activation systems. Final report. McCormick, J.J. (Michigan State Univ., East Lansing (USA). Carcinogenesis Lab.). Oct 1982. 38p. NTIS, PC A03/MF A01.

Much effort has been placed on the development of short-term assay systems that use the induction of mutations in bacterial and mammalian cells as the basis for predicting the carcinogenicity of environmental chemicals. However, evidence has accumulated that suggests that most environmental chemicals require enzymatic activation to produce metabolites that will react with cellular ma-

cromolecules, and many or the bacterial and mammalian cell lines identified are unable to produce that activation. Consequently, scientists began to use microsomal systems to supply activation. In this study, two short-term assays were examined and cells that appeared capable of metabolizing various carcinogens were identified. In the first method, the metabolism of tritiated benzo(a)pyrene (B(a)P) to aqueous-acetone soluble products was measured. While this method is useful to identify cells that are capable of metabolizing B(a)P or related compounds, it is not applicable to other classes of compounds. Therefore, a second, more general method was examined. This second method detects the formation of agents that damage DNA by measuring DNA synthesis inhibition after exposure to a carcinogen.

18985 **(PB—83-116913) Effects of 200, 591 and 2450 mhz microwaves on cerebral energy metabolism.** Sanders, A.P.; Joines, W.T. (Duke Univ., Durham, NC (USA). Medical Center). Oct 1982. 72p. NTIS, PC A04/MF A01.

Earlier work has shown that levels of key biochemicals in the energy production system of rat brain are affected by exposure to 591 MHz microwave radiation at 13.8 mW/sq cm. The objectives of this study were to determine whether there are direct microwave effects on the biological system or whether they are secondary to the hyperthermia produced in the tissue, to establish dose-response relationships for the effects, and to investigate different frequencies of exposure and modulation of the carrier signal. The fluorescence of reduced nicotinamide adenine dinucleotide (NADH) in the rat brain was measured in vivo during exposure to the microwave radiation, and adenosine triphosphate (ATP) and creatine phosphate (CP) levels were measured chemically after exposure.

18986 **Pathogenesis of lesions induced in rat lung by chronic tobacco smoke inhalation.** Heckman, C.A.; Dalbey, W.E. *Journal of the National Cancer Institute;* **69**: No. 1, 117-129(Jul 1982). Contract W-7405-ENG-26.

Lesions were induced in the lungs of specific-pathogen-free F344 rats by chronic tobacco smoke exposure. Animals exposed to 7 cigarettes/day were killed after 1, 1.5 or 2 years of exposure. Parallel lifetime exposures induced pulmonary tumors in 9% of the animals. In serially killed animals, four types of lesions were found: (1) perivascular or peribronchiolar accumulation of lymphoreticular cells; (2) fibrotic and cellular enlargement of peribronchiolar septa; (3) type II cell hyperplasia with septal fibrosis; and (4) air-space enlargement (emphysema). However, emphysema occurred only in animals exposed to a higher (10 cigarettes) dose of tobacco smoke. Ultrastructural studies showed all of the focal lesions to be infiltrated by cells typical of the inflammatory response. The type II hyperplastic and peribronchiolar alveolar lesions involved larger portions of the parenchyma in fibrotic changes but differed in structure, location, and frequency. The incidence of the peribronchiolar alveolar lesions was temporally related to tumor incidence.

18987 **Assessment of the effects of acrylamide, methylmercury, and 2,5-hexanedione on motor functions in mice.** Gilbert, S.G.; Maurissen, J.P.J. (Univ. of Rochester School of Medicine and Dentistry, NY). *Journal of Toxicology and Environmental Health;* **10**: 31-41(1982). Contract AC02-76EV03490.

Neurotoxic effects of acrylamide, methylmercury, and 2,5-hexanedione were studied in forty female BALB/c mice. Motor functions were quantified by measuring landing foot-spread and rotarod performance. Baseline data were collected before dosing started. Mice were placed, twice weekly, on an accelerating rotarod, and their retention time was recorded. Decreased retention time and increased hindlimb splay were observed in mice after 12 d of exposure to acrylamide. Recovery followed treatment cessation. Increased hindlimb splay preceded an obvious decline of rotarod performance in the group receiving the 10 ppM of methylmercury solution. Mice receiving the 20 and 40 ppM of methylmercury solutions did not display any change in these tests before overt signs of toxicity. 2,5-Hexanedione produced a small decline in performance to a constant level after 85 d of exposure. After dosing termination, performance returned to baseline values. Control groups showed no change in performance on either the rotarod or the landing foot-spread test. Our data show that the rotarod and hindlimb splay tests in mice are about equal in sensitivity to the effects of the neurotoxic chemicals tested.

18988 **Microanalysis of ozone depression of motor activity.** Tepper, J.L.; Weiss, B.; Cox, C. (Univ. of Rochester, NY). *Toxicology and Applied Pharmacology;* **64**: 317-326(1982). Contract AC02-76EV03490.

Ozone, the principal oxidant in photochemical smog, impairs athletic performance and induces complaints of fatigue and lethargy. It also reduces motor activity in rodents. A detailed analysis of this finding was attempted. Eight male Long-Evans rats were housed in cages attached to running wheels located within a 2-m^3 exposure chamber. Each revolution of a wheel closed a switch with the time between switch closures recorded by an attached computer. The rats were exposed for 6-hr periods during the nocturnal phase of their light cycle to ozone concentrations of 0.12, 0.25, 0.50, and 1.0 ppM. Ozone produced initial decrements in the number of revolutions and a progressively greater decrease with continued exposure. Statistically significant depression took place at 0.12 ppM. analysis of the individual components of wheel running revealed differential susceptibility to ozone. After termination of exposure to low concentrations of ozone, animals showed increased running. At the higher concentrations, running remained suppressed below control values for several hours. A new multivariate graphical technique, the biplot, is presented as a way to simultaneously display the relationships among many complex variables.

18989 **Genetic lesions produced by radiation and chemical pollutants and their repair. Qualitative and quantitative comparisons in order to obtain rad-equivalents.** Latarjet, R. (Institut du Radium, Paris, France). pp 545-556 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The interactions between the nuclear and the mitochndrial genomes for the repair of radiation-induced lesions as well as the fate of mitDNA after several conditions of treatment were studied both genetically and biochemically. Also studied were the genetic activity of mono-and bi-functional furocoumarins, the effects of dose-rate, and the evaluation of rad-equivalents. (RJC)

18990 **Consequences of radiation exposure: prevention and treatment of pathological effects.** Garattini, S. (Istituto di Ricerche Farmacologiche, Milan, Italy). pp 775-779 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The effects of radiommimetic cytotoxins on the various subpopulations of the immune system in mice were investigated. The therapeutic use of these agents in bone marrow transplantations is discussed. In addition, the mode of actions of novel immunostimulatory agents are characterized. The currently available agents with such activity are not satisfactory because of their toxicity. Several new compounds which demonstrate therapeutic effects are described.

5604 Other Environmental Pollutant Effects

18991 **(AD-A—119731/8) Laser irradiation of SV40 DNA. Technical report.** Johnson-Thompson, M.; Halpern, J.B.; Jackson, W.M.; George, J. (Howard Univ., Washington, DC (USA). Dept. of Chemistry). 17 Sep 1982. 18p. NTIS, PC A02/MF A01.

Simian virus 40 DNA was irradiated by a high intensity ArF excimer laser. Analysis by gel electrophoresis, neutral sucrose gradient analysis, and alkaline sucrose gradient analysis showed that the laser irradiation leads to breaking of the sugar phosphate backbone in a sequential manner at random sites. The causitive process is either attack by laser generated free radicals or two photon direct scission.

18992 **(PB—82-226853) Biological effects of nonionizing electromagnetic radiation: a digest of current literature, October thru December 1981. volume VI, number 2.** Kleinstein, B. (Science Information Services, Inc., Philadelphia, PA (USA)). Apr 1982. 121p. NTIS, PC A06/MF A01.

This digest is issued quarterly to provide current awareness information on biological effects and health implications of microwave and other radio frequency radiation. The effects of electric and magnetic fields (static and alternating) and research on medical applications of these nonionizing electromagnetic radiations are also included. Each issue contains abstracts of current English and foreign-language research literature, research summaries, news items and announcements and information on relevant meetings and conferences. Subject and author indices are provided for all literature abstracts to facilitate specific search and reference use.

18993 **(PB—82-227166) Survey report on rf radiation exposures from heat sealers at Beaverite Products, Inc., Beaver Falls, New York. Industrywide study.** Cox, C.; Conover, D.L.; Murray, W.E. Jr; Baum, B.E. (National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Div. of Surveillance, Hazard Evaluation and Field Studies). May 1980. 33p. NTIS, PC A03/MF A01.

The effect of radiofrequency (RF) radiation exposures from heat sealers was investigated in workers in a polyvinyl chloride and vinyl acetate production facility (SIC-2821). The RF radiation exposure of 16 operators at 8 heat sealers were measured. Six of eight heat sealers generated incident radiation fields in excess of the current 10 milliwatts per square centimeter OSHA standard. Thirteen of the 16 operators were exposed to incident radiation fields in excess of the current radiation standards of 200 volts per meter and 0.5 amperes per meter for electric and magnetic field intensities, respectively. The authors recommend that appropriate shielding be installed on the RF heat sealers.

18994 **(PB—82-235045) An overview of United States activities for nonionizing electromagnetic radiation safety. Final report.** Clark, H.E. (National Bureau of Standards, Washington, DC (USA)). Dec 1980. 26p. Pub. in Proceedings of 'The Washington Impact: How It Affects Microwave Users', Washington, DC, November 13-14, 1980, p34-60.

The speech provides a review of the overall U.S. Government Program of Nonionizing Electromagnetic Radiation (NER) Safety including: the goal and rationale of that program, the strategy for achieving it, identification of nearly all organizations (Federal or private) which have a role in assuring NER safety, and listing of all Federal and state exposure standards.

18995 **(PB—82-240540) Management of transmission line rights-of-way for fish and wildlife. Volume 1: background information. Final report.** Galvin, M.; Hoover, K.D.; Avery, M.L. (Asplundh Environmental Services, Willow Grove, PA (USA)). Oct 1979. 191p. NTIS, PC A09/MF A01.

The report, volume 1, of the three-part set contains background information on wildlife management and vegetation maintenance on rights-of-ways (ROW) dealing with the Eastern U.S. and Western U.S. respectively. A step-by-step discussion for the use of the manual is given. The report also contains a basic review of the ROW siting and construction process; discusses various practices used to acquire a ROW and feasibility and practicality of implementing wildlife management strategies under various landownership situations.

18996 **(PB—82-240557) Management of transmission line rights-of-way for fish and wildlife. Volume 2: Eastern United States. Final report.** Galvin, M.; Hoover, K.D.; Avery, M.L. (Asplundh Environmental Services, Willow Grove, PA (USA)). Oct 1979. 368p. NTIS, PC A16/MF A01.

This report, volume 2, of the three-volume set, contains ecological information on selected plant and wildlife species and responses of various plant species to vegetation maintenance practices in the Eastern United States. It provides information on sprouting, reaction to competition and other factors that determine plant responses to disturbances. Included also is a discussion of the characteristics of certain mammal, bird, and amphibian and reptile species that should be given special consideration in Right of Way management planning.

18997 **(PB—82-240565) Management of transmission line rights-of-way for fish and wildlife. Volume 3: Western United States. Final report.** Galvin, M.; Hoover, K.D.; Avery, M.L. (Asplundh Environmental Services, Willow Grove, PA (USA)). Oct 1979. 543p. NTIS, PC A23/MF A01.

The report, volume 3, of the three-volume set, contains ecological information on selected plant and wildlife species and responses of various plant species to vegetation maintenance practices in the Western United States. The study provides information on sprouting, reaction to competition and other factors that determine plant responses to disturbances. The report also presents plant species associated with general plant communities for each province, and when appropriate, for each section or subsection based on Bailey's ecosystems. Description of ecological characteristics are also given for each plant. Included also is a discussion of the characteristics of certain mammal, bird, and amphibian and reptile species that should be given special consideration in Right of Way management planning.

18998 **(PB—83-110718) Human reactions to ELF electric and magnetic fields - an annotated bibliography of current literature - 2nd edition.** Reilly, J.P. (Johns Hopkins Univ., Laurel, MD (USA). Applied Physics Lab.). Jul 1982. 75p. NTIS, PC A04/MF A01.

This annotated bibliography lists current literature (since 1960) which applies to human reactions to electric and magnetic fields from 10 hz to 100 hz, with an emphasis on power frequency fields. This includes direct experimental work with humans, epidemiological studies, work which use animal studies to draw interferences about human reactions, studies concerning human dosimetry, and works which discuss means for human protection. This volume is an updated version of an earlier bibliography, published in July 1981.

57 HEALTH AND SAFETY

REFER ALSO TO CITATION(S) 18617, 18839

18999 **(GPO—85-397) National toxicology program.** (Committee on Science and Technology (U.S. Congress. House), Washington, DC Subcommittee on Energy Research, Development and Demonstration (Fossil Fuels)). 1981. 189p. Subcommittee on Investigations and Oversight of the Committee on Science and Technology, 97th Congress, 1st Session, Washington, D.C.

GPO Hearing before the Subcomm. on Investigations and Oversight of the Comm. on Sci. and Technol., 97th Congr., 1st Sess., No. 32, 15 Jul. 1981.

The activities, plans, and priorities of the national toxicology program are discussed. The aim of the program is to develop through research the scientific information needed to protect the public health from damage by exposure to hazardous toxic substances. The effectiveness of the program was discussed. Carcinogens, particularly asbestos, are discussed. Bioassays and other forms of analysis are evaluated.

19000 **(NASA-SP—7011(230)) Aerospace medicine and biology. A continuing bibliography with indexes.** (National Aeronautics and Space Administration, Washington, DC (USA)). Mar 1982. 81p. NTIS PC$7.00.

This bibliography lists 244 reports, articles, and other documents introduced into the NASA scientific and technical information system in February 1981. Aerospace medicine and aerobiology topics are included. Listings for physiological factors, astronaut performance, control theory, artificial intelligence, and cybernetics are included.

19001 **(NUREG/CR—2736) Transportation of radioactive material in Michigan. Final report Sep 80-Aug 81.** McCarty, M.J.; Hennigan, J.M.; Bruchmann, G.W. (Michigan Dept. of Public Health, Lansing (USA). Div. of Radiological Health). May 1982. 104p. NTIS, PC A06/MF A01.

Most of the radioactive material transported into and through the State of Michigan is comprised of radiopharmaceuticals. The remainder includes radioactive waste from nuclear power plants and hospitals, uranium ore concentrate (yellowcake) from Ontario, Canada, and periodic spent fuel shipments from a university research reactor. Investigations have revealed that minor violations of packaging and shipping paper regulations persist but to a lesser degree than in previous years. Major operational problems associated with two courier companies have substantially improved but still require improvement. Several minor transportation accidents are reported, none of which resulted in significant radiation exposure. Joint investigations with federal agencies were made, and some resulted in legal action on shippers.

19002 **(PB—82-229337) Fire defense and emergency response planning resource directory. Final report.** Sklar, P.A. (Northwest Arkansas Regional Planning Commission, Springdale (USA)). Feb 1982. 195p. NTIS, PC A09/MF A01.

This directory is designed for use by local officials to assist them in pre-planning for emergencies and disasters. The directory identifies public and private resources in six major areas: hazardous materials incidents, radiological incidents, mass casualty situations, nonstructural fires, natural disasters, and person-caused disasters. Within each of the six types of areas are specific resources. These resources are training programs, response teams, response plans, training manuals, experienced persons and organizations, and reference materials.

19003 **(PB—83-117671) Supplement to the NIOSH certified equipment list, October 1, 1981. Technical report.** (National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Div. of Surveillance, Hazard Evaluation and Field Studies). Oct 1981. 121p. NTIS, PC A06/MF A01.

The NIOSH testing, approval, and certification program of safe personal protective devices and reliable industrial hazard measuring instruments is reviewed. Certified coal mine dust personal sampler units, gas detector tube units, sound concentration meter sets, and respiratory protective devices are described. Names and addresses of manufacturers and distributors of certified products are listed.

19004 **(DOE/NV/10162—1) Tephrostratigraphy and potassium-argon age determinations of seven volcanic ash layers in the Muddy Creek formation of southern Nevada.** Metcalf, L.A. (Nevada Univ., Reno (USA). Desert Research Inst.). Apr 1982. Contract AC08-81NV10162. 196p. NTIS, PC A09/MF A01. Order Number DE83007128.

Seven silicic tephra layers occur in alluvial deposits of the Muddy Creek and equivalent formations at three localities in southern Nevada. Chemical and petrographic characterization indicate the tephra were derived from seven different volcanic eruptions and do not represent any previously known tephra layers. K-Ar age determinations on minerals or glass from each layer yielded 6 to 12 m.y. ages. Discordant ages were obtained on multiple mineral phases due to incorporation of detrital contaminants. The tephra are sufficiently distinctive to constitute stratigraphic marker horizons in the Muddy Creek and equivalent formations. Derivation from the southwestern Nevada volcanic field, active 16 to 6 m.y., is highly likely for some of the tephra. The K-Ar results suggest substantial parts of the Muddy Creek Formation and equivalent basin-fill are 6 to 12 m.y., indicating basin-range faulting began prior to 12 m.y. Little tectonic deformation or physiographic change has occurrred in the past 6 m.y.

19005 **(IPEN-Pub—27) Development of conductivity probe and temperature probe for in-situ measurements in hydrological studies.** Chandra, U.; Galindo, B.J.; Castagnet, A.C.G. (Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)). May 1981. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE82703282.

A conductivity probe and a temperature probe have been developed for in-situ measurements in various hydrological field studies. The conductivity probe has platinum electrodes and is powered with two 12 volt batteries. The sensing element of the temperature probe consists of a resistor of high coefficient of temperature. Response of the conductivity probe is measured in a milliampere mater while the resistance of the thermistor is read by a digital meter. The values of conductivity and temperature are derived from respective calibration. The probes are prototype and their range of measurement can be improved depending upon the requirement of the field problem.

19006 **(LA—9652-MS) Revised volcanic stratigraphy of drill hole J-13, Fortymile Wash, Nevada, based on petrographic modes and chemistry of phenocrysts.** Byers, F.M. Jr.; Warren, R.G. (Los Alamos National Lab., NM (USA)). Jan 1983. Contract W-7405-ENG-36. 24p. NTIS, PC A02/MF A01. Order Number DE83007155.

The core and cuttings of water well J-13 below the lower contact of the Paintbrush Tuff at 1475 ft (449.6 m) to the total depth of 3498 ft (1066.2 m) have been reexamined in the light of recent core drilling at Yucca Mountain sponsored by the Nevada Nuclear Waste Storage Investigations of the US Department of Energy. An updated stratigraphic log is presented, showing the position of cored intervals and sample locations. The tuffs of Calico Hills were penetrated from 1475 to 1740 ft (449.6 to 530 m), a thickness of 265 ft (80.8 m). All three units of the Crater flat Tuff were penetrated: the Prow Pass from 1740 to 1956 ft (530.4 to 596.2 m), the Bullfrog from 2015 to 2320 ft (614.2 to 707.1 m), and the Tram unit from 2350 to 3200 ft (716.3 to 975.4 m). The lowermost ash-flow tuff penetrated from 3220 ft (982.5 m) to the bottom of the hole at 3498 ft (1066.2 m) is the tuff of Lithic Ridge, also penetrated in hole USW-G1. The units were identified by thin-section modal analysis and by electron microprobe analyses of the feldspar and biotite phenocrysts.

19007 **(ONWI—416) Quaternary geology of Rayburn's salt dome: North Louisiana Salt Dome Basin.** Kolb, C.R.; Holmes, J.C. (Louisiana State Univ., Baton Rouge (USA). Inst. for Environmental Studies). Feb 1983. Contract AC06-76RL01830;AC02-83CH10140. 176p. NTIS, PC A09/MF A01; 1. Order Number DE83007232.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A 20- to 100-ft sequence of fine sediments with increasing amounts of sand and chert gravel with depth underlies a topographic low above the salt dome. These deposits are of Quaternary (specifically late Quaternary) age. A boulder zone consisting of water-worn calcite boulders and cobbles in a matrix of dark gray and tan sandy clay and clayey sand is present beneath these gravel-bearing Quaternary deposits and above the anhydrite-gypsum caprock. Isotopic studies have identified the boulder zone as the remnant of a once continuous calcite caprock cover that was subjected to subaerial erosion in the geologic past. Generally speaking, the anhydrite-gypsum caprock is closer to the surface near the center of the topographic low over the salt dome and slopes down toward the outer limits of this low. However, the caprock surface rises again very abruptly and very steeply at the extreme edges of the low, suggesting that an underground ridge of caprock, sometimes only 15 ft below the surface, completely encircles the outer boundaries of the low. The only outlet to the central topographic low that could have drained it during Quaternary time is to the south along Fouse Creek, now filled with Quaternary alluvium only 10 to 12 ft deep. Thus, the 100-ft thickness of gravel-bearing Quaternary that underlies the low can be accounted for only by dissolution of the underlying salt and subsidence of the Quaternary. Radiocarbon dates from samples of wood found in the gravel-bearing (the surfi-

cial) Quaternary above the dome range from about 13,500 to 19,500 years BP. If radiocarbon dates from two organic samples from the boulder zone are correct (about 19,000 to 21,000 years BP), dissolution and subsidence during the past 20,000 years range between 1.5 and 5.0 ft per 1000 yr.

19008 **(UCRL—53337) Earth Sciences Department collected abstracts: 1981.** Henry, A.L.; Hornady, B.F. (eds.). (Lawrence Livermore National Lab., CA (USA)). 1 Oct 1982. Contract W-7405-ENG-48. 130p. NTIS, PC A07/MF A01. Order Number DE83007149.

19009 **(AD-A—121674/6) Late paleogene (eocene to oligocene) paleoceanography of the northern North Atlantic. Doctoral thesis.** Miller, K.G. (Woods Hole Oceanographic Institution, MA (USA)). Nov 1982. 99p. NTIS, PC A05/MF A01.

Seismic stratigraphic evidence indicates that a major change in abyssal circulation occurred in the latest Eocene-earliest Oligocene of the North Atlantic. Reflector R4 reflects a change from weakly (Eocene) to vigorously circulating bottom water (early Oligocene). Sediment distribution studies indicate a northern source for this bottom water, probably from the Arctic via the Norwegian-Greenland Sea/Faeroe-Shetland Channel. Current-controlled sedimentation and erosion continued through the Oligocene; however, above reflector R3 (upper Oligocene), the general intensity of abyssal currents decreased. Above reflector R2 (lower Miocene) a further reduction in abyssal currents resulted in more coherent current-controlled sedimentation and a major phase of sediment drift development. Major deep-sea benthic foraminiferal changes occurred between the middle Eocene and earliest Oligocene: an agglutinated assemblage was replaced by a calcareous assemblage (abyssal Labrador Sea), and an indigenous Eocene calcareious fauna became extinct (abyssal Bay of Biscay). In shallower Atlantic sites (< 3km paleodepth), a Nuttallides truempyi assemblage was replaced by an assemblage of long- and wide-ranging taxa in the early late Eocene.

19010 **(CNEN-RT/AMB—(81)9) Macroseismic approach to the attenuation of intensity with distance.** Peronaci, M. (Comitato Nazionale per l'Energia Nucleare, Casaccia (Italy). Dipartimento Radiazioni e Ricerche di Sicurezza e Protezione). 1981. 29p. NTIS (US Sales Only), PC A03/MF A01; 1. Order Number DE82902798.

Portions are illegible in microfiche products.

An empirical relationship between the size of historical earthquakes and the attenuation coefficients of intensity with distance, for selected azimuthal values, and a relative new intensity attenuation law are presented. Data from a recent isoseismal atlas on northeastern Italy have been analyzed and a comparison between the procedure and the equivalent circle method is performed.

19011 **(CNEN-RT/AMB—(81)-10) Kanamori-Jennings method for the determination of local magnitude M/sub L/ applied in Italy.** Fels, A.; Basili, M. (Comitato Nazionale per l'Energia Nucleare, Casaccia (Italy). Dipartimento Radiazioni e Ricerche di Sicurezza e Protezione). 1981. 18p. (In Italian). NTIS (US Sales Only), PC A02/MF A01; 1. Order Number DE82902797.

Portions are illegible in microfiche products.

The Kanamori-Jennings method for the determination of the local magnitude M/sub L/, from strong motion accelerograms has been adopted to revaluate the M/sub L/ of the mainshocks of the Friuli earthquake. The results so obtained agree with the values from the traditional seismometric techniques and showed the possibility to use this method, even for Italian records coming from quite different geomorphological context with respect to the Californian one where the method was originally checked.

19012 **(FOA-C—20477-T1) Research on Swedish earthquakes 1980-1981.** Slunga, R. (Foersvarets Forskningsanstalt, Stockholm (Sweden)). Nov 1982. 190p. Dep. NTIS, PC A; 2. Order Number DE83901148.

Microfiche only, copy does not permit paper copy reproduction.

The research on Swedish earthquakes, recorded December 1979-1981 by the digital seismic network in Southern Sweden operated by National Defence Research Institute (FOA) is reported. The high-quality earthquake data produced by this network allows source inversion of all recorded earthquakes. A method based on both first-motion polarities and spectral amplitudes is presented. Besides the fault-plane solution and the seismic moment, also corner frequencies, fault dimensions, stress drops, and peak slip displacements are determined for 53 Swedish earthquakes. Epicentral ground motion is studied and a relation for a two-parametric scaling (seismic moment and stress drop) of the earthquakes is proposed and applied to the bedrock peak accelerations. An NW-SE horizontal compression is indicated by the source mechanisms. Quite often, surface topographic lineaments are consistent with the fault-plane solutions. The frequency, epicentral and depth distribution, and peak accelerations are in agreement with previous studies on seismic risk.

19013 **(USGS-OFR—82-409) Three-dimensional modeling of the Nevada Test Site and vicinity from teleseismic p-wave residuals.** Monfort, M.E.; Evans, J.R. (Geological Survey, Denver, CO (USA)). 1982. Contract AI08-78ET44802. 71p. NTIS, PC A04/MF A01; 1. Order Number DE83006666.

Portions are illegible in microfiche products.

A teleseismic P-wave travel-time residual study is described which reveals the regional compressional-velocity structure of southern Nevada and neighboring parts of California to a depth of 280 km. During 1980, 98 teleseismic events were recorded at 53 sites. P-wave residuals were calculated relative to a network-wide average residual for each event and are displayed on maps of the stations for each of four event-azimuth quadrants. Fluctuations in these map-patterns of residuals with approach azimuth combined with results of linear, three-dimensional inversions of some 2887 residuals indicate the following characteristics of the velocity structure of the southern Nevada region: (1) a low-velocity body exists in the upper crust 50 km northeast of Beatty, Nevada, near the Miocene Timber Mountain-Silent Canyon caldera complex. Another highly localized low-velocity anomaly occurs near the southwest corner of the Nevada Test Site (NTS). These two anomalies seem to be part of a low-velocity trough extending from Death Valley, California, to about 50 km north of NTS; (2) there is a high-velocity body in the mantle between 81 and 131 km deep centered about 10 km north of the edge of the Timber Mountain caldera; (3) a broad low-velocity body is delineated between 81 and 131 km deep centered about 30 km north of Las Vegas; (4) there is a monotonic increase in travel-time delays from west to east across the region, probably indicating an eastward decrease in velocity, and lower than average velocities in southeastern Nevada below 31 km; and (5) considerable complexity in three-dimensional velocity structure exists in this part of the southern Great Basin. Inversions of teleseismic P-wave travel-time residuals were also performed on data from 12 seismometers in the immediate vicinity of the NTS to make good use of the closer station spacing in that area.

19014 (DOE/ER/10361—3) Mechanical and transport properties of rocks at high temperatures and pressures. Task I: the physical nature of fracturing at depth; Task II: fracture permeability of crystalline rocks as a function of temperature, pressure, and hydrothermal alteration; Task III: mechanical properties of rocks at high temperatures and pressures. Progress report. Carter, N.L.; Johnson, B.; Friedman, M.; Handin, J. (Texas A and M Univ., College Station (USA). Research Foundation). Nov 1982. Contract AS05-79ER10361. 73p. NTIS, PC A04/MF A01. Order Number DE83007057.

Progress is reported in the following areas: (1) the physical nature of fracturing at depth; (2) fracture permeability of crystalline rocks as a function of temperature, pressure, and hydrothermal alteration; and (3) mechanical properties of rocks at high temperatures and pressures. (ACR)

19015 (DOE/ER/10445—3) Experimental study of opening-mode crack growth in rock. Technical progress report. Gordon, R.B. (Yale Univ., New Haven, CT (USA)). Feb 1983. Contract AC02-79ER10445. 92p. NTIS, PC A05/MF A01; 1. Order Number DE83007192.

Portions are illegible in microfiche products.

Measurements of fracture strength have been made on rocks containing a wide range of minerals and microstructures. Elastic moduli determined from data recorded during the fracture experiments were used in the computation of the strain energy release rate. Measured steady-state fracture energies range from about 40 J/m^2 (Portland sandstone) to about 280 J/m^2 (Barre granite). While the energy of crack initiation and crack propagation depends on the strength of the constituent minerals, each is controlled primarily by the microstructure of the rock. The density of pores and microcracks and the degree to which they are interconnected are most important. The weakest rocks are those that have either a weak structural component that forms nearly continuous, non-branching surfaces within the microstructure (as in the Salem limestone) or a very high porosity (as in the Portland sandstone). The strongest rocks are polymineralic and have connected microcrack networks that permit formation of multiple crack paths through the structure (as in the granites). The fracture energy depends on crack speed and chemical environment. Water weakening ranges from a reduction of more than 50% of the strength in the Portland sandstone to nil in diabase, marble, and the Cardium sandstone.

19016 (LA—9322-MS) Methodology for determining time-dependent mechanical properties of tuff subjected to near-field repository conditions. Blacic, J.D.; Andersen, R. (Los Alamos National Lab., NM (USA)). Jan 1983. Contract W-7405-ENG-36. 51p. NTIS, PC A04/MF A01. Order Number DE83007054.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We have established a methodology to determine the time dependence of strength and transport properties of tuff under conditions appropriate to a nuclear waste repository. Exploratory tests to determine the approximate magnitudes of thermomechanical property changes are nearly complete. In this report we describe the capabilities of an apparatus designed to precisely measure the time-dependent deformation and permeability of tuff at simulated repository conditions. Preliminary tests with this new apparatus indicate that microclastic creep failure of tuff occurs over a narrow strain range with little precursory Tertiary creep behavior. In one test, deformation under conditions of slowly decreasing effective pressure resulted in failure, whereas some strain indicators showed a decreasing rate of strain.

19017 (SAND—81-1116C) Creep testing of salt: procedures, problems and suggestions. Wawersik, W.R.; Preece, D.S. (Sandia National Labs., Albuquerque, NM (USA)). 1982. Contract AC04-76DP00789. 40p. (CONF-811131—3). NTIS, PC A03/MF A01; 1. Order Number DE82011029.

From 1. conference on the mechanical behavior of salt; University Park, PA, USA (9 Nov 1981).

Portions are illegible in microfiche products.

Apparatus and procedures were described for salt testing to 70 MPa confining pressure and 250°C with emphasis on the evaluation of rock salt creep. Descriptions of hardware, data reduction and data fitting procedures were presented with particular consideration of methods which ensure consistency and objectivity in data analyses. Difficulties were discussed which bear on the validity and interpretation of creep measurements. End-effects were evaluated by means of finite element calculations. Preliminary results of two cases indicate reasonably homogeneous stress and strain conditions to more than 20 percent specimen shortening. This observation suggests a minimal influence of boundary conditions. Various difficulties in strain measurements helped to explain the wide scatter in published elastic constants for natural rock salt. Measurement and good resolution of radial strains on cylindrical samples were deemed important for the interpretation of accelerating creep. Finally, problems in identifying secondary creep and the consequences of overload hardening were considered by way of examples of experiments with good and poor stress control. The many problems in gathering unambiguous data concerning salt creep in particular prompted suggestions for more detailed test documentation in publications and possible reference experiments under standardized test conditions.

19018 (SAND—82-2187) Engineering model for predicting rubble motion during blasting. Schamaun, J.T. (Sandia National Labs., Albuquerque, NM (USA)). Jan 1983. Contract AC04-76DP00789. 25p. NTIS, PC A02/MF A01. Order Number DE83007095.

Recent applications of explosives and blasting agents to rubble rock have led to requirements for more elaborate design and analysis methods. In most blasting uses, it is necessary not only to fracture the rock, but also to move the broken rubble in a predictable manner. Many in situ extraction techniques require rubblization to take place in a confined region where rock motion is a predominate factor in creating a permeable broken bed. In this paper, an engineering model is presented which describes the large rubble motion during blasting. This model is intended to provide the blast designer with a tool for evaluation and further refinement of blasting patterns and timing sequences. In this model the rock medium is represented by a discrete series of circular regions of fractured material. These regions are set in motion by pressure loads from the explosive. The motion of the regions is calculated using a step-wise, explicit, numerical time integration method. Interaction of adjacent regions is based on inelastic impact of spherical bodies. The derivation of this model is presented along with the background for selecting loading pressure based on explosive behavior. Three typical examples, including both cratering and bench geometries, are discussed which illustrate the use of this model to predict rubble motion. This engineering representation appears to provide a practical model for use in predicting rubble motion and a tool for design evaluation of blasting in confined geometries. 15 figures, 1 table.

19019 (UCID—19658) Correlation of ultrasonic velocity and rock strength. Lin, W. (Lawrence Livermore National Lab., CA (USA)). 12 Jan 1983. Contract W-7405-ENG-48. 22p. NTIS, PC A02/MF A01. Order Number DE83007355.

Ultimate strength and shear wave velocity of dry, 50% saturated, and saturated Paintbrush tuff samples from the Nevada Test Site (NTS) are measured as a function of pressure up to 400 MPa. A linear relationship exists between the ultimate strength (tau) and shear modulus (μ) for the dry tuff at pressures from 0.1 to 20 MPa and from 100 to 300 MPa, with values of $d\,tau/d\mu$; of about 1.25×10^{-2} and 2.6×10^{-2}, respectively. At pressures between 20 and 100 MPa a linear relationship also exists with a much greater value of $d\,tau/d\mu$, of about 9.9×10^{-2}. For the half-saturated tuff, under undrained testing conditions, a similar linear relationship exists at pressures up to 20 MPa. At pressures between 20 and 300 MPa the data of the partially saturated tuff have too much scattering to deduce a meaningful relation. No such correlation can be found for the saturated tuff sample under undrained testing conditions. If similar relations could be found for other rock types and under other controlled experimental coditions, such as at a fixed pore fluid pressure

(drained test) or temperature, then the results would be very valuable for the estimation of the in situ strength of rock masses.

19020 (DOE/EV/10097—4) Global temperature patterns 6000 years ago. Progress report. Webb, T. III. (Brown Univ., Providence, RI (USA). Dept. of Geological Sciences). Dec 1982. Contract AC02-79EV10097. 54p. NTIS, PC A04/MF A01; 1. Order Number DE83006815.

Portions are illegible in microfiche products.

Research is proceeding on schedule for the preparation of a global paleoclimatic data base for 6000 yr B.P. Computer files exist at Brown University for pollen, lake-level, and marine plankton data. New data and radiocarbon dates from Australia, Alaska, Labrador, and the Indian Ocean were obtained during 1982, and these are being added to the data base. Progress was made in gaining climatic estimates from pollen data in North America and Europe. Maps are included that show the temperature estimates for 6000 yr B.P. from central eastern North America. The estimates for mean annual temperature in this mid-latitude area average about 2°C higher than the observed temperatures for today. Global maps are also presented for past lake levels and changes in the lake levels in closed basin lakes (Appendix A). These maps show that the water levels in lakes are lower today than at 6000 yr B.P. for almost all lakes in all regions. These changes are marked in northern Africa, Australia, and southwestern North America.

19021 (GJBX—4-83) Investigation of Great Basin big sagebrush and black greasewood as biogeochemical indicators of uranium mineralization. Final report. National Uranium Resource Evaluation. Diebold, F.E.; McGrath, S. (Montana Applied Research Group, Butte (USA)). Nov 1982. Contract AC13-76GJ01664. 49p. NTIS, PC A03/MF A01; 1. Order Number DE83005354.

Portions are illegible in microfiche products.

The effects of varying phosphate concentrations in natural aqueous systems upon the uptake of uranium by big sagebrush (Artemesia tridentata subsp. tridentata) and black greasewood (Sarcobatus vermiculatus (Hook) Torr.) were investigated. Two separate growth experiments with five drip-flow hyroponic units were used and plant seedlings were grown for 60 days in solutions of varying phosphate and uranium concentrations. Successful growth experiments were obtained only for big sagebrush; black greasewood did not sustain sufficient growth. The phosphate concentration of the water did affect the uptake of uranium by the big sagebrush, and this effect is most pronounced in the region of higher concentrations of uranium in the water. The ratio of the concentration of uranium in the plant to that in the water was observed to decrease with increasing uranium concentration in solution. This is indicative of an absorption barrier in the plants. The field data shows that big sagebrush responds to uranium concentrations in the soil water and not the groundwater. The manifestation of these results is that the use of big sagebrush as a biogeochemical indicator of uranium is not recommended. Since the concentration of phosphate must also be knwon in the water supplying the uranium to the plant, one should analyze this natural aqueous phase as a hydrochemical indicator rather than the big sagebrush.

19022 (LA—9332-MS) Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment. Norris, A.E.; Aguilar, R.D.; Bayhurst, B.P. . (Los Alamos National Lab., NM (USA)). Nov 1982. Contract W-7405-ENG-36. 45p. NTIS, PC A03/MF A01. Order Number DE83007154.

This report presents the results of geochemical studies of Tunnel Bed tuff that were performed by Los Alamos National Laboratory or done at its direction as part of the Nevada Test Site G-Tunnel Radionuclide Migration Field Experiment. A tuff-treated water was prepared and used in laboratory-scale measurements of radionuclide sorption onto crushed Tunnel Bed tuff, pulverized fracture-fill material, tuff wafers, and a solid tuff core. Modelling studies were undertaken to determine the effects of matrix diffusion and unsaturated tuff on the proposed fracture-flow experiments. The initial results of those studies are presented in this report.

19023 Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed. Cerling, T.E.; Turner, R.R. (Oak Ridge National Lab., TN (USA)). *Geochimica et Cosmochimica Acta;* **46**: No. 8, 1333-1343(Aug 1982).

Iron and manganese oxide coatings are actively forming on stream substrates in the White Oak Creek watershed in East Tennessee. Although oxidizing conditions are required for Fe-Mn oxide precipitation, coatings accumulate only if dissolved iron and manganese exceed 50 μg/L. Below this, coatings are lost by abrasion as fast as or faster than they form. Annual rates of formation of 3 mg/g on substrate (gravel) were observed. Manganese is dissolved from coatings between Eh values of 100 to 300 mV and below 1 mg/L dissolved O_2 at pH 6.5 to 7.5. Iron oxides can be precipitated under these conditions. Uncontaminated gravels with oxide coatings (composed of illite, quartz, and feldspar) adsorbed radionuclides rapidly from waters below MPC (Maximum Permissible Concentration) levels. Contaminated gravels placed in uncontaminated waters lost ^{60}Co by abrasion in oxidizing conditions and by dissolution of manganese coatings in reducing conditions. Exchangeable ^{90}Sr was completely lost after one month whereas nonexchangeable ^{90}Sr was lost more slowly; ^{137}Cs was totally retained by the gravels. Gravels such as these can be used to monitor the radionuclide content of waters in the environment.

19024 (NP—3901054) Kinematics of a stochastic field of internal waves in a shear current. Peters, H. (Kiel Univ. (Germany, F.R.). Inst. fuer Meereskunde). 1981. 120p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83901054.

Modes and dispersion curves of high-frequency internal waves (0.3 to 15 cph) are calculated for the mean stratification and the mean shear current as observed in the tropical Atlantic within the Equatorial Counter Current during GATE. A model of the kinematics of free, linear internal waves is constructed by means of stochastic superposition of shear modes. In order to test the model and to obtain basic knowledge about Doppler effects calculations are carried out for simple mean conditions (N^2 = const., anti u = const.). The model calculations for the GATE case yield the following results: A shoulder observed in the energy spectra at frequencies of 1.5 to 4 cph, representing a considerable part of the total energy of the wave field, cannot be explained by kinematic effects. It must be of dynamical origin. In the above frequency band the wave field is composed of the first mode alone. The observations indicate a directionality of the wave field against the mean current. In order to explain this feature both kinematic and dynamic aspects have to be considered. The observed maximum of coherence between the current of the mixed layer and the temperature in the tropical thermocline has basically kinematic reasons. By means of adjusting the model parameters to the observations a wavenumber spectrum is determined. Its scales are such that only part of the anisotropy of the system of modes and dispersion curves becomes effective. The model cannot describe the vertical structure of the observed current fluctuations completely. The investigation is critically reviewed.

19025 (AD-A—120515/2) Invalidity of local thermodynamic equilibrium for electrons in the solar transition region. I. Fokker-Planck results. Shoub, E.C. (Stanford Univ., CA (USA). Inst. for Plasma Research). Aug 1982. 94p. NTIS, PC A05/MF A01.

An effective numerical method for solving boundary value problems for the Landau Fokker-Planck equation is developed and applied to calculating the electron velocity distribution function in model solar transition regions. Numerical results illustrating the speed, pitch angle and spatial dependence of the distribution function are presented. From these it is concluded that the widely-invoked assumption that in weakly inhomogeneous collisional plasma the angle-averaged distribution function remains close to local-Maxwellian distribution is incorrect. Instead, the distribution function forms an anisotropic, high velocity tail in the lower temperature regions due to the diffusion of fast electrons anti-parallel to the temperature gradient. It is shown that as a result of there being an excess of fast electrons in the low transition region (T < or about 3 x 10 to the 5th power K, say), inelastic electron-ion collision rates are significantly enhanced over the Maxwellian values. Attendant effects on the ionization balance of a typical metal (magnesium) are shown to be significant. Implications of the breakdown of the loca-Maxwellian approximation for several outstanding questions related to the solar transition region are discussed, including: energy balance in low transition region and upper chromosphere, the helium resonance line spectrum, the Schmahl-Orrall observation of continuum absorption by neutral hydrogen, and the origin of the 20,000 K temperature plateau.

19026 **(AD-A—120524/4) On the thermal stability of coronal loop plasma.** Antiochos, S.K.; Emslie, A.G.; Shoub, E.C.; An, C.H. (Stanford Univ., CA (USA). Inst. for Plasma Research). Aug 1982. 23p. NTIS, PC A02/MF A01.

We consider the stability to thermal perturbation of static models of coronal loops. The effects of cool, radiatively stable material at the loop base are included. The linear stability turns out to be sensitive only to the boundary conditions assumed on the velocity at the loop base. The question of the appropriate boundary conditions is discussed, and we conclude that the free-surface condition (the pressure perturbation vanishes), rather than the rigid-wall (the velocity vanishes), is relevant to the solar case. We find that the static models are thermally unstable, with a growth time of the order of the coronal cooling time. The physical implications of these results for the solar corona and transition-region are discussed.

19027 **(AD-A—121994/8) Study and analyze energetic particle and magnetic activity data. Final report 1 apr 79-31 mar 82.** Gentile, L.; Holeman, E.G.; Huber, A.; Pantazis, J.; Parsignault, D.R. (Emmanuel Coll., Boston, MA (USA). Physics Research Div.). Jun 1982. 351p. NTIS, PC A16/MF A01.

In the areas of communication and surveillance, where there may exist an inability to predict solar particle effects on atmospheric and ionospheric environmental conditions, our research effort has been directed toward the design, development, and construction of energetic particle detection instrumentation for satellite flight. Our instruments measure energetic particle fluxes, discriminate species (electrons, protons, and/or ions), and perform energy analyses; are capable of discovering new scientific knowledge concerning the near-earth space energetic particle environment, and are compatible with Air Force satellite rides. The effort has covered the entire spectrum from design thru construction and integration into the host satellite vehicle. All instrumentation was adapted to current research needs. New devices such as position-sensitive detectors, microprocessors, and magnetic materials were integrated into current designs to obtain maximum spatial, angular and energy resolution consistent with reliability and delivery schedules. Reports on all aspects of the instrumentation and data formats were prepared for utilization and interpretation in analyses which were performed on the final data.

19028 **(CENBG—8202) Nuclear reactions and cosmological rare gases.** Regnier, S.; Baros, F.; Lavielle, B.; Simonoff, M.; Simonoff, G.N. (Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires). Feb 1982. 4p. (In French). (CONF-820263—1Summ.). NTIS (US Sales Only), PC A02/MF A01. Order Number DE82703276.

From INAG meeting on planetology; Paris, France (23 Feb 1982).

Published in summary form only.

19029 **(IPS-M—81-14) The suspension system of the cryogenic gravitational antenna of the Istituto Plasma Spazio.** Coccia, E. (Rome Univ.); Iafolla, V. (Istituto di Ricerce e Tecnologia per lo Studio del Plasma Nello Spazio, Frascati (Italy)). Oct 1981. 35p. (In Italian). NTIS, PC A03/MF A01.

The design of a two stage suspension system for a gravitational antenna is described. The antenna weighs 5 t and works in liquid helium, pumped at 4.2 K. The signals to be detected, mainly from supernova sources, are energy fluxes on the order of 0.0001 erg/cm sq. The amplitudes, induced in the fundamental vibration mode at 1796 Hz, are about 10 to the -18th power cm. The mechanical attenuation system was designed with a 3 Hz resonant frequency and 100 dB attenuation for the first stage and a 30 Hz frequency and 70 dB attenuation for the second stage. The measured value of attenuation is 120 dB, which is deemed satisfactory although lower than the 150 dB design value. The possible causes of this attenuation loss are discussed. (ESA)

19030 **(N—82-21119) Gamma ray astronomy in perspective.** (National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). 1981. 12p. NTIS (US Sales Only); GPO HC $10.00.

In its Gamma Ray Astrophys. p 1-14 (SEE N82-21118 11-90) REFS.

A brief overview of the development of gamma ray astronomy is presented. Gamma ray telescopes and other optical measuring instruments are highlighted. Emphasis is placed on findings that were unobtainable before gamma ray astronomy. Information on evolution of the solar system, the relationship of the solar system to the galaxy, and the composition of interstellar matter is discussed.

19031 **(N—82-21132) Prospects for gamma ray astronomy.** (National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). 1981. 5p. NTIS (US Sales Only); GPO HC $10.00.

In its Gamma Ray Astrophys. p 385-389 (SEE N82-21118 11-90) REFS.

The Solar Maximum Mission and the Gamma Ray Experiment aboard the SMM spacecraft are discussed. Mission plans for interplanetary probes are also discussed. The Gamma Ray observatory and its role in future gamma ray astronomy is highlighted. It is concluded that gamma ray astronomy will be of major importance in the development of astronomical models and in the development of cosmological theory.

19032 **(NASA-SP—453) Gamma ray astrophysics: new insight into the universe.** Fichtel, C.E.; Trombka, J.I. (National Aeronautics and Space Administration, Washington, DC (USA)). 1981. 405p. NTIS (US Sales Only); GPO HC $10.00.

REFS Original contains color illustrations.

Gamma ray observations of the solar system, the galaxy and extragalactic radiation are reported. Topics include: planets, comets, and asteroids solar observations interstellar medium and galactic structure compact objects cosmology and diffuse radiation. The instrumentation used in gamma ray astronomy in covered along with techniques for the analysis of observational spectra.

19033 **(PB—82-247024) Cross-correlations between monthly averages of solar-interplanetary indices fom 1971 to 1978. Technical memo.** Suess, S.T. (National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.). Mar 1982. 85p. NTIS, PC A05/MF A01.

The correlations between certain indices describing various forms of solar activity, and between those indices and indices that measure interplanetary or terrestrial consequences of solar activity are described. A limited set is specified, especially with respect to terrestrial consequences. Included are sunspot number, calcium plage area index, 10.7 and 21 cm radio flux, geomagnetic aa index, average solar wind speed, and 27 day recurrence index. The indices themselves are described, and the cross-correlations are computed for various time lags, or phase differences between the two indices in order to find that lag for which the (absolute value of the) corre-

lation maximizes. A plot is produced for cross-correlation versus phase, and a scatter plot and data overlay plot are given for the lag at which the cross-correlation maximizes.

19034 **(PB—82-247388) Solar-geophysical data number 452, April 1982. Part II (comprehensive reports). Data for October 1981 and miscellanea.** Coffey, H.E. (National Geophysical and Solar-Terrestrial Data Center, Boulder, CO (USA)). Apr 1982. 83p. NTIS, PC A05/MF A01.

In addition to an index for 1981-1982, this issue of comprehensive reports provides data for October 1981 on solar radio emission, solar x-ray radiation, and mass ejections from the sun. Miscellaneous data includes active regions 18 August - 12 October 1981, synoptic solar maps 18 August - 12 October 1981, and energetic solar particles July - September 1980.

19035 **(PB—83-111401) Solar-geophysical data number 454, june 1982. part ii (comprehensive reports). data for december 1981.** Coffey, H. (National Geophysical and Solar-Terrestrial Data Center, Boulder, CO (USA)). Jun 1982. 52p. NTIS, PC A04/MF A01.

In addition to an index for 1981-1982, this issue of comprehensive reports provides data for December 1981 on solar radio emission, solar x-ray radiation, and mass ejections from the sun. Miscellaneous data includes active regions 12 October - 11 November 1981, synoptic solar maps 12 October - 11 November 1981, and IMP Electrons, Protons, Alphas October 1980.

19036 **(PB—83-118174) A summary of solar 1-8a measurements from the SMS and GOES satellites, 1977-1981.** Bouwer, S.D.; Donnelly, R.F.; Falcon, J.; Quintana, A.; Caldwel, G. (National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.). Jul 1982. 75p. NTIS, PC A04/MF A01.

The 1-8A band of synodic full-disc solar x-rays (1-8A) W/(m sup 2) have been measured nearly continuously from 1975 to 1981 aboard the SMS-1, SMS-2, GOES-1, GOES-2, and GOES-3 satellites. These measurements are scheduled to continue in an on-going series of GOES satellites. The 1-8A band of X-rays are proportional to the emission measure at coronal heights at temperatures greater than 2,000,000 K. In the past, attention has been centered on using solar x-ray measurements in the detection and description of solar flares and their ionospheric effects. Here we center on a practical method of describing solar 1-8A mean and background X-ray measurements in a continuous time series to describe long-term solar variability. Intercomparisons of the satellites using linear regression techniques and a useful background coronal index are described. Sources of error and statistical information on relative accuracy are discussed. Data are presented in monthly plots of hourly averages, in tables of daily mean and background indices, and in comparison to the Ottawa 10.7 cm radio flux.

19037 **(PB—83-120311) Solar-geophysical data number 455, July 1982. Part II (comprehensive reports). Data for January 1982 and miscellanea.** Coffey, H.E. (National Geophysical and Solar-Terrestrial Data Center, Boulder, CO (USA)). Jul 1982. 43p. NTIS, PC A03/MF A01.

Contents: Solar radio emission; Solar x-ray radiation; Mass ejections from the sun; Active regions 8 November 1981 - 2 January 1982; Synoptic solar maps 8 November 1981 - 2 January 1982.

19045 **(AD-A—116400/3) Electric fields in earth orbital space. Annual report.** Olson, W.P.; Pfitzer, K.A.; Scotti, S.J. (McDonnell Douglas Astronautics Co., Huntington Beach, CA (USA)). May 1982. 48p. NTIS, PC A03/MF A01.

This is a report of progress during the past year. The work was performed in three areas with a long term goal understanding the formation and maintenance of electrostatic fields in the earth's magnetosphere. The entry of low energy charged particles into a magnetically closed magnetosphere has been examined in some detail. Entry is permitted because of the non-uniform nature of the magnetic field over the magnetopause surface. Electrostatic fields may be formed across the tail of the magnetosphere because fo the different 'entry efficiencies ' of protons and electrons. The consequences of this particle entry mechanism for the plasma sheet, plasma mantle, and boundary plasmas in the magnetosphere are examined. The mathematics of particle entry was investigated in a one-dimensional boundary using both kinetic theory and bulk MHD parameters. From our participation in the 6th Coordinated Data Analysis Workshop, we have determined that at least during disturbed magnetic conditions, currents persist near geoshychronous orbit in the nightime region which are presently not included in our dynamic magnetic field models. These currents are probably associated with the field aligned currents which close in the ionosphere near auroral latitudes.

19046 **(AD-A—116848/3) Electron velocity shear instability in the auroral ionosphere. Memorandum report.** Keskinen, M.J.; Huba, J.D. (Naval Research Lab., Washington, DC (USA)). 25 Jun 1982. 38p. NTIS, PC A03/MF A01.

A linear electrostatic kinetic theory of velocity sheared electron streams flowing parallel to the geomagnetic field is presented. Our development, which includes the effects of density gradients, background ions and electron collisions, is valid for arbitrary T sub e/T sub i, where T sub e and T sub i are the electron and ion temperatures, respectively. For applications to the auroral ionosphere, we find that the interface between downward flowing hot electrons and upward flowing return current cold electrons, commonly seen near auroral arcs, is unstable to a high frequency electron velocity shear driven instability. The mode is characterized by gamma less than or = .001 omega pe and r sub Li > k to the -1 power > r sub Le, where gamma is the growth rate, omega pe is the electron plasma frequency, k is the wavenumber, and r sub L alpha is the mean Larmor radius of species alpha. In the nonlinear regime, it is anticipated that this instability can evolve into a vortex configuration and as a result, can act as a block near the edges of the electron flow.

19047 **(NASA-TM—76742) Ion-cyclotron turbulence and diagonal double layers in a magnetospheric plasma.** Liperovskiy, V.A.; Pudovkin, M.I.; Skuridin, G.A.; Shalimov, S.L. (National Aeronautics and Space Administration, Washington, DC (USA)). Oct 1981. 63p. (PR—609). NTIS, PC A04/MF A01.

Transl. into ENGLISH of Russian Rept. PR-609 Inst. of Space Research, Moscow, 1980 p 1-71 REFS Transl. by Scientific Translation Service, Santa Barbara, Calif.

A survey of current concepts regarding electrostatic ion-cyclotron turbulence (theory and experiment), and regarding inclined double potential layers in the magnetospheric plasma is presented. Anomalous resistance governed by electrostatic ion-cyclotron turbulence, and one-dimensional and two-dimensional models of double electrostatic layers in the magnetospheric plasma are examined.

19048 **(PB—82-246976) Modelling of total electron content measured by the ATS-6 radio beacon experiment. Technical memo.** Grimolizzi, O. (National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.). Apr 1982. 32p. NTIS, PC A03/MF A01.

The following conclusions can be reached through the model study: A physically realistic model, when used in conjunction with foF2 and Faraday content observations can be used to infer information on neutral winds and electron density profiles. The resulting profiles are in reasonable agreement in summer and equinox with those from a semi-empirical model. The agreement is not good in winter, be cause the assumptions in the semi-empirical night model are unreliable. Nevertheless, the input quantities to the semi-empirical model, when calculated from the results, are more consistent; Neutral winds can sustain the ionization at F-layer peak altitudes in summer, but they cannot account for the Faraday content at night in equinox and winter; and Discrepancies between calculated and observed electron content values can be reduced by a downward proton flux. A small proton flux suffices to explain the discrepancies.

19049 **(UCID—19657-82) Summary of photochemical and radiative data used in the LLNL one-dimensional transport-kinetics model of the troposphere and stratosphere: 1982.** Connell, P.S.; Wuebbles, D.J. (Lawrence Livermore National Lab., CA (USA)). Jan 1983. Contract W-7405-ENG-48. 43p. NTIS, PC A03/MF A01. Order Number DE83005490.

This report summarizes the contents and sources of the photochemical and radiative segment of the LLNL one-dimensional transport-kinetics model of the troposphere and stratosphere. Data include the solar flux incident at the top of the atmosphere, absorption spectra for O_2, O_3 and NO_2, and effective absorption coefficients for about 40 photolytic processes as functions of wavelength and, in a few cases, temperature and pressure. The current data set represents understanding of atmospheric photochemical processes as of late 1982 and relies largely on NASA Evaluation Number 5 of Chemical Kinetics and Photochemical Data for Use in Stratospheric Modeling, JPL Publication 82-57 (DeMore et al., 1982). Implementation in the model, including the treatment of multiple scattering and cloud cover, is discussed in Wuebbles (1981).

19050 **(AD-A—115818/7) Electron excitation of O_2 metastables in O_2-N_2 mixtures and of free-free radiation in argon. Final report oct 80-sep 81.** Yamabe, C.; Phelps, A.V. (National Bureau of Standards, Boulder, CO (USA). Quantum Physics Div.). May 1982. 40p. NTIS, PC A03/MF A01.

Measurements have been made of electron excitation coefficients for the production of O_2(a(1)delta) metastables in mixtures of O_2 and N_2 for a range of mixture ratios and mean electron energies. The results are in agreement with calculations using the best available electron collision cross sections sets provided proper allowance is made for cascading from high excited states. Measurements have been made of coefficients for the production of free-free photons (Bremsstrahlung) as a result of the collisions of electrons with argon atoms. These measurements were made under the carefully controlled conditions of the electron drift tube. The mean electron energy was varied from 1.4 to 4.2 eV and the wavelength was varied from 500 nm to 1.3 nm. The results are in agreement with theory to within the experimental uncertainty of + or - 20%.

19051 **(AD-A—116197/5) Collision-induced energy transfer in the b state of diatomic sulfur. Technical report.** Caughey, T.A.; Crosley, D.R. (Army Armament Research and Development Command, Aberdeen Proving Ground, MD (USA). Ballistics Research Lab.). May 1982. 63p. NTIS, PC A04/MF A01.

Rates for collision-induced vibrational and rotational energy transfer within the B(3) summation of diatomic sulfur are reported. The S2 was initially excited to $V'=4$, $N'=40$, $J'=41$ by absorption of a Zn atomic line. Fluorescence measurements, made as a function of foreign gas pressure, were used to determine the rates. The collision partners investigated were the five rare gases, H2, and N2. In addition, the rate of quenching of S2(B, $v'=4$) by S2(X) is reported.

19052 **(AD-A—116863/2) Experimental determination of initial vibrational and rotational energy distributions from the reaction of atomic deuterium with molecular fluorine. Final scientific report 1 Jun 80-1 Jul 81.** Jonathan, N. (Southampton Univ. (UK)). 2 Jun 1982. 18p. NTIS (US Sales Only).

Attempts to determine the initial vibrational and rotational energy distributions in deuterium fluoride produced from the reaction D + F2 yields DF + F are described. The results are compared with those obtained from the measured relaxation method and with data recently produced by other workers.

19053 **(BNL—32343) Simultaneous electron capture and excitation in ion-atom collisions.** Tanis, J.A.; Bernstein, E.M.; Graham, W.G.; Clark, M.; Shafroth, S.M.; Johnson, B.M.; Jones, K.; Meron, M. (Brookhaven National Lab., Upton, NY (USA); Western Michigan Univ., Kalamazoo (USA); New Univ. of Ulster, Coleraine (UK); North Carolina Univ., Chapel Hill (USA)). 1982. Contract AC02-76CH00016. 4p. (CONF-821123—33). NTIS, PC A02/MF A01; 3. Order Number DE83005799.

From 7. conference on the application of accelerators in research and industry; Denton, TX, USA (8 Nov 1982).

Paper copy only, copy does not permit microfiche production.

A review of recent efforts to observe simultaneous electron capture-and-K-shell excitation in ion-atom collisions is presented. This process which has been referred to as resonant-transfer-and-excitation (RTE), is qualitatively analogous to dielectronic recombination (inverse Auger transition) in free-electron-ion collisions, and, hence, is expected to be resonant. Experimentally, events having the correct signature for simultaneous capture-and-excitation

are isolated by detecting projectile K x rays in coincidence with ions which capture a single electron. In a recent experiment involving 70-160 MeV S^{12+} ions incident on Ar, a maximum was observed in the yield of projectile K x rays associated with electron capture. This maximum is attributed to simultaneous capture - and excitation. The position (120 MeV) and width (60 MeV) of the observed maximum are in good agreement with theoretical calculations. The data indicate that RTE is an important mechanism for inner-shell vacancy production in the energy range studied.

19054 (CONF-820131—, pp 78-87) **Perturbed stationary-state description of the polarization effect in innershell ionization.** Basbas, G. (Physical Review Letters, Ridge, NY); Land, D.J. Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

A one-parameter trial initial-state wavefunction correlated to a projectile (polarized) is described and used to calculate innershell ionization cross sections for collisions with heavy charged particles. The variational principle is used to determine the parameter. The minimized energy gives the binding effect as a function of projectile position. Existing codes can be readily adapted to incorporate the trial wavefunction. Comparison with the previous theory of the polarization effect is made. Results for K-shell ionization of titanium by protons in the 0.3 to 2.4 MeV energy range agree with measured values.

19055 (CONF-820131—, pp 197-208) **Calculation of the equilibrium mean charge of helium ions.** Kaneko, T.; Ohtsuki, Y.H. (Waseda Univ., Tokyo, Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Z_2-oscillation of the equilibrium mean charge of 1 MeV He ions discovered by experiments is confirmed by calculating both the electron-capture and -loss cross sections, employing two-state atomic expansion method and Born approximation, respectively. Our calculations are in good agreement with the experimental results.

19056 (CONF-820131—, pp 209-213) **Medium dependence of charge state fractions of MeV He beam.** Fukuzawa, F. (Kyoto Univ., Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

We have measured the charge state fractions of He ions in the energy range 0.5 to 2.3 MeV by means of backscattering method. The charge states and energies of scattered He ions were analyzed with the combination of magnetic deflection and a position sensitive solid state detector. In this method we can use thick targets and therefore we can easily obtain the data over various kinds of target materials. In addition to the benefit for preparing the target without difficulty, thick targets can be treated easily such that they can be heated up and also evaporated on the surface without destroying the condition of data acquisition. Results are presented. (WHK)

19057 (CONF-820131—, pp 214-221) **Charge state distribution of light ions at glancing collision with solid surface.** Mannami, M.; Kimura, K.; Kuwata, N. (Kyoto Univ., Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Many experimental results have suggested that the charge state distribution of ions have penetrated through solid is different from that inside the solid. It is important to clarify the physical process taking place at solid surface in order to know the states of ions inside the solid from those observed outside the solid. In the present paper, we report our measurement of charge state distributions of He^+ and H_3^+ ions having been scattered in small angles (less than 4°) at surfaces of Au, Ag and C. One of the advantages of the use of the glancing collision of ions at solid surface for the study of ion-surface interaction is that the dwell time of ion near solid surface can be made more than 100 times longer than that in normal transmission experiments. The longer dwell times may alter any contribution of solid surface to electron capture and loss of ions. (WHK)

19058 (CONF-820131—, pp 222-255) **Interactions of fast molecular ions traversing thin foils. The contribution from field ionized Rydberg atoms in measurements on convoy electrons.** Gemmell, D.S. (Argonne National Lab., IL). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Experiments with fast (MeV) molecular-ion beams offer many attractive possibilities for studying atomic collisions in solids. Of particular value in such experiments is the possibility of determining the force fields (primarily in the induced electric field) that surround ionic fragments traversing a solid. One has the opportunity to evaluate these fields not just at the fragments themselves (as one would, for example, in stopping-power measurements with monatomic projectiles) but in the spatial regions extending out to several Angstroms from the fragment positions. In this paper we give a brief introduction to the subject and present some recent results.

19059 (CONF-820131—, pp 256-269) **Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons.** Oda, N.; Yamazaki, Y.; Yamaguchi, Y. (Tokyo Inst. of Technology, Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Doubly differential electron spectra from thin carbon foils (2 to 20 $\mu g/cm^2$) bombarded with 0.8 MeV/amu H^+, H_2^+, H_3^+, and $^3He^+$ ion beams have been measured in the angular range 15° to 30°. A predominant group of electrons whose velocities are centered about the ion velocity (convoy electrons) is observed even at these large angles, for thinner foils with molecular ions H_2^+ and H_3^+. The yield of convoy electrons for H_3^+ is always larger than that for H_2^+ and both yields are strongly dependent on foil thickness. Our results for H_3^+ and H_3^+ are consistent with the model that the electron loss process is the dominant mechanism for producing convoy electrons.

19060 (CONF-820131—, pp 270-282) **Interaction of hydrogen molecular ions with thin foils. II. Balmer emission.** Kobayashi, H.; Oda, N. (Tokyo Inst. of Technology, Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Relative emission yields of Balmer α, β, γ, and δ lines as functions of the dwell time, t/sub D/, in thin carbon foils have been measured with beams of H^+, H_2^+, and H_3^+ impinging on thin carbon foils (2 to 37 $\mu g/cm^2$) at 0.5 and 0.8 MeV/amu. Large molecular enhancement of emission yields of Balmer lines has been observed for H_2^+ and H_3^+ beams, where (i) the molecular enhancement for H_3^+ is higher than that for H_2^+ over both the range of the corresponding principal quantum number (n = 3, 4, 5, and 6) and the range of the dwell time measured (t/sub D/ = 0.97 to 12.3 fs), and (ii) the molecular enhancement for both H_2^+ and H_3^+ rapidly increases when the dwell time decreases to values less than ~ 2 fs. Relative populations of n levels in hydrogen have been derived from the relative yields of Balmer lines as functions of n and the dwell time t/sub D/. The molecular enhancement for relative populations is compared with the molecular enhancement for the other kind of quanity such as the neutral hydrogen yields.

19061 (CONF-820131—, pp 283-292) **Interaction of hydrogen molecular ions with thin foils. III. Inner-shell ionization.** Yamazaki, Y.; Oda, N. (Tokyo Inst. of Technology, Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

From measurements of electron spectra ejected in the backward direction from oxidized aluminum foil, it was found that H_3^+ ions (0.8 to 1.2 MeV/amu) produce (1.4 to 1.6) +- 0.2 times as many Al-$L_{2,3}$ VV Auger electrons per proton as H^+ ions do at the same velocity. This enhancement of the Auger electron yield for H_3^+ ions is mainly attributable to the vicinage effect of the constituent nuclei of molecular ions. The contribution of the projectile

bound electrons to the Auger electron production is estimated to be unimportant under the present experimental conditions. Appreciable molecular enhancement of Auger electron yield was not observed on similar measuresments on Auger electrons from oxide free aluminum and carbon foils.

19062 (DOE/ER/04974—5) Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983. Greene, E.F. (Brown Univ., Providence, RI (USA)). Jan 1983. Contract AC02-78ER04974. 11p. (COO—4974-5). NTIS, PC A02/MF A01. Order Number DE83006820.

The first measurements of the angular distribution of He and Ar atoms scattered from the surfaces of LiF and graphite cyrstals have been obtained. Narrower velocity distributions for the beams incident on the crystal would be desirable and are expected from modifications now being made. The yield of ions formed when beams of Cs, K, Na, and Li atoms hit silicon(100) and (111) surfaces are used to follow the kinetics of desorption of the atoms and to deduce information about how they move across the surfaces and diffuse into the bulk of the crystal. In addition study of the desorption reveals phase transitions in the surface and information about its structure. The decomposition of tetramethyldioxetane can be activated by collision of an energetic molecule with a surface. The reaction is followed by detecting the light emitted from one of the products, an excited molecule of acetone. The intensity of the light varies markedlly with the nature of the surface and the kinetic energy of the incoming molecule. A simple, equilibrium model helps to clarify the nature of the compensation effect in the kinetics of heterogeneous reactions.

19063 (DOE/ER/06036—2) X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982. Watson, R.L. (Texas A and M Univ., College Station (USA). Cyclotron Inst.). Feb 1982. Contract AS05-78ER06036. 94p. NTIS, PC A05/MF A01; 1. Order Number DE82009013.

Portions re illegible in microfiche products.

Work on x-ray emission in heavy-ion collisions has concentrated on two general areas: (a) studies of fast electron rearrangement following multiple K plus L-shell ionization, and (b) environmental influences on x-ray emission from few-electron ions. With regard to the former topic, a study of fluorine K x-ray spectra excited by 5.5 MeV alpha particles in a series of alkali and alkaline earth fluorides was completed. This work resulted in the discovery of a resonant electron transfer mechanism associated with the formation of a molecule-ion between adjucent cation and anion sites. Concerning the second topic area, two projects were completed this year. The first involved high resolution K x-ray angular distribution measurements for H- and He- like sulfur and the other involved a study of dynamic screening energy shifts and collision broadening of 2p-1s transitions in 2-MeV/amu H- and He^- like Ne, Mg, and S ions. Manuscripts describing both of these projects are included in the appendix. Brief descriptions of the projects which are currently in progress are given. (WHK)

19064 (DOE/ER/10514—T1) Atomic physics of strongly correlated systems. Progress report, August 1, 1982-July 31, 1983. Lin, C.D. (Kansas State Univ., Manhattan (USA). Dept. of Physics). Jan 1983. Contract AC02-79ER10514. 16p. NTIS, PC A02/MF A01. Order Number DE83006562.

During the reported period we continued the study of basic atomic 3-body problems along two lines: (1) the understanding of radial and angular correlations between two excited electrons; and (2) calculations of reliable excitation, ionization and charge transfer cross sections in ion-atom collisions from intermediate to low energies. In item (2), we have modified our so-called AO+ code to include ionization channels (represented by pseudostates), so that excitation, ionization and charge transfer are all incorporated in our model. This is a necessary step since all these processes are coupled for ion-atom collisions at intermediate velocities. In item (1), we have made further progress in understanding the correlation patterns of two highly excited electrons. We have examined the conventional configuration-interaction approach for doubly excited states and have compared it with our adiabatic approximation in hyperspherical coordinates. We have also made some preliminary study in understanding the Stark effects of H^- resonances and generalized the hyperspherical coordinates approach to two-valence-electron systems like Li^- and Be.

19065 (DOE/ET/33066—T1) Generation and identification of U III lines. Final technical report. Schneider, R.T. (Florida Univ., Gainesville (USA). Dept. of Nuclear Engineering Sciences). Nov 1982. Contract AS05-80ET33066. 85p. NTIS, PC A05/MF A01; 1. Order Number DE83005228.

Portions are illegible in microfiche products.

The gA values for UIII 4168.07A and UIII 4202.73 were determined, although these lines are not classified yet and the excitation energies are not known. Therefore the numbers obtained for the gA values are subject to revision as seen as better values for the excitation energies and the partition functions become available. For this reason we feel it would be premature to quote an error estimate for the obtained values (other than that the order of magnitude is correct). However, if the quoted values are used in combination with the proposed values for the excitation energies, a user will be able to perform plasma diagnostics on a uranium plasma and determine the UIII concentration within a factor of 2, assuming he operates close to the temperature range covered by this work.

19066 (INIS-SU—115, pp 507-511) Green function method for atom Coulomb excitation problem. Ryabov, V.A.; Yudin, G.L. 1981. (In Russian). NTIS (US Sales Only).

From 10. conference on problem of charged particle beams using for studying substance composition and properties; Moscow, USSR (28 May 1979).

Theoretical calculation of the dependence of the atom excitation probability on the impact parameter of a charged projectile is carried out. The calculation is based on the classical description of the relative motion in the collid+ng systems. In the approximation of the straight-line trajectory and constant velocity of the projectile, the transition amplitudes are calculated in the first order with respect to the interaction between an atomic electron and a moving Coulomb center. The stopping on a hydrogen-like atom is considered. The precise compact solution of the stopping of a fast charged particle on an electron localized in a point potential is presented (the negative ion case).

19067 (INIS-SU—119, pp 46-48) Hartree-Fock-Rothaan calculation of electric dipole moments of ground states of hydrides of the elements of the second and third periods. Gusejnov, I.I.; Sadykhov, F.S.; Mursalov, T.M.; Imamov, Eh.M.; Dzhafarov, G.M. 1981. (In Russian). NTIS (US Sales Only).

In Physics of atoms and elementary particles. Semantic collection of scientific papers.

Electric dipole moments of ground states at k=1 for the case of hydrides of elements of the second and third periods of the periodic table have been calculated. General programs for the calculation of integrals of electric multipoles in the FORTRAN language have been drawn up. Used were the Slater functions and their coefficients in linear combinations obtained by the solution of the Hartree-Fock-Roothaan equation for the above molecules. The calculated and experimental values have been compared. It is noted that the method of the multiconfiguration theory of a self- consistent field can give a better agreement with the experiment.

19068 (MPIS—31/1980) Measurement of the differential scattering cross sections of electron excited sodium by argon. Liedtke, R. (Max-Planck-Institut fuer Stroemungsforschung, Goettingen (Germany, F.R.)). Dec 1980. 70p. (In German). NTIS, PC A04/MF A01.

Differential scattering profiles with thermal energy caused by electron excited sodium by argon was measured. A grouping of crossed molecular beams was applied. A combination of Langmuir-Taylor detectors with a particle multiplier allowed measurement improvement of dissolving capacity which is needed to measure fast oscillation. The dominating elastic process allows concentration on classic scattering theory.

19069 (MPIS—32/1980) Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/s, 2/super 3/s) state with Ar in the thermal energy range. Burdenski, S. (Max-Planck-Institut fuer Stroemungsforschung, Goettingen (Germany, F.R.)). Dec 1980. 84p. (In German). NTIS, PC A05/MF A01.

Integral profiles of total and Penning ionization profiles of the He - Ar were measured by singlet and triplet system. Collision with good velocity resolution of ionization profiles were determined. It is found that it is possible, despite the simplicity of the two body impact, to apply a theoretical curve on measurements of complicated anelastic processes. One channel measurements rated two very interdependent dimensions providing the real component and the imaginary component of the potentials.

19070 Stochastic calculation of interaction energies. Alder, B.J. (Lawrence Livermore National Lab., CA); Ceperley, D.M.; Reynolds, P.J. *Journal of Physical Chemistry;* 86: No. 7, 1200-1204(1 Apr 1982). (CONF-8106216—). Contract W-7405-ENG-48.

From International symposium on new directions for the molecular theory of gases and liquids; Madison, WI, USA (18 Jun 1981).

A Monte Carlo method by which the properties of a collection of interacting nuclei and electrons might be accurately calculated is briefly outlined. This method allows quantitative determination of the pairwise intermolecular potential and potential surfaces but eliminates the use of these constructs for dense systems. Preliminary results on the electron gas, hydrogen solid, and the molecules He_2, LiH, Li_2, and H_2O are at least as accurate as the best previous work.

We present here a progress report on an experiment to measure the cross section for nu/sub μ/e scattering at the Brookhaven AGS. A wide band focussing horn is used with a neutrino beam energy centered at 1.5 GeV. We have in hand measurements with nu/sub μ/ and anti nu/sub μ/ beams but we present preliminary data on the nu/sub μ/ beam running only. We also measure the reactions: nu/sub μ/ + n → μ^- + p and nu/sub e/ + n → e^- + p which will be used in normalization and in background estimation.

Theses (D. es Sc.).

The mean inclusive reactions in the K^-p interactions at 70 GeV/c have been studied. The inclusive cross sections and multiplicities of the pion and neutral kaons are determined and compared to various models. Invariant and noninvariant differential cross sections are presented as a function of the usual kinematic variable and compared to the lower energy data. Aspects connected to the quark structure of hadrons are then studied in more details. The relevant fragmentation functions Dsub(q)sup(π) and Dsub(qq)sup(π) deduced from the pion differential cross sections are compared to the results obtained in leptonic interactions. The (1 - 'x')sup(m) behaviour of the reduced longitudinal momentum distributions is analyzed and compared to the production of the quark counting rules. The shape and the energy dependence of transverse momentum distributions are analyzed in the framework of the quark and hard scattering models. The increase with energy of the mean transverse momentum is finally compared to the corresponding increase (with respect to the hadronic shower energy) observed in leptonic interactions.

This report gives a short summary of experiments in progress and of approved proposals of experiments to be performed by the Elementary Particle Physics Department of Saclay, and also publication lists and informations about the Department activities during 1980 and 1981. In the introduction of chapters concerning physics, special effort has been made to explain in simple terms the main concepts of this field.

19077 (DESY—82-051) Electroweak effects in e^+e^- annihilations. Naroska, B. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Aug 1982. 31p. (CONF-8206110—4). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83750162.

From Symposium on production and physics of highly charged ions; Stockholm, Sweden (1 Jun 1982).

Data on e^+e^- annihilation into $\mu^+\mu^-$, tau^+tau^-, and qanti q were used to test electroweak theories up to an s approx. equal to 1200 GeV^2. The following results were obtained: 1) The PETRA experiments clearly demonstrated a forward backward asymmetry in the angular distribution of μ pairs. The combined value is A = -

(11.9 +- 1.5)% to be compared to -9.3% predicted by the standard model using sin²THETAsub(w) = 0.23. The PEP experiments agree with this result, although they are also compatible with pure QED due to their lower cms energy and larger errors. 2) The angular distributions of tau pairs are compatible with the standard model but also with pure QED due to larger errors. 3) The total cross sections, both for μ and tau pairs, agree with QED and the standard model, which for sin²THETAsub(w) = 0.23, still coincides with QED at present energy. 4) The weak coupling constants were determined, the average PETRA values are hsub(VV)/4 = -0.01 +- 0.03 and hsub(AA)/4 = 0.33 +- 0.04. This result picks out one of the two solutions obtained in upsilone scattering and ed scattering results. 5) The total cross section for the production of hadrons was analysed in the framework of the quark parton model, taking into account QCD corrections and weak contributions using the standard model. The data agree with the predictions using Λsub(QCD) = 0.3 (which corresponds to αsub(s) = 0.17 at cms energy of 34 GeV) and sin²THETAsub(w) = 0.23.

19078 **(DESY—82-052) Measurement of R in e^+e^- annihilation for $\sqrt{s}$ between 7.4 and 9.4 GeV.** Niczyporuk, B.; Jakubowski, Z.; Nowak, G.; Folger, G.; Lurz, B.; Volland, U.; Wegener, H.; Bienlein, J.K.; Graumann, R.; Trost, H.J. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Aug 1982. 38p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83750167.

LENA Collaboration.

The ratio R = sigma($e^+e^- \rightarrow$ hadrons)/sigma($e^+e^- \rightarrow \mu^+\mu^-$) was measured with the LENA detector at DORIS in a scan between 7.40 and 7.48 GeV and between 8.67 and 9.43 GeV center of mass energies. Corrected for QED radiative effects, R is found to be constant with an average value of R = 3.37 +- 0.06sub(stat.) +- 0.23sub(syst.). No narrow resonances with GAMMAsub(ee)(GAMMAsub(had)/GAMMAsub(tot)) >= 0.30 keV (95% C.L.) and no steps have been observed. Based on this value of R, revised values for UPSILON (1S) resonance parameters are presented.

19079 **(DESY—82-055) Observation of topologically isolated energetic electrons.** Behrend, H.J.; Chen, C.; Fenner, H.; Schachter, M.J.; Schroeder, V.; Sindt, H.; D'Agostini, G.; Apel, W.D.; Banerjee, S.; Bodenkamp, J. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Aug 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83750164.

CELLO Collaboration.

In e^+e^- interactions at 34 GeV center of mass energy, using an integrated luminosity of 7.4 pb^{-1}, 18 events are observed where an electron (positron) appears with an energy above 4 GeV, at large angle with respect to the beam direction, and well separated from other emerging charged and neutral particles. The characteristics of these events are found to be in agreement with the event characteristics expected from deep inelastic electron photon scattering and inelastic Compton scattering, together with at most a small contribution from multihadron annihilation.

19080 **(DOE/ER/03072—T7) High Energy Physics Division Research Highlights.** Shoemaker, F.C. (Princeton Univ., NJ (USA). Dept. of Physics). 1 Feb 1983. Contract AC02-76ER03072. 5p. NTIS, PC A02/MF A01. Order Number DE83006326.

Summary comments are made on research performed from August 1, 1982 through January 31, 1983 in these areas: rare muon induced reactions; search for new particles in the reaction π-p→n + protons; production of high-mass dimuons by pions; production of high mass mu pairs in the forward direction in the π-nucleus collisions; a report on the crystal ball detector; a proposed experiment at LEP; and hadronic production of charmed particles. (GHT)

19081 **(DOE/ER/10667—3) Studies of the applicability of optoelectronic devices for instrumentation in high-energy physics. Progress report, June 1, 1982-May 31, 1983.** Cleland, W.E.; Coon, D.; Engels, E.; Shepard, P.; Thompson, J. (Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy). Jan 1983. Contract AC02-80ER10667. 47p. NTIS, PC A03/MF A01; 1. Order Number DE83006904.

Portions are illegible in microfiche products.

The new program is a study of direct photon physics, both at the ISR and the Tevatron. In addition, there is an effort to search for fractional charges in semiconductors, which has strong technical ties to our R and D efforts in the semiconductor detectors required for E706. The production of single direct photons is regarded as a good testing ground for QCD. According to our present understanding, the basic interactions that are responsible for this process, to first order, are the QCD Compton process qg→γq and the annihilation process q anti q→γg. Study of the former process will give information on the gluon structure function, while the latter will yield information on the gluon fragmentation process. A third process which yields single photons is the bremsstrahlung diagram, but preliminary data from R807 indicates that it is small. To separate the contribution of the remaining two diagrams, the pp and p anti p direct single photon production can be compared, since the former has no contribution from the annihilation diagram, apart from the contribution from the sea. Also, direct single photon production in π^+p and π^-p interactions can be compared, which have identical contributions from the Compton diagram but different contributions from the annihilation diagram. Because we are involved in both R807/808, which will study pp and p anti p interactions and E706, which will study π^+p, π^-p, and pp interactions, we expect to be in a position to make a detailed study of the gluon structure function. In addition to single photon production, both experiments plan to study events with both $\gamma\gamma$ and e^+e^- final states, which should permit similar systematic comparisons to be made for a study of the Drell-Yan and related processes.

19082 **(DOE/ER/71017—T2) DOE Contract DE-AT03-78ER71017 (formerly EY-76-C-03-0010, PA 17). Final report.** Stork, D.H.; Ticho, H.K. (California Univ., Los Angeles (USA). Dept. of Physics). 1981. Contract AT03-76ER71017. 25p. NTIS (US Sales Only); 2. Order Number DE82016173.

Microfiche only, copy does not permit paper copy reproduction.

Progress is summarized on the following research areas: direct electron production at SPEAR (SLAC Experiment SP25: DELCO); pion and kaon form factor experiments; and time projection chamber development. (WHK)

19083 **(ITEF—2(1982)) Resonance structure of the Λ anti Λ system in π^-p interactions at 40 GeV/c (π^-p → Λ anti Λ n reaction).** Baloshin, O.N.; Barkov, B.P.; Bolonkin, B.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 43p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700247.

26 refs.; 11 figs.; 6 tabs.

Effective mass spectrum and angular distributions of 322 events of the π^-p→Λ anti An reaction at 40 GeV/c momentum have been obtained. Resonance structures for 2295, 2400, 2535 (with possible branching to 2495 and 2564) and 2802 MeV masses have been found. The most probable values of quantum numbers for the found resonances have been determined as 2^{++}, 0^{-+}, 6^{++} (3^{--} and 6^{++}), correspondingly, on the basis of analysis of angular momenta using the common systematics of meson resonances. Values of resonance decay widths are given. Confirmation of earlier observed resonance structure with 3437 MeV mass has been obtained.

19084 **(ITEF—4(1982)) Proton and neutron yields from nuclei and from separated nickel and tin isotopes.** Bayukov, Yu.D.; Vlasov, A.V.; Gavrilov, V.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700288.

6 refs.; 6 figs.

Proton and neutron yields from various nuclei under the effect of 7.5 GeV/c protons are measured and discussed. Main attention is given to data obtained on ^{58}Ni, ^{64}Ni, ^{112}Sn, ^{124}Sn separated isotopes. It is shown that with growth of neutron content of isotope proton yields practically remain unchanged while the neutron yields increase.

19086 (ITEF—5(1982)) Masses of charmed particles, decay modes and lifetimes. Vajsenberg, A.O. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 45p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700248.

53 refs.; 12 figs.; 6 tabs.

Basic characteristics of charmed particles obtained up to the middle of 1981 are discussed in the survey. Stated in brief are main predictions of the theory on charmed particles properties. Experimental data on masses, decay modes and lifetimes of D and F mesons as well as charmed baryons are considered. Basic experiments are described. It is pointed out that in the experiments single and pair production events as well as charmed particle decay have been observed. The charmed particles lifetime lies within the limits of 10^{-12} - 10^{-13}C. The lifetime of D^{+-} mesons is approximately three times longer than the D^0 mesons lifetime. The lifetime of F mesons and Asub(e) baryons is close to D^0 mesons lifetime.

19086 (ITEF—81(1981)) Data analysis on hadron absorption cross section by nuclei at 5-400 GeV. Vajsenberg, A.O.; Lepikhin, Yu.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 22p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700289.

11 refs.; 3 figs.; 12 tabs.

For the purpose of determining parameters characterizing the nuclear matter distribution the basic experimental data on π^{+-}, K^{+-} meson, p and anti p absorption cross sections by nuclei up to 400 GeV energies obtained after 1970 are considered. The data analysis from the optical model viewpoint allows determining nuclear density parameters and σ_0 and α parameters dependence in the approximation of σsub(A)=σsub(0)Asup(α) absorption cross section on hadron-nucleon cross sections as well as estimating the agreement degree of data obtained in the course of various experiments. The performed analysis has shown: the analytical expressions obtained describe the totality of experimental data on hadron absorption cross section by nuclei with A>=64 in the momentum range approximately 5-400 GeV/c with approximately 5% accuracy. Under the description accuracy obtained the values of nuclear density parameters are equal r_0=1.17 + 0.02 PHI and tau=0.45+0.03 PHI. These values differ from average values r_0 approximately 1.08 PHI and tau=0.535 PHI obtained in experiments electron scattering by nuclei. It follows from the performed analysis and experimental data that at large values σsub(h)>45 mbarn (hadron - nucleon interaction total cross section) the α parameter takes the values less than 2/3. Thus the effect of a nucleus smeared edge distinctly observed for antiprotons is manifested.

19087 (ITEF—146(1981)) Properties and interactions of neutrino (1977-1980). Charm production. Tsukerman, I.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 25p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700246.

35 refs.; 7 figs.; 6 tabs.

The review of experimental data on charm production in neutrino interactions for the 1977-1980 period is presented. Estimates of charm production cross sections are given. Preliminary estimates of charmed D-mesons lifetime are fulfiled. Obvious cases of production of identified charmed Σ, Λ and D - resonances are discussed. Experiments on observing Λ, D and F - resonances decays and lifetine data are considered.

19088 (ITEF—147(1981)) Proton emission in the pion-nucleus interactions which reduce to production of πi π^- system. Vorob'ev, I.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 22p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700287.

17 refs.; 8 figs.; 3 tabs.

For the purpose of investigating the characteristics of protons emitted in quasinucleon and deep inelastic nuclear interactions the exclusive reaction $\pi^+ + A \rightarrow \pi^+ + \pi^- +$ kp(k=0.12...) + A' is studied. The reaction has been studied on the carbon-xenon nuclei mixture for an incident π^{+-} meson momentum of 2.9 GeV/c. Cases of proton emission in deep inelastic nuclear interactions are considered. The following distributions of accompanying protons are given in a graphical form: by multiplicity of all protons emitted in the reaction and by multiplicity of protons with the kinetic Tsub(p)>=20 MeV, by momentum spectra and by angles of accompanying protons escape. The obtained momentum and angular proton spectra with 300-600 MeV/c (energies approximately 50-175 MeV) are in a satisfactory agreement with the corresponding inclusive spectra. o noticeable dependence ofn proton emission with energy approximately 50-175 MeV on the reaction channel is manifested. On the contrary, such dependence is noticeable for lower energy protons. Deep inelastic events selected by kinematic characteristics of the $\pi^+\pi^-$ system comprise about 90% of cases with proton backward emission at >=300 MeV/c. These cases for the given nuclei mixture constitute 26+2% of deep inelastic interactions. The proton backward emission is bound to the emission of several protons in the event. The events selected as quasinucleon ones comprise on the average approximately one proton. In 22+2% of quasinucleon cases there are additional accompanying protons (from them in 11+-1% of cases all accompanying protons have the momentum <200 MeV/c. The momentum and angular spectra of accompanying protons are obtained. In 14+3% of quaisinucleon cases the proton, owing to secondary interactions, "disappears".

19089 (JINR—E-1-81-776) Search for multiquark resonant states of hypercharge Y > 1. Shahbazian, B.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1981. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700249.

14 refs.; 14 figs.

A wide class of exotic states has been investigated. The aim of this work is the search for multiquark resonant states of Y>1 hypercharge. It was performed by the analysis of invariant mass spectra of systems with exotic quantum numbers. The necessary information was obtained in analysing the pictures from the JINR propane bubble chamber exposed to negative pion and neutron beams of 4.0 and 7.0 GeV/c, respectively. No resonance like enhancements were observed in any of systems of hypercharge up to Y=6. This result was confirmed in a series of experiments of other authors, performed with diverse research technique. The conclusion is: the hypercharge of hadron resonances cannot exceed one-Y<=1.

19090 (JINR—R-1-81-556) Observation of pion excited state- a new pseudoscalar meson. Anan'eva, M.A.; Vasilevskij, I.M.; Belini, D.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1981. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700291.

4 refs.; 2 figs.; submitted to the journal JETP Lett. and 6. All-union conference on problems of high energy physics, Dubna, 1981.

Performing a partial wave analysis of the $\pi^+\pi^-\pi^-$ system produced in a diffraction dissociation of an incident 40 GeV/c π^- meson on Be, C, Al, Si, Ti, Cu, Ag, Ta, Pb nuclei a new pseudoscalar meson of 1.205+-0.007 GeV/c^2 mass and of 0.320+-0.035 GeV/c^2 width with pion quantum numbers which are radial excitations of quark structure of pion has been observed. The experiment has been carried out using JINR magnetic spectrometers on Serpukhov accelerator. 110,000 events have been analysed. As a result, it has been observed that phase variation of the 3π system with O^-S quantum numbers is 85 deg on the width of resonance and it is constant relative to resonance phase of 1^+S wave. Mass spectra of the O^-S state are well described by the Breit-Wigner relativistic formula with slowly varying exponential background.

19091 (LAL—81-32) New results from PETRA on fragmentation and neutral particles production. Fournier, Daniel. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Oct 1981. 26p. (CONF-810895—18). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700250.

From International symposium on lepton and photon interactions at high energies; Bonn, F.R. Germany (24 Aug 1981).

New results on the neutral component of jets are presented, including first measurements of π^0 production. Then a short review is made of the description of multihadronic events by first order QCD and fragmentation models, and some differences between the Lund and Feynman-Field models are analyzed.

19092 (LAPP-EXP—82-01) Deep inelastic scattering. Aubert, J.J. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). 1982. 30p. (In French). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700251.

Deep inelastic lepton-nucleon interaction experiments are reviewed. Singlet and non-singlet structure functions are measured and the consistency of the different results is checked. A detailed analysis of the scaling violation is performed in terms of the quantum chromodynamics predictions.

19093 (LAPP-EXP—82-02) Charmonium spectroscopy at the CERN ISR using an antiproton beam and a hydrogen jet target. Bassompierre, G. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jan 1982. 8p. (CONF-820143—5). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700252.

From 17. Recontre de Moriond workshop on new flavours; Les Arcs, France (24 Jan 1982).

It is proposed to install a H2 jet target in a straight section of the CERN ISR. The collisions between circulating anti p and the protons in the jet lead to the formation of charmonium states. In particular those which are not directly accessible in e^+e^- annihilation will be studied. The good momentum definition of the cooled anti p beam will allow a precise measurement of the width of these states. Electromagnetic decay channels giving a clean signature of such states will be measured and an apparatus based on calorimetry has been designed.

19094 (LBL—14585) Total and inclusive hadron production by e^+e^- annihilation at $\sqrt{S}$ = 5.2, 6.5 and 29.0 GeV. Patrick, J.F. (Lawrence Berkeley Lab., CA (USA)). Jul 1982. Contract AC03-76SF00098. 116p. NTIS, PC A06/MF A01; 1. Order Number DE83005872.

Portions are illegible in microfiche products. Thesis.

Measurements are presented of R, the ratio of the total hadronic cross section to the cross section for mu pair production, and of the inclusive charged particle momentum distribution so σ/dx for e^+e^- annihilation at center of mass energies of 5.2, 6.5, and 29.0 GeV. The ratio R is found to be approximately 3.9, consistent with quark-parton model expectations, at each of the three energies with an estimated systematic uncertainty of 6%. The inclusive cross sections show significant deviation from the scaling behavior predicted by the quark-parton model.

19095 (LPC-T—81-03) Study of the multimuon event production in the hadronic interactions at 150 and 280 GeV/c. Tilquin, Andre. (College de France, 75 - Paris. Lab. de Physique Corpusculaire; Paris-6 Univ., 75 (France)). May 1981. 206p. (In French). NTIS (US Sales Only), PC A10/MF A01. Order Number DE83700253.

These (3. Cycle).

In pion-nucleon interactions at 150 and 280 GeV/c, we study 3 muon events. Among these we show the significance of correlated psiμ^{+-} events, which may be interpreted as psiDantiD events. In this hypotheses, we estimate the total π-nucleon → psiDantiD + X cross-section to the range from 2 to 10 nbarns. The study of the few 4 muon events indicates simultaneous production of 2 psi's with a large invariant mass and a low transverse momentum. This correlation indicates a common dynamical origin, with a π-nucleon → psi psi + X cross-section ranging in the 20 to 70 pbarns. Further study will be needed in order to refine these figures and to indentify positively the differents channels.

19096 (NASA-CR—161984) Development of a direct experimental test for any violation of the equivalence principle by the weak interaction. Final report. Parker, P.D.M. (Yale Univ., New Haven, CT (USA)). Dec 1981. 29p. NTIS, PC A03/MF A01.

Violation of the equivalence principle by the weak interaction is tested. Any variation of the weak interaction coupling constant with gravitational potential, i.e., a spatial variation of the fundamental constants is investigated. The level of sensitivity required for such a measurement is estimated on the basis of the size of a change in the gravitational potential which is accessible. The alpha particle spectrum is analyzed, and the counting rate was improved by a factor of approximately 100.

19097 (SLAC-PUB—2971) Observation of the radiative decay J/psi → γ eta $\pi\pi$. Newman-Holmes, C. (Princeton Univ., NJ (USA). Dept. of Physics; Stanford Linear Accelerator Center, CA (USA)). Sep 1982. Contract AC03-76SF00515. 8p. (CONF-820718—28). NTIS, PC A02/MF A01. Order Number DE83007006.

From 21. international conference on high energy physics; Paris, France (29 Jul 1982).

The radiative decay J/psi → γ eta $\pi\pi$ has been observed in data taken with the Crystal Ball detector at the SPEAR e^+e^- storage ring. In addition to the well-known eta', the eta $\pi\pi$ mass spectrum shows a broad enhancement centered at ~ 1700 MeV. There is no explicit evidence for the I(1440) in the eta $\pi\pi$ mass spectrum.

19098 Investigation of quark and diquark fragmentation in νp and anti νp charged current interactions in BEBC. Allen, P.; Graessler, H.; Lanske, D.; Schulte, R.; Boeckmann, K.; Geich-Gimbel, C.; Nellen, B.; Saarikko, H.; Grant, A.; Klein, H. Karlsruhe, Germany, F.R.; Fachinformationszentrum Energie, Physik, Mathematik (Oct 1982). 33p. (MPI-PAE/Exp.El.—106).

Aachen-Bonn-CERN-Muenchen (MPI)-Oxford Collaboration.

Distributions of Feynman-x have been determined for positive and negative pions in charged current neutrino-proton and antineutrino-proton reactions with hadronic energy W>3 GeV and Bjorken-xsub(B)>0.1. The distributions have been corrected for experimental effects such as measurement errors, uncertainties in estimating the n eutrino energy and particle misidentification. In the frame work of the quark-parton model the distributions yield information about the fragmentation of forward going u and d quarks and backward going uu and ud diquarks. Approximate Feynman scaling is observed for the invariant Feynman-xsub(F) distributions. They can be fitted by a power law of the form (1- vertical stroke xsub(F) vertical stroke)sup(n) as suggested by the dimensional counting rules. Simple isospin relations predicted by the quark-parton model are fulfilled. The fragmentation of diquarks is compared with that of protons into πsup(+-).

19099 (DESY—82-049) Introduction to the electroweak theory. Paschos, E.A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Aug 1982. 146p. NTIS (US Sales Only), PC A07/MF A01. Order Number DE83750163.

The author gives an introduction to the Weinberg-Salam theory. After a description of the electromagnetic and weak currents the construction of the theory on the base of the Yang-Mills theory using the Higgs mechanisms is described. Then some predictions of this theory are presented. Finally the renormalization is discussed.

19100 (DESY—82-053) Prediction of low-lying oddballs in lattice QCD. Ishikawa, K.; Teper, M.; Schierholz, G.; Sato, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Aug 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83750166.

We find, in a high precision Monte-Carlo calculation of the glueball mass spectrum in pure SU(3) lattice gauge theory, two low-lying oddballs with quantum numbers 0^{--} and 1^{-+}. We estimate their masses to be m(0^{--}) = (1.4sub(-.4)sup(+.6)) GeV and m(1^{-+}) = (2.4sub(-.21)sup(+.27)) Gev.

19101 (DOE/ER/03130—T9) Composite fermions and Higgs scalars, an explanation for multiple generations. McCabe, J.F. (Brown Univ., Providence, RI (USA). Dept. of Physics). 1981. Contract AC02-76ER03130. 15p. NTIS, PC A02/MF A01; 1. Order Number DE83007284.

Portions are illegible in microfiche products.

Theories with light composite fermions are proposed as an explanation for the observation of multiple fermion generations of very different mass. It is assumed that a hypercolor interaction forms the fermion bound states at zero mass. The masses of the light composite particles are due to explicit chiral symmetry breaking by weak interactions involving vectors and Higgs scalars. In particular, we consider a simple model of Weinberg that did not have Higgs scalars, and analyze the modifications that the Higgs scalars can give. The Higgs scalars allow us to avoid his problems with massless fermions and true Goldstone bosons, and offer an explanation for the observation of large fermion mass ratios.

19102 (FERMILAB-CONF—82/72) Contribution of twist-4 to the Q^2 evolution of F_2 and xF_3: an experimental review. Morfin, J.G. (Fermi National Accelerator Lab., Batavia, IL (USA)). Nov 1982. Contract AC02-76CH03000. 13p. (CONF-820675—6). NTIS, PC A02/MF A01. Order Number DE83007134.

From International conference on neutrino physics; Balaton, Hungary (14 Jun 1982).

The status of the theoretical and experimental study of higher twist contributions to the nucleon structure functions is reviewed. After noting the dangers of combining experiments with widely different $<Q^2>$ and targets, emphasis is placed on those results coming from a single experiment. The values of A, the twist-2 scale factor, and h_4, the coefficient of $x/Q^2(1-x)$, are restricted by: $\Lambda < 0.44$ GeV and $-0.2 < h_4 < 0.5$ GeV^2.

19103 (HE—99-1980) Simple and efficient method for determination of resonance parameters by Pade approximants. Nichitiu, F. (Institutul Central de Fizica, Bucharest (Romania)). Nov 1980. 15p. NTIS (US Sales Only), PC A02; 3. Order Number DE82903358.

Paper copy only, copy does not permit microfiche production.

We propose a simple and efficient method to determine the singularity parameters of the partial wave S matrix through data. The method is based on the use of Pade approximant of the seond type and its extension to chi^2 minimization. We apply the method to experimental data on the $\pi N(P_{33}, D_{13}, S_{11})$, $pp(^1D_2)$ and $\pi^4He(S,P,D)$ partial waves.

19104 (INIS-SU—119, pp 81-85) Pion electroproduction in the nucleon resonances region in quark model. Sadykhov, F.S.; Petrosyan, K.A.; Mikailov, R.I. 1981. (In Russian). NTIS (US Sales Only).

In Physics of atoms and elementary particles. Semantic collection of scientific papers.

Pion electroproduction on a nucleon in a quark model is studied. It is taken that during electron scattering with nucleon formed is the nucleon resonance N* with the following decay into nucleon and pion. It is considered that nucleon consists of three valent quarks and the quarks were considered as the Dirac free particles with spin 1/2. Considered were such a scheme of the electron scattering with nucleon, where the pion electroproduction can occur only in consequence of the gluon bremsstrahlung with the following decay of it into a quark- antiquark pair. Determined were the differential cross section of the pion electroproduction, probability and matrix element of decay $N^* \rightarrow N\pi$, dependence of the pion electroproduction cross section on the momentum trasfer square when transferring energy epsilon$_1$=1220 MeV. The experimental data agree well with the data obtained at a value of the constant of the quark- gluon interaction chemical bondsub(s)sup(2)=0.14.

19105 (INIS-SU—119, pp 21-30) Radiative production of anti pNsub(3/2)* - pair in electron-positron colliding beams. Mustafaev, V.Z.; Mukhtarov, A.I.; Abdullaev, S.K. 1981. (In Russian). NTIS (US Sales Only).

In Physics of atoms and elementary particles. Semantic collection of scientific papers.

The e$^-$e$^+$ → anti pN*sub(3/2)\ process is considered with provision for the polarization of initial leptons antiproton and photon. At that, the nucleon resonance is assumed to be infinitely narrow (zero-range approximation). The reaction is represented by two diagrams in the lowest order of perturbation theory. The matrix element of the process and differential cross sections at different escape angles and antiproton energies have been found. Polarization effects have been considered. Conclusions have been drawn that the A(s_1,s_2) symmetry does not depend on the energy and escape angle, equals 1 for the total longitudinal polarization of the e$^-$e$^+$ pair and is insignificantly small during the transverse polarization. The A(s_1, e) asymmetry does not depend on the angles and energies as well. The nature of the angular dependence of the Asub(L)(ssub(1), s) asymmetry depends on the antiproton energy very strongly. If the initial electron is completely polarized longitudinally and antiproton - transversely, the A(s_1, s) asymmetry will differ from zero in that case if the antiproton polarization vector is in the plane of its production. The Asub(T) asymmetry nature is different for different antiproton energies.

19106 (LAPP-TH—54) Toponium at hadronic colliders. Finjord, J.; Mery, P.; Girardi, G.; Sorba, P. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jan 1982. 16p. (CERN-TH—3229). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700242.

We calculate hadronic toponium production by specific diagrams obeying colour conservation and charge conjugation. The resulting rates, though lower than those calculated using semi-local duality arguments are encouraging and may allow for toponium discovery at hadronic colliders currently in development.

19107 (LYCEN—8166) Lepton and quark generations in the geometrical Rishon model. Elbaz, E.; Uschersohn, J.; Meyer, J. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Dec 1981. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700243.

We propose a concrete representation of leptons and quarks in different generations in the geometrical approach to the rishon model where rishons behave as the fundamental representations of the SU(3)sub(C) x SU(3)sub(H) group. The model allows a unified description of both hadronic and leptonic decays of elementary particles.

19108 (PB—82-253345) Hadron production in e+e- annihilation. Final report. Cashmore, R. (Oxford Univ. (UK). Nuclear Physics Lab.). 1982. 48p. NTIS, PC A03/MF A01.

The basis of a working model was reviewed for the description of the single-photon annihilation process for hadronic production in e(+)e(-) collisions, particularly at the high energies now available with the present storage rings. Considered in this were the total annihilation cross-section, multiplicity and neutral energy fractions, quark jets and their fragmentation properties, and multijet events, gluons and quantum chromodynamics (QCD). The conclusions were that the major process is quark-antiquark pair production; these quarks are pointlike, have spin 1/2, 3 colors and 5 flavors and are produced at a rate proportional to the squares of their charges. These quarks radiate gluons, of spin 1 and coupling constant (alpha sub s) about 0.12 to 0.17.

19109 Higher-order quantum-chromodynamic corrections to the third structure function of the photon. Sasaki, K. (Standford Univ., CA (USA). Standford Linear Accelerator Center). *Lettere al Nuovo Cimento;* **32**: No. 6, 175-180(10 Oct 1981).

In this short note the one-loop and two-loop anomalous dimensions relevant to the new gluon operator, which is typical of the photon structure function $W_3sup(\gamma)$ is calculated. The expressions of these anomalous dimensions turn out to be very simple. Using these results, I evaluate part of the next-to-leading-order corrections of asymptotic freedom to the structure function $W_3sup(\gamma)$.

19110 OZI rule and glueballs. Lindenbaum, S.J. (Brookhaven National Lab., Upton, NY (USA); City Coll., New York (USA)). *Nuovo Cimento [Sezione] A;* **65**: No. 2, 222-238(21 Sep 1981).

The OZI rule works rather well but is peculiar in that an OZI-forbidden process can proceed via two successive OZI-allowed processes. This implies circumventing the OZI-forbidden diagram and also implies violation of crossing symmetry and unitarity. These peculiarities of the OZI rule are attributed to the facts of life of color confinement. The patent failure of the OZI rule in $\pi^- p \rightarrow$phiphin is demonstrated in detail. It is pointed out that, within the contact of QCD, a logical explanation for this failure is the intervention of glueballs (multigluon resonances). A discussion of how the make and recognize glueballs and their importance to QCD is included.

19111 **Electromagnetic scaling of particle lifetimes and masses.** MacGregor, M.H. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Lettere al Nuovo Cimento;* **31**: No. 10, 341-346(4 Jul 1981).

Empirically, the lifetimes of the metastable elementary particles fall into characteristic clusters. They are spaced by characteristic powers of the fine structure constant. Elementary particle masses also exhibit a somewhat analogous scaling, although more fragmentary. The author attempts to delineate the phenomenological characteristics of these spacings and the provide some kind of a correlation for the clustering in terms of the properties of the particles involved.

19112 **Status of the mathematical and physical studies on the Lie-admissible formulations on July 1979, with particular reference to the strong interactions.** Santilli, R.M. (Harvard Univ., Cambridge, MA). *Hadronic Journal;* **2**: No. 6, 1460-2018(Dec 1979). (CONF-7908175—).

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

The first part of the paper presents a reveiw of the mathematical studies on Lie-admissible algebras conducted (a) via the theory of abstract algebras; (b) via a Lie-admissible generalization of Lie's theory, and (c) via a symplectic-admissible generalization of the symplectic geometry. The second part presents a review of the physical applications in: Newtonian mechanics; classical field theory; classical statistical mechanics; quantum mechanics; quantum field theory; and quantum statistical mechanics; with specific applications, such as: Bose-expansion theory in nuclear physics; renormalization theory; broken unitary symmetries for the classification of hadrons; etc. In the third part a number of open physical and mathematical problems are outlined.

19113 **Further studies on the recently proposed experimental test of Pauli's exclusion principle for the strong interactions.** Myung, H.C. (Univ. of Northern Iowa, Cedar Falls); Santilli, R.M. *Hadronic Journal;* **3**: No. 1, 196-255(Dec 1979). (CONF-7908175—). Contract AC02-78ER04742.

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

These mathematical results are subjected to the following physical speculations. It is pointed out that the mutations considered constitute a realization of the original proposal by one of us, according to which strong interactions provide a hierarchy of breakings of the SU(2)-spin symmetry, e.g., in the transition from the structure of nuclei, to the structure of hadrons, and to the structure of astrophysical bodies. According to this view, we have a very small mutation of the associative envelope of the SU(2)-spin 1/2 for the case of nucleons under very small state of penetration of their wave packets, as it occurs in the nuclear structure. We than pass to a finite mutation for the case of the constituents of hadrons. Finally, we have a very high mutation for the case of the constituents of astrophysical bodies.

19114 **Grand unified model with calculable masses.** Segre, G.; Weldon, H.A. (Univ. of Pennsylvania, Philadelphia). *Hadronic Journal;* **1**: No. 2, 424-452(Jun 1978).

A renormalizable unified gauge theory of weak, strong and electromagnetic interactions based on the group SU(6) is proposed. The model is consistent with present experimental data: its most interesting feature is that the e, d, u, s masses are all calculable by one loop diagrams as functions of heavier undetermined masses.

19115 **SU(3) symmetry breaking in the decays of baryons.** Dobson, P.N. Jr.; Pakvasa, S.; Tuan, S.F. (Univ. of Hawaii, Honolulu). *Hadronic Journal;* **1**: No. 2, 476-503(Jun 1978).

The currently fashionable treatment of the baryon resonances assumes they are strong mixtures of pure SU(3) states, with decay coupling constants determined by the unbroken symmetry. We wish to again espouse the idea that it is equally plausible that the states have negligible mixing, but decay interactions contain an explicit SU(3) symmetry breaking term. In particular, we revive a simple model for the symmetry breaking based on analogies with the weak decays of hyperons which we demonstrate is consistent with all the available data.

19116 **Need of subjecting to an experimental verification the validity within a hadron of Einstein's special relativity and Pauli's exclusion principle.** Santilli, R.M. (Harvard Univ., Cambridge, MA). *Hadronic Journal;* **1**: No. 2, 574-902(Jun 1978).

This paper is a call for theoretical and experimental studies on the problem whether the relativity and quantum mechanical laws which have proved so effective for the atomic as well as the nuclear constituents are truly verified also for the hadronic constituents. For the intent of stimulating these studies, this paper is devoted to the problem whether a violation of the laws considered in the arena considered is conceivable, plausible and quantitatively treatable on grounds of our current knowledge. This problem is studied according to a number of sequential steps. First, we conduct a critical analysis of the quark models on the hadronic structure to the effect of indicating that, perhaps, their known problematic aspects are only the symptoms of a much more fundamental problem of consistency at the level of the basic laws. By noting that the available unitary models produce a Mendeleev-type classification of hadrons of unequivocal physical effectiveness and of virtually conclusive character, we search for a compatible but fundamentally different model of structure along much of the differentiation between the problem of classification and that of structure which resulted as necessary at the atomic level.

19117 **Structure of semi-simple gauge groups for unified weak and electromagnetic interactions.** Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* **1**: No. 1, 77-100(Apr 1978). Contract AC02-76ER13065.

We investigate general structure of the gauge group C underlying the unified weak and electromagnetic interactions. Assuming that G is semi-simple, and that all quarks have only electric charges 2/3 and -1/3, we can prove that G for hadrons is essentially a product of groups SU(3l). Moreover, the underlying representations for the quark multiplets to be used must be completely antisymmetric ones with respect to the SU(3l) group. Also some restrictions of gauge groups for unified weak, electromagnetic, and strong interactions are discussed.

19118 **(DOE/ER/40017—5) Parity-violating weak neutral current effects in elastic e-^{12}C scattering. Progress report, March 1, 1982-December 31, 1982.** Lubell, M.S. (City Coll., New York (USA)). 31 Jan 1983. Contract AC02-81ER40017. 16p. NTIS, PC A02/MF A01. Order Number DE83007422.

As a means of investigating unified gauge theories of the electro-weak interaction we have been preparing an experiment for the Bates Electron Accelerator to determine the parity violating asymmetry A = (σ/sub R/ - σ/sub L/) for 30° elastic scattering by ^{12}C of 250 MeV longitudinally polarized electrons, where σ/sub R/ and σ/sub L/ are respectively the differential cross sections for electrons with right and left helicities. The asymmetry depends strictly on the isoscalar vector-hadronic coupling constant, and in terms of the Weinberg-Salam model is predicted to have a value of $\sim 2 \times 10^{-6}$ for our choice of kinematics. Central to the success of the measurement of such a small quantity is the use of an intense, highly stable source of polarized electrons. The progress in the de-

velopment of such a source, based upon photoemission from GaAs, is reviewed in this report.

19119 (BNL—32265) Testing the standard model. Gordon, H.; Marciano, W.; Williams, H.H. (Brookhaven National Lab., Upton, NY (USA); Pennsylvania Univ., Philadelphia (USA)). 1982. Contract AC02-76CH00016. Pp. (CONF-8206116—19). NTIS, PC A02; 3. Order Number DE83005149.

From DPF summer study on elementary particle physics and future facilities; Aspen, CO, USA (28 Jun 1982).

Paper copy only, copy does not permit microfiche production.

We summarize here the results of the standard model group which has studied the ways in which different facilities may be used to test in detail what we now call the standard model, that is SU/sub c/(3) x SU(2) x U(1). The topics considered are: W^{+-}, Z^0 mass, width; $\sin^2\theta$/sub W/ and neutral current couplings; W^+W^-, Wγ; Higgs; QCD; toponium and naked quarks; glueballs; mixing angles; and heavy ions.

19120 (DESY—82-054) Looking for the GUT monopole. Walsh, T.F. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Aug 1982. 8p. (CONF-820718—12). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83750165.

From 21. international conference on high energy physics; Paris, France (29 Jul 1982).

After a short theoretical description of monopoles in grand unified theories the author describes the experimental search for these monopoles.

19121 (FT—200-1981) Some classes of test functions for local fields. Dumitru, D.R. (Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)). Mar 1981. 9p. NTIS (US Sales Only), PC A02/MF A01; 1. Order Number DE82903388.

Portions are illegible in microfiche products.

Axiomatic quantum field theory requires support properties both in space-time and in momentum space. We introduce here some classes of test functions, which allow us to define supports in the usual way. These clases permit an extension to functions with fast decrease at infinity of the parallel treatment of test functions of Roumieu type and of Beurling type with compact support. We investigate here some elementary properties of these classes. Their intersection, which can be used as a universal test function space, is the space S_1^1.

19122 (INIS-SU—119, pp 11-20) To the lambda²/2 PHIsup(2)phisup(n) theory in the de Sitter space. Gadzhiev, S.A.; Petrosyan, V.A. 1981. (In Russian). NTIS (US Sales Only).

In Physics of atoms and elementary particles. Semantic collection of scientific papers.

The basis of the work is the hypothesis: relative 4-momenta in quantum field theory belong to the space of a constant curvature realized on a five-dimensional hyperboloid. A possibility for describing a polarization operator in the approximation of "iridiscent" diagrams in the P space of constant curvature is analyzed. The de Sitter group SO(2, 3) is the group of motions of this space. A mean multiplicity of the hadron production for the $e^+e^- \rightarrow$ hadrons process has been calculated.

19123 (JINR-D—2-81-543, pp 37-56) High energy processes in quantum chromodynamics. Efremov, A.V.; Radyushkin, A.V. 1981. (In Russian). NTIS (US Sales Only).

From 6. international conference on the problems of quantum field theory; Alushta, Crimea, USSR (5 May 1981).

Last works on investigation of perturbation structure of quantum chromodynamics (QCD) are reviewed. Main attention is paid to results which increase the rigidity of QCD predictions. Corrections according to coupling constant chemical bondsub(k) for C function, describing the interaction at small distances, are introduced. It is shown that Δ=Δsub(opt) that simplest 1sloop formula gives a very good approximation for chemical bondsub(s) (Δ-an additive counstant). Dependence of perturbation theory series on calculation scheme is demonstrated. In the scheme of minimum subtractions, based on dimensional renormalization, calculated are radiative corrections for the total annihilation cross section σΞsub(tot) ($e^+e^-\rightarrow$hadrons) and corrections for the paracharmonium decay width. Behaviour of magnetic form factor of Fsub(π)(Q) pion at not asymptotically large Q^2 ($q^2>$ or approximately 100 GeV^2) is considered as an example, illustrating the importance of investigation of both radiative and degree corrections.

19124 (MATSCIENCE—102) Lectures on the Lorentz group and related topics. Rao, K.S. (Institute of Mathematical Sciences, Madras (India)). Sep 1980. 166p. NTIS (US Sales Only), PC A08; 3. Order Number DE82904616.

Paper copy only, copy does not permit microfiche production.

These lectures include: homogeneous Lorentz groups; the homomorphism between SL (2,C) and L^+; finite dimensional representations; infinite dimensional representations; infinitessimal operators of the proper Lorentz group; general form of the infinitessimal operators for an I.R. of L^+; spinors and spinorial representations; spinors of higher ranks; unique spinor representations of the extended Lorentz group; two-valued spinor representations of the extended Lorentz group; and tensorial representations of the homogeneous Lorentz group. Related topics include: a relativistic formulation of SU(6) symmetry scheme; elementary fields and interactions; decomposition of elementary fields; field equations; Dirac-Fierz-Pauli equations; Kemmer equations; free field equations of motion for mesons; free field equations of motion for baryons; higher symmetry groups of elementary particles; and some aspects of SU(N) representations.

19125 (MATSCIENCE—103) Charmed physics of the seventies. Rao, K.S.; Parthasarathy, R. (eds.). (Institute of Mathematical Sciences, Madras (India)). Jan 1981. 191p. (CONF-7911187—). NTIS (US Sales Only), PC A09; 3. Order Number DE82904615.

From 35. Matscience conference on charmed physics of the seventies; Mysore, India (25 Nov 1979).

Paper copy only, copy does not permit microfiche production.

The talks given at the conference included: scaling hypothesis and phase transition; quantum anharmonic oscillator; SU(4) and a model of broken Zweig rule; gauge fields; a natural consequence of relativity; quark-lepton couplings in muon capture process; spontaneous breakdown of supersymmetry: a few astrophysical consequences; hadronic interactions of charged particles; some topics in charm and color; Einstein causality and localization of particles; radiative corrections to weak interactions gauge theories with integrally charged quarks; gluon effects in e^+e^- annihilation, and angular momentum coefficients and their numerical computation. (GHT)

19126 Families of generalized sine-Gordon fields. Kupershmidt, B.A. (Los Alamos Scientific Lab., NM (USA). Center for Nonlinear Studies). *Lettere al Nuovo Cimento;* **33**: No. 5, 137-139(30 Jan 1982).

When we have a field theory, it is important to know the properties of theories that lie nearby. For example, when the theory is integrable, i.e. has an infinite number of conserved densities, we may ask what kind of perturbations preserve the integrability of our theory. In particular, one can look for a (at least one-parameter) family of integrable systems which yields a given one when the parameter goes to zero. It is the purpose of this note to contruct such families for the generalized sine-Gordon (sG) equations introduced.

19127 Mass relations between quarks in grand unification. Frampton, P.H. (Harvard Univ., Cambridge, MA); Kang, K. *Hadronic Journal;* **3**: No. 2, 814-823(Feb 1980). Contract AC02-76CH00016.

It pointed out how unification of strong electromagnetic, and weak interactions can give rise to a significant contribution to the mass difference of up and down quarks.

19128 **Deformation of the Lie-admissible pseudo-octonion algebra into the octonion algebra.** Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* **1**: No. 5, 1383-1431(Dec 1978). Contract AC02-76ER13065.

Let an algebra P over the field F of characteristic not two be any Lie-admissible algebra, permitting a non-degenerate composition with symmetric bi-linear trace (or associative) form. Then, defining a new deformed product and a new symmetric bi-linear form in P, the deformed algebra P is shown to be alternative with the unit element. Moreover, it permits non-degenerate composition again now with respect to the new deformed product. Hence, by the Hurwitz theorem, only possible dimensions of the original algebra P are limited to 1,2,4, and 8. Further, the pseudo-octonion algebra P_8, the pseudo-quaternion algebra P_4, and the pseudo-quadratic algebra P_2 transform into the usual octonion, quaternion and quadratic algebra, respectively, by means of the deformation.

19129 **Octonion as traceless 3 x 3 matrices via a flexible Lie-admissible algebra.** Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* **1**: No. 5, 1432-1465(Dec 1978). Contract AC02-76ER13065.

We are investigating a new non-associative algebra which is a flexible and Lie-admissible algebra satisfying a cubic relation with a bi-linear symmetric associative form. We can show then that this algebra is pseudo-alternative and hence can be deformed into an alternative algebra with the unit element. As an application, we demonstrate that octonion algebra can be realized in terms of traceless 3 x 3 matrices over a field F which is not of characteristic two nor three.

6455 Scattering Theory

19130 **(DOE/ER/70004—288) Symmetry constraints in optimal polarization formalisms with an application to p-p scattering.** Goldstein, G.R.; Moravcsik, M.J. (Oregon Univ., Eugene (USA). Inst. of Theoretical Science; Tufts Univ., Medford, MA (USA). Dept. of Physics). 1 Nov 1981. Contract AT06-76ER70004. 67p. NTIS, PC A04; 3. Order Number DE82008306.

Paper copy only, copy does not permit microfiche production.

The paper contains results, (a) for the general optimal polarization formalism with constraints from time reversal invariance, identical particles, and parity conservation, (b) for the specific reaction involving four spin-1/2 particles, (c) for the application of the formalism to elastic p-p scattering at 6 GeV/c and at 800 MeV. The choice of the orientation axes under various symmetry constraints is discussed for the general optimal formalism, showing the narrowing of the choices which nevertheless retains an infinite continuum of possibilities. The transformation properties of amplitudes among these various optimal frames are specified. The transformation of observables among these frames is also discussed for the reaction with four spin-1/2 particles. Then the relationship between the observables and the bilinear combination of amplitudes is given for the reaction with four spin-1/2 particles, for the constraints of identical particles, identical particles and time reversal invariance, and identical particles and time reversal invariance and parity conservation. The results are applied to the analysis of the Argonne data at 6 GeV/c, $t = -0.6$ GeV^2/c^2, for elastic p-p scattering. The amplitudes are easily determined when the proper optimal frame is used, and the display of the amplitudes in other optimal frames suggest some features that may be significant in searching for dynamics. Another application is presented to 800 MeV elastic p-p scattering at several angles, showing that in the Proper optimal frame very accurate results can be obtained about a subset of amplitude parameters on the basis of an incomplete set of data. Such an analysis is shown to be helpful in the design of future experiments.

65 PHYSICS RESEARCH

6510 Nuclear Physics

19131 **(BNL-NCS—31292) Standardization of data for basic and applied nuclear physics.** Dunford, C.L.; Kinsey, R.R.; Tuli, J.K. (National Nuclear Data Center, Upton, NY (USA)). 1982. Contract AC02-76CH00016. 18p. (CONF-820624—2). NTIS, PC A02; 3. Order Number DE82016141.

From American Society for Information Science mid-year meeting; Knoxville, TN, USA (13 Jun 1982).

Paper copy only, copy does not permit microfiche production.

The need for standardized reference numerical data has long been recoginzed in both the basic and applied nuclear physics community. However, the needs of the two communities differ in many important aspects regarding the types of data which may be used to generate standardized data, the methods used to generate the data and the form and contents of the final results. The National Nuclear Data Center (NNDC) is the focal point of both national and international efforts to produce standardized reference data for low energy nuclear physics. This paper describes the production of standardized data for both basic and applied nuclear physics applications.

19132 **(CEA-N—2276) Progress report of the Nuclear Physics Department (1.10.1980-30.9.1981).** (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Apr 1982. 344p. (In French). NTIS (US Sales Only), PC A15/MF A01. Order Number DE83700276.

This progress report presents the experiments and the technological studies carried out at the Nuclear Physics Department of Saclay from October 1, 1980 to September 30, 1981. These studies concern the structure of nuclei and hypernuclei and various reaction mechanisms. They have been performed with the 8.5 MV tandem Van de Graaff, with the 600 MeV electron linac, at the synchrotron SATURNE and with different accelerators belonging to other laboratories.

19133 **(GSI—82-1) Scientific report 1981.** (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Mar 1982. 390p. NTIS (US Sales Only), PC A17/MF A01. Order Number DE83750168.

This annual report contains extended abstracts about the work done at the named Institute. These abstracts concern deep inelastic heavy ion reactions, nuclear reactions at high energy, nuclear structure, exotic nuclides, superheavy quasi-atoms and inner shell excitation mechanisms, few electron systems, interactions of heavy ions in matter, radiation effects in biological systems and solids, target and stripper technology, experimental set-ups, detectors, electronics, accelerators, and inertial confinement fusion.

19134 (IPNO—1981, pp N.1-N.130) **Nuclear physics division.** [nd]. (In French). NTIS (US Sales Only), PC A13/MF A01.

In Annual report 1981 (1 Sep 1980 - 31 Aug 1981).

This annual report describes the scientific research in Nuclear Physics Division from September 1980 to August 1981. The following subjects are studied: nuclear spectroscopy, high excitation energy nuclear states, reaction mechanisms with light ions, heavy-ion physics, intermediate energy physics, and perinuclear research. A list of publications and lectures is included.

19135 **(UCID—18987-82) Report to the DOE Nuclear Data Committee, 1982.** Haght, R.C.; Struble, G.L. (Lawrence Livermore National Lab., CA (USA)). Mar 1982. Contract W-7405-ENG-48. 17p. NTIS, PC A02/MF A01; 1. Order Number DE82008996.

Portions are illegible in microfiche products.

The report includes summaries of measurements and calculations of nuclear data applications, and use of nuclear data for reactor safety. (GHT)

6512 Nuclear Properties And Reactions, A=1-5

19136 (IAE—3420/2) Local NN interactions in a system of four nucleons and the method of hyperspherical harmonics. Fomin, B.A.; Ehfros, V.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 40p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700261.

40 refs.; 2 figs.; 10 tabs.

The technique of solution is described and the converging solution of the ^{4}He problem based on "local" realistic NN interactions is obtained. The hyperspherical harmonics method has been used. The Young operators simplified form is obtained. Hyperradial functions are considered. The approximation properties and convergence problems are studied. Properties of realistic NN interactions in the ^{4}He problem are discussed. The wave function properties are studied. The properties of "low energy" local central plus tensor potentials in the ^{4}He problem are systematically investigated. The linear dependence between the ^{4}He binding energy and D-wave weight in deuteron at fixed singlet forces is obtained. Sum rules for electron scattering on ^{4}He are calculated.

19137 (IPNO-TH—82-5) Use of realistic wave functions in the coherent photoproduction on ^{3}He nuclei. Ballot, J.L.; Lazard, C.; Maric, Z. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Jan 1982. 24p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700262.

We analyze the influence of the nuclear wave functions generated from a set of different realistic soft core two body potentials on the coherent charged pion photoproduction on ^{3}He nuclei at threshold and for small momentum transfers. This process is calculated in the framework of the impulse approximation including the Fermi-motion. At threshold and below the resonance, our results reproduce fairly well the experimental data. At the first γN resonance region, the agreement with experiments varies with the momentum transfer.

19138 (ITEP—12(1982)) Cross sections of low-energy anti pD interaction. Grach, I.; Shmatikov, M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700263.

17 refs.; 2 figs.; 3 tabs.

The total, annihilation, elastic and break-up cross sections of the anti pD interaction for the momenta of the colliding antiproton Psub(lab)< or approximately 150 MeV/c are calculated. The t-matrices describing anti NN interactions are introduced. The set of Faddeev equations for the anti pD interaction is solved. The missing-mass spectra for the anti pD annihilation are obtained.

19139 (ITF—81-95-R) Electrodisintegration of three-nucleon nuclei in the interpolation model. Malyarzh, E.M.; Tartakovskij, V.K.; Kozlovskij, I.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1981. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700266.

16 refs.; 4 figs.

Interpolation model is applied to calculate angular distributions and energy spectra of the products of ^{3}He two-particle electrodisintegration in the ^{3}He(e, e'p)d and ^{3}He(e, e'd)p reactions with detecting 1) electron- proton coincidences; 2) electron-deuteron coincidences; 3) deuteron only. Final state interactions are shown to be considerable in all cases under consideration.

19140 (ITF—81-111-R) Correlation effect in the NN-interaction and pd-scattering. Peresypkin, V.V.; Sajler, K.G.; Tartakovskij, V.K. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1981. 39p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700264.

27 refs.; 8 figs.; 10 tabs.

Relation between short-range NN correlations of the Jastrow type and the repulsive character of the interaction at short distances is studied. It is shown that in the energy range 600-1000 MeV the integral elastic NN- scattering cross-section is an important characteristic in finding the pd-scattering amplitude parameters.

19141 (KFK—3395) Experimental determination of the cross sections of the n-^{3}He-system in the energy range of 1 to 40 MeV. Haesner, B. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kern- und Teilchenphysik). Aug 1982. 83p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83750177.

Thesis. Submitted to Karlsruhe Univ. (TH) (Germany, F.R.). Fakultaet fuer Physik.

Cross sections have been measured in the n+^{3}He-system over a broad energy range. The experiments were conducted using the pulsed white neutron beam at the Karlsruhe Neutron Time of Flight Facility. The total cross sections were measured from 1-40 MeV using the 190 m flight path with 1.5 ns time resolution. This represents a substantial improvement over previous measurements. Angular distributions (THETAsub(c.m.) = 33°-179°) for the elastic n-^{3}He scattering were measured simultaneously in the energy range from 5 to 30 MeV. A liquid ^{3}He scintillation detector was used as the scatterer. The statistical errors are less than 2% for most (> 90%) of the data. Through the use of the L^{3}He detector absolute cross sections for the neutron induced reactions ^{3}He(n,p)T and ^{3}He(n,d)D could be measured from 1 to 30 MeV. These measurements are in good agreement with the results of the corresponding (p,n) and (d,n) reactions using detailed balance.

19142 (KFK—3396) Differential cross section measurement of the elastic neutron-deuteron-scattering in the energy range 2.5-30 MeV. Schwarz, K.P. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Aug 1982. 80p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83750174.

Dissertation submitted to Karlsruhe Univ. (TH) (Germany, F.R.).

The differential cross-section of the elastic D(n, n)D scattering has been measured in the energy range 2.5-30 MeV. A pulsed 'white' neutron beam from deuterons (Esub(d) approx. equal to 48 MeV) on natural uranium was collimated by bulk metal shielding in a approx. equal to 60 m long vacuum tube in the THETAsub(LAB) = O°-direction. The collimated neutrons were scattered from a partially and a totally deuterated scintillator. The mixed scatterer of hydrogen, deuterium and carbon provided the absolute calibration of the (n, d)-cross-section by the well-known (n, p)-cross-section. The scattered neutrons were detected by two detectors at 14 laboratory angles. Five parameters for each event were measured in coincidence, so that background reduction could be done. Additional contributions from multiple-scattering were determined by Monte-Carlo calculations. Twenty angular distributions were obtained with uncertainties between 2 and 6%. Some significant deviations from older measurements and from exact 3-body-calculations were found. Much importance was attached to the determination of the properties of the neutron-detectors, especially of the so-called 'black-detector'.

19143 (LBL—15284) Charge-exchange products of BEVALAC projectiles. Rasmussen, J. (Lawrence Berkeley Lab., CA (USA)). Nov 1982. Contract AC03-76SF00098. 17p. (CONF-821161—1). NTIS, PC A02/MF A01. Order Number DE83005862.

From High-energy physics with nuclear emulsion conference; Cairo, Egypt (22 Nov 1982).

There is a substantial production of fragments of all masses lighter than the projectile, such fragments being centered in a narrow region of velocity space around the beam velocity. The exciting studies about anomalons deal with the curious enhanced reactivity of some of these secondary fragments. I direct attention here to the rather rare fragments of the same mass number as the projectile but differing in charge by one unit. We also keep track, as a frame of reference, of the products that have lost one neutron from the projectile.

19144 (NEANDC(J)—88/U) Evaluation of neutron nuclear data for deuterium. Shibata, K.; Narita, T.; Igarasi, S. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Feb 1983. 51p. (INDC(JAP)—75/L; JAERI-M—83-006). Information Section, Division of Technical Information, Japan Atomic Energy Research Inst., Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan.

Evaluation of neutron nuclear data for ^{3}H has been performed in the neutron energy region from 10^{-5} eV to 20 MeV. The evaluated quantities are the total, elastic scattering, capture and (n,2n) reaction cross sections, the angular distribution for the elastic scattering and the double-differential cross section for the (n,2n) reaction. Theoretical calculations were done of the elastic angular distribution and the neutron spectrum from the (n,2n) reaction on the basis of the Faddeev equation. The present evaluated data are compiled in the ENDF/B format and to be stored in the second version of Japanese Evaluated Nuclear Data Library, JENDL-2.

19145 (CEA-CONF—6184) Angular correlations of α-particles from decay of ^{40}Ca following fusion of $^{28}Si + {}^{12}C$. Alamanos, N.; Le Metayer, C.; Levi, C.; Mittig, W.; Papineau, L. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Jan 1982. 25p. (CONF-820149—5). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700273.

From 20. international meeting on nuclear physics; Bormio, Italy (25 Jan 1982).

Angular correlations of α-particles from decay of ^{40}Ca following fusion of $^{28}Si + {}^{12}C$ were measured. The results for events leading to the ground state of ^{32}S were quantitatively analysed, using the statistical model. Angular correlations in appropriate experimental conditions permitted to verify angular momentum selection predictions for each of the steps involved. Whereas the mean behaviour is well reproduced, more detailed comparison shows significant disagreement. Strongly structured coincident energy spectra were observed. It is shown that these structures are not compatible with standard statistical level densities.

19146 (CEA-N—2260) Neutron and proton density distributions calculated by the Hartree-Fock-Bogolyubov method for spherical nuclei. Decharge, Jacques. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)). 1982. 160p. (In French). NTIS (US Sales Only), PC A08/MF A01. Order Number DE83700259.

A table of neutron and proton density distributions performed by the Hartree-Fock-Bogolyubov method using the D1 effective interaction is presented for spherical nuclei from oxygen up to the lead region. These calculations are constrained to the spherical symmetry. For the magic nuclei ^{40}Ca, ^{48}Ca, ^{90}Zr and ^{208}Pb, are also presented the Hartree-Fock density distributions taking into account long range correlation effects. These corrections have been carried out using the RPA approximation.

19147 (DOE/ER/10420—4) Fusion measurements in light- and medium-mass heavy-ion reactions. Progress report, June 1, 1982-May 31, 1983. Prosser, F.W. (Kansas Univ., Lawrence (USA)). Jan 1983. Contract AC02-79ER10420. 24p. NTIS, PC A02/MF A01. Order Number DE83007191.

The collaboration of Notre Dame with physicists there and at Michigan State on measurements of the entry lines in residues from the fusion of ^{16}O and ^{12}C has continued. Measurements of <M>, <E/sub γ/>, and <E/sub nu/> have been made and analysis of these are almost complete. Measurements of <E/sub α/> and <E/sub p/> have also been made and analysis is in progress. Additional measurements on the unusual properties of the $^{12}C(^{16}O,\alpha\ \gamma)\ ^{24}Mg$ reaction are planned. Preliminary reports on the first three sets of measurements have been made. Collaboration at Argonne using the ATLAS facility have continued. These have included fusion measurements with beams of ^{32}S and ^{64}Ni on Sn isotopes and some heavier targets. More recently, time-of-flight measurements of the fusion of ^{16}O and ^{28}Si beams with lighter targets, ^{12}C to ^{40}Ca, have been made to evaluate the importance of pre-equilibrium emission.

19148 (INIS-SU—104, pp 58-61) Compact analytical representation of the ENDF/B-V evaluated cross sections for the $^{6}Li(n,\alpha)$, $^{10}B(n,\alpha_0)$, $^{10}B(n,\alpha_1)$, $^{10}B(n,\alpha)$ reactions. Vinogradov, V.N.; Gaj, E.V.; Kononov, V.N.; Rabotnov, N.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Cross sections for the $^{6}Li(N, \alpha)$ and $^{10}B(n, \alpha)$ reactions widely used as standards in experimental investigations have been evaluated. To describe energy dependence of the $^{6}Li(n, \alpha)$ and $^{10}B(n, \alpha)$ reaction cross sections in the neutron energy range of up to Esub(n)=900 keV used is the Pade-2 approximation. The results obtained are tabulated. It is shown that the analytical approximation of nuclear cross sections on the base of the Pade approximation at Esub(n)=900 keV deacribes these cross sections with the accuracy above 0.5%.

19149 (INIS-SU—125, pp 390) Generalized optical potentials of light particle interaction with 1p shell nuclei. Gurbanovich, I.S.; Zelenskaya, N.S. 1982. (In Russian). NTIS (US Sales Only).

From 20. international meeting on nuclear physics; Bormio, Italy (25 Jan 1982).

The recent results obtained from elastic and inelastic scattering of 1.016 GeV ^{12}C projectiles are reviewed. A nuclear rainbow effect is reported for the $^{12}C + {}^{12}C$ system. Nuclear surface transparency effect is discussed. Prospects for higher energy measurements are outlined and their importance emphasized. Inelastic data analysis is reported for the 2^{+}, 4.4 MeV state of ^{12}C. Giant resonance excitation with intermediate energy heavy ions is discussed. Calculations (DWBA) are reported for GR cross-sections, opening interesting prospect for GR studies.

19153 (ITF—81-40-R) Invariant form of generating matrix elements of the problem of resonating group method examplified by the system ^{12}C + n. Filippov, G.F.; Avramenko, V.I. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1981. 19p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700265.

9 refs.

The problem of an invariant form of the generating matrix elements of the RGM(resonating group method) is investigated by considering the system ^{12}C + n. This paper deduces all the main formulas of an algebraic RCM version necessary for numerical calculations of the properties of the system ^{12}C + n. This system is qualitatively different from the previously discussed one, α + α, in

its multichanneiness, since from the very beginning one should take into account more complex structure of the nucleus ^{12}C than that of α-particles.

These (D. es Sc.).

A β recoil time of flight mass spectrometer and a tape transport system have been developed and connected to an He-jet system. The radioactivity is transported through two capillaries to these two systems which are operating simultaneous under the same time cycling conditions. On the T.O.F. mass spectrometer a thick plastic scintillator and a X-γ GeLi detector allow to measure coincidences between mass and Qsub(β) mass and γ, Esub(β) and γ. On the tape transport system coincidence measurements are recorded with additional detectors between γ-γ, γ-X and Esub(β)-γ. As a first step the investigated region of nuclei has been the Nb, Zr, Y, Sr neutron deficient isotopes. The goal was first to identify the isotopes and then to deduce mass excess values from total β^+ decay energy measurements. Level schemes have also been established in some cases. The method is presented and the results on the following isotopes (see table) are discussed. Table 1 presents the measured mass excess values.

19157 (INIS-SU—104, pp 242-244) **Taking account of finite geometry effects in epxerimental studies of the (n,n'γ) reactions.** Dushin, V.N.; Filatenkov, A.A. (Radievyj Inst., Leningrad (USSR)). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Values of gamma-quanta flux attenuation escaping from a specimen and spectra of neutron collision density have been calculated to determine influence of effects of finite specimen geometry when studying the (n, n'γ) reactions on ^{238}U amd ^{56}Fe nuclei. It is concluded on the base of results of the calculations performed that there is necessity to correctly take account of the effects of finite specimen geometry to obtain undistorted values of physical values.

22 refs.; 2 figs.; 2 tabs.

On the basis of the available data on parameters of neutron resonances average values of radiation widths (GITAsub(γ)) are calculated for a wide range of nuclei in the 50 upto 250 atomic weight range. Experimental values are compared with different variants of theoretical estimates of GITAsub(γ) which are reduced to the GITAsub(γ) dependence upon atomic weight A, excitation energy U and level density parameter a as GITAsub(γ)=CAsup(α)Usup(β)asup(γ). Besides, empirical values C, α, β, γ are selected satisfying the experimental data best of all. It is determined that the use of a=kA hypothesis leads to a sufficiently better agreement between all theoretical estimates of GITAsub(γ) and experimental values. It turned out that the estimations by Weisskopf, Bondarenko-Urin or with empirically chosen parameters give an approximately similar correspondence of calculated values GITAsub(γ)sup(p) to experimental data.

19162 (IPNO-DRE—82-07) Competition between a few nucleon emission and γ-deexcitation for the system $^{65}Cu + ^{87}Rb \rightarrow ^{152}Dy^*$ at E*approximately54 MeV. Cabot, C.; Gauvin, H.; Sergolle, H. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700280.

To explore the statistical or non-statistical character of the emission of a few neutron emission (1 or 2n) by nuclei formed at high angular momenta (approximately 40h) and high excitation energy (approximately 54 MeV), experiments have been performed on the ^{65}Cu(237 MeV) + $^{87}Rb \rightarrow ^{152}Dy^*$ system, to obtain information about the competition between γ and neutron deexcitation. This has been accomplished by determination of the γ entry-line position in the (E*,J) plane and by measurements of the total energy balance available in some of the xn emission processes. All the measurements (total gamma energy, multiplicity associated with each exit channel and neutron energy spectra) point out the statisti-

cal character of the few neutron emission which is related to the unexpectedly strong γ competition.

19163 (IPNO-DRE—82-08) Magic features of ^{68}Ni. Bernas, M.; Dessagne, P.; Langevin, M.; Payet, J.; Pougheon, F.; Roussel, P. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700281.

From measurements of the angular distribution around 0° for the ^{70}Zn(^{14}C,^{16}O) reactions, the first excited state of ^{68}Ni observed at 1.77+-.04 MeV is shown to be 0^+. This result establishes a new case of 2_1^+ and 0_2^+ inversion.

19164 (ISN—82-08) E3 transition connecting two high-spin states in ^{60}Ni. Tsan Ung Chan; Morand, C.; Azgui, G. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires). Feb 1982. 4p. (CONF-8206122—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700284.

From Europhysics study conference on nuclear structure; Crete, Greece (28 Jun 1982).

The ^{60}Ni levels scheme up to 10 MeV excitation is deduced from in beam γ spectroscopy in the ^{58}Ni(α,2pγ) reaction at Esub(α) = 32 MeV. An E3 transition connecting two high-spin states is found.

19165 (JINR—R-3-81-348) Study on the ^{77}Se(n,α)^{74}Ge and ^{145}Nd(N,α)^{142}Ce reactions on resonance neutrons. Antonov, A.; Gledenov, Yu.M.; Marinova, S.; Rigol, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1981. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700292.

7 refs.; 3 figs.; 2 tabs.

The first data on total α-widths for the ^{77}Se produced in the ^{77}Se(n, α)^{74}Ge reaction on resonance neutrons is obtained. For the first time α-widths for three resonances at 290, 864 and 1265 eV neutron energies have been measured. New α-widths have been measured and the calibration of ^{145}Nd has been made more precise. The average values of experimental α-widths (<GITAsub(α)>=7.8+-5.8 μeV for ^{77}Se and <GITAsub(α)>=0.32+-0.19 μeV for ^{145}Nd) for two isotopes agree satisfactorily with those calculated by the cluster model (GITAsub(α)=3.8+-0.8 μeV for ^{77}Se and GITAsub(α)=0.29+-0.03 μeV for ^{145}Nd). The measurements were performed on the LNP IBR-30 reactor operating as a buster with the electron linear accelerator. The neutron spectrometry was carried out by the time-of-flight method.

19166 (PNL-SA—10864) Early results from the Battelle-Carolina ^{76}Ge double-beta-decay project. Brodzinski, R.L.; Avignone, F.T.; Brown, D.P.; Evans, J.C.; Hensley, W.K.; Reeves, J.H.; Wogman, N.A. (South Carolina Univ., Columbia (USA). Dept. of Physics; Pacific Northwest Lab., Richland, WA (USA)). Oct 1982. Contract AC06-76RL01830. 9p. (CONF-820989—3). NTIS, PC A02/MF A01. Order Number DE83005290.

From Workshop on science underground; Los Alamos, NM, USA (27 Sep 1982).

A search for no-neutrino double beta decay of ^{76}Ge using an anticoincidence shielded Ge spectrometer is reported. A new lower limit of T/sub 1/2/ ≧ 1.7 x 10^{22} y at a 90% CL was determined using a maximum likelihood analysis on a 5 keV wide energy bin centered at 2041 keV. Combining this result with the shell model calculations of Haxton, Stephenson and Strottman, we obtain average m/sub nu/ ≦ 10 eV and parallel eta parallel ≦ 2.4 x 10^{-8}.

19167 (ANL/NDM—69) Fast-neutron scattering cross sections of elemental zirconium. Smith, A.B.; Guenther, P.T. (Argonne National Lab., IL (USA)). Dec 1982. Contract W-31-109-ENG-38. 23p. NTIS, PC A02/MF A01. Order Number DE83005800.

Differential neturon-elastic-scattering cross sections of elemental zirconium are measured from 1.5 to 4.0 MeV at intervals of ≦ 200 keV. Inelastic-neutron-scattering cross sections corresponding to the excitation of levels at observed energies of: 914 +- 25, 1476 +- 37, 1787 +- 23, 2101 +- 26, 2221 +- 17, 2363 +- 14, 2791 +- 15 and 3101 +- 25 keV are determined. The experimental results are interpreted in terms of the optical-statistical model and are compared with corresponding quantities given in ENDF/B-V.

19168 (ANL/NDM—78) Fast-neutron total and elastic-scattering cross sections of elemental indium. Smith, A.B.; Guenther, P.T.; Whalen, J.F. (Argonne National Lab., IL (USA)). Nov 1982. Contract W-31-109-ENG-38. 20p. NTIS, PC A02/MF A01. Order Number DE83005665.

Broad-resolution neutron total cross sections of elemental indium were measured from 0.8 to 4.5 MeV. Differential-elastic-scattering cross sections were measured from ≃ 1.5 to 3.8 MeV at intervals of ≃ 50 to 200 keV and at scattering angles in the range 20 to 160 degrees. The experimental results are interpreted in terms of the optical-statistical model and are compared with respective values given in ENDF/B-V.

19169 (FEI—1248) Study on the (p,n) reaction on the molybdenum isotopes. Trufanov, A.M.; Lovchikova, G.N.; Sal'nikov, O.A.; Simakov, S.P.; Bondarev, A.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1981. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700278.

16 refs.; 6 figs.; 4 tabs.

For the first time energy and angular neutron distributions from reactions ^{95}Mo(p, n)^{95}Tc and ^{98}Mo(p, n)^{98}Tc in the incident proton energy range of (6-9) MeV are obtained. The measurements have been realized by the time-of-flight method at the EGP-10 charge-exchange accelerator. The investigation of mechanism of these reactions is carried out. The form of neutron spectra and character of neutron angular distributions indicate that in the case of the ^{95}Mo odd isotope goes the compound- nucleus reaction takes place. The same sings show that in the case of ^{98}Mo the nonstatistic processes contribution at Esub(p)=9 MeV becomes noticeable. The difference in the reaction mechanism of these two isotopes may be explained either by even-odd effects or by the excess number of neutrons of one of them. The analysis of the obtained by the Hauser-Feshbach theory spectra with the purpose of determinin absolute density of ^{95}Tg and ^{98}Tc residual nuclei levels is presented. The values of nuclear level density parameters which enable calculating neutron spectra from these reactions for any energy in the investigated field are obtained. By form and absolute value equilibrium parts of neutron spectra of both technetium isotopes are close between themselves. Total cross sections of the (p, n) reaction obtained from calculated by Hauser-Feshbach spectra coincide with experimentally found within the limits (10-15)% when using for inlet channel parameters of the Becchetty-Greenles optic potential and for outlet channel-Averianov potential.

19170 (INIS-SU—104, pp 238-241) Analysis of background gamma lines observed in the experiments with 1-10 MeV neutrons. Morgunov, Eh.I.; Polyanskij, A.L.; Poyarkov, V.A.; StAizhak, V.I. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

The technique and results of the investigation of the gamma background radiation sources in the 600-3000 keV energy region from the neutron experiments are described. The collimated neutron Pu(Be) sources with 5x10^7 n/s intensity was used. Gamma-radiation were detected by Ge(Li) detector with 80 cm^3 sensitive volume and 6 keV energy resolution. The energies of the most intensive background gamma-lines are given.

19171 (INIS-SU—122, pp vp) Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{115}In and ^{181}Ta nuclei. Svirin, M.I. 1981. (In Russian). NTIS (US Sales Only).

In Nuclear constants.

Analysis of neutron emission spectra of the (p, n) and (n, n') reactions on ^{115}In, ^{181}Ta nuclei is done within the framework of the cascade evaporation model. A method for parametrization of experimental spectra of neutron emission from high-excited nuclei using exact expressions of the Weisskopf statistical theory with provision for the contribution of nonequilibrium effects is suggested. The contribution of the nonstatistical neutron emission is taken into account. The effect of γ-quanta competition on the probability of neutron yield in cascades is considered.

19172 (INIS-SU—125, pp 189) Role of structure effects in charged radii of odd nuclei. Krygin, G.B.; Dautov, L.M.; Kaipov, D.K.; Mitroshin, V.E. 1982. (In Russian). NTIS (US Sales Only).

From 32. conference on nuclear spectroscopy and nuclear structure; Kiev, Ukrainian SSR (16 Mar 1982).

19173 (JINR—R-3-81-721) Parameters of iodine and cesium neutron resonances in 20-250 eV range. Popov, A.B.; Trzeciak, K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1981. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700293.

7 refs.; 2 tabs.

Transmissions of samples of iodine and cesium under good resolution are measured by using the Neutron Physics Laboratory neutron spectrometer. Parameters of observed neutron resonances within the 25O eV region are determined by the form method. The radiative width values are obtained for 10 resonances of iodine and for 8 reconances of cesium. The average radiative widths are also obtained: <GITAsub(γ)>=120+-9 and 118+- MeV for iodine and cesium, respectively. Radius of potential scattering R'=5.5+-0.3 Fm for iodide and R'=4.2+-0.3 Fm for cesium has been evaluated by analyzing resonance shapes.

19174 (LUIP—8208) Light particle production in ^{12}C induced reactions at Cern SC Energies. Jakobsson, B. (Lund Univ. (Sweden). Fysiska Institutionen). Jun 1982. 28p. (LUNFD6/NFFK—7021/1-27(1982)). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700296.

The results from the first generation of experiments at the CERN synchrocyclotron with 30A MeV - 85A MeV ^{12}C beams are beginning to manifest the pattern of heavy ion reactions in the region between the binary low energy side and the 'chaotic' high energy side. Results from experiments on the production of p, d, and pi at these energies are presented.

19175 (NP—2903436) Alpha-decay half-lives of neutron-deficient trans-tin isotopes. Silisteanu, I.; Rizea, M. (Institutul Central de Fizica, Bucharest (Romania)). Nov 1980. 16p. (FT—198-1980). Dep. NTIS, PC A; 2. Order Number DE82903436.

Portions are illegible in microfiche products.

The α-activity of the new neutron deficient nuclei Te, I, Xe, Cs and Ba is studied by using the methods of the unified theory of nuclear reactions. A new one body width fomula is proposed for describing the α-decay as a special case of nuclear resonant reactions. The calculated α-decay data are compared with current experimental data and previous predictions for α - half-lives and branching ratios.

19178 (JINR—7-81-726) γ-multiplicity at fast α-particle emission in the ^{22}Ne + ^{181}Ta reaction. Kamanin, V.V.; Oganesyan, Yu.Ts.; Penionzhkevich, Yu.Eh.; Petrov, B F.; Rudiger, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1981. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700290.

14 refs.; 9 figs.

The dependence of γ-multiplicity on the energy of α-particles is measured in the ^{22}Ne+^{181}T reaction with the 165 MeV ion energy (lab.c.s.). A majority coincidence was used to obtain the α-spectra. The target was thick enough to stop the ion beam completely. At an angle of 0 deg to the beam axis a maximum energy of α-particles of 90 MeV is obtained. It is found that in this case the γ-multiplicity decreases with increasing the α- particle energy. A sample model describes this behaviour quite well.

19179 (JINR—R-6-82-8) Study on the ^{151}Gd → ^{151}Eu decay. Badalov, N.B.; Vylov, Ts.; Kasymov, K.; Kim Zaj Te; Li Su Chen; Omanov, Sh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1982. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700295.

25 refs.; 1 fig.; 5 tabs.

By means of semiconductor detectors and a coincidence spectrometer on the base of iron-free magnetic beta-spectrometer of "Organe" type and a Ge(Li)-detector spectra of gamma-rays, of internal conversion electrons and of esub(γ)-coincidences at the ^{151}Gd decay are studied. A monoisotopic ^{151}Gd spesimen is used. Three new transitions with 109.74; 195.18 and 284.72 keV energies have been discovered. For the first time with a high accuracy internal conversion coefficients have been measured for four electromagnetic transitions. On the basis of analysing an assembly of experimental data a scheme of ^{151}Gd → ^{151}Eu decay is constructed. A new level 216.66 keV is introduced, and previously introduced 260.5; 307.5; 349.8; 358.6 and 416.3 keV levels are confirmed. Physical analysis of obtained results is performed.

19180 (CEA-CONF—6154) Experimental evidence for giant multipole resonances at high excitation energies. Alamanos, N.; Arvieux, J.; Berthier, B. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Oct 1981. 21p. (CONF-8110234—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700270.

From Nuclear fission and related phenomena and properties of heavy nuclei conference; Bad-Honnef, F.R. Germany (26 Oct 1981).

Inelastic scattering of 480 MeV and 340 MeV α particles on ^{208}Pb, ^{116}Sn and ^{58}Ni has been used in a search for high excitation energy giant multipole resonance, until E* = 60 MeV for ^{208}Pb and E* = 45 MeV for ^{116}Sn and ^{58}Ni. Above the well known quadrupole and monopole resonances, there is clear evidence for a very wide set of negative parity modes (including the already known high energy octupole), followed and mixed with another very wide set of positive parity resonances, extending up to the limits of the experimental spectra.

19181 (DOE/ER/04935—064) Structure of nuclei far from beta stability. Progress report, May 15, 1982-May 14, 1983. Zganjar, E.F. (Louisiana State Univ., Baton Rouge (USA). Dept. of Physics and Astronomy). 1982. Contract AS05-76ER04935. 18p. NTIS, PC A02/MF A01. Order Number DE83006710.

Progress is briefly summarized for investigations at UNISOR/ORNL, GSI, and Brookhaven. Experimental and theoretical developments are reviewed, and a report list is included. (WHK)

19182 (DOE/ER/70035—5) Nuclear chemistry progress report, September 1, 1981-August 31, 1982. Loveland, W.D. (Oregon State Univ., Corvallis (USA)). Sep 1982. Contract AT06-76ER70035. 93p. NTIS, PC A05/MF A01; 1. Order Number DE83004913.

Portions are illegible in microfiche products.

Highlights are reported on research on intermediate energy (10 to 100 MeV/μ) and relativistic (250 MeV/μ) heavy ion reactions. Target fragmentation studies were emphasized. Publications and presentations are listed. (WHK)

19183 (AEEW-M—1914) Recommended decay data for 235-neptunium. Nichols, A.L. (UKAEA Atomic Energy Establishment, Winfrith). Nov 1981. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700257.

An evaluation has been made of the decay of ^{235}Np, a nuclide that has become popular for monitoring neptunium chemistry in the environment. Compared with other radioactive nuclides, ^{235}Np produces few emissions that are suitable for quantitative analysis. A semi-theoretical study was undertaken, and it is recommended that four K-shell X rays are used to monitor ^{235}Np.

19184 (CEA-CONF—6151) Evaluation of 238 Pu neutron cross-sections in the energy range 10^{-5} eV to 3 MeV. Derrien, H. (CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)). Oct 1981. 25p. (CONF-810957—7). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700268.

From Joint IAEA/NEA consultants meeting on uranium and plutonium resonance parameters; Vienna, Austria (28 Sep 1981).

This report describes the evaluation of the 238 Pu neutron cross-sections in the energy range from 10^{-5} eV to 3 MeV. The results of the evaluation are available in ENDF/B format.

19185 (CEA-CONF—6152) Review of 241 Pu resonance parameters. Derrien, H. (CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)). Oct 1981. 27p. (CONF-810957—8). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700269.

From Joint IAEA/NEA consultants meeting on uranium and plutonium resonance parameters; Vienna, Austria (28 Sep 1981).

The status of 241 Pu resonance parameters is reviewed. The most important recent results are compared in some energy ranges, both from single level and multilevel point of view. It appears that an accurate set of resonance parameters is not still obtained for a general description of the cross-sections in the resonance region. Some recommendations are given for further experiments or evaluations.

19186 (CEA-CONF—6172) Asymmetrically deformed states of ^{231}Th, ^{232}Th, ^{233}Th during the fission process. Blons, J. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Oct 1981. 7p. (CONF-8110234—2). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700272.

From Nuclear fission and related phenomena and properties of heavy nuclei conference; Bad-Honnef, F.R. Germany (26 Oct 1981).

The potential energy surface of a thorium nucleus as calculated by Moeller and Nix presents a shallow third minimum when introducing a mass asymmetric deformation for the nuclear shape. In such a shallow well, one can expect, only the first excited states above the ground state, for instance the rotational band states. Furthermore, this third minimum is split into two wells: one at positive and the other at negative octupole deformations.

19187 (CEA-CONF—6178) Application of the coupled-channel optical model to the calculation of fast neutron cross sections on odd-A actinide nuclei. Lagrange, C. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)). Nov 1981. 20p. (In French). (CONF-811161—4). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700258.

From Specialist meeting on fast neutron scattering on actinide nuclei; Paris, France (23 Nov 1981).

The application of the coupled-channel optical model to the calculations of reaction and direct interactions cross sections on actinide nuclei is presented. One of the most important reasons for paying particular attention to the optical model parameterisation is the obtention of a parameter set suited for extrapolation to neighbouring nuclei. The various methods used to determine a coherent set of parameters within the whole energy range 10 keV - 20 MeV are discussed. The parametrisation thus obtained for even-A nuclei can serve as a guide for the odd-A ones. The procedures used for calculating neutron cross sections for odd-A nuclei: ^{233}U, ^{235}U, ^{237}Np, ^{239}Pu, ^{241}Am are commented. A special consideration is given to the compound nucleus formation cross sections and the neutron penetrabilities in the energy range 10 keV - 5 MeV considered as very important for applied purposes.

19188 (INIS-SU—104, pp 47-53) Data estimated from the prompt neutron spectra of ^{233}U, ^{235}U, ^{239}Pu, ^{252}Cf fission. Starostov, B.I.; Semenov, A.F.; Nefedov, V.N. From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Estimates of shapes of prompt neutron integral spectra from ^{233}U, ^{235}U, ^{239}Pu thermal fission and 252 Cf spontaneous fission have been presented obtained from the results of measurements by differential methods.

19189 (INIS-SU—109, pp 13-19) Measurements of fission cross sections around 14 MeV. Varnagy, M.; Junasz, S.; Csikai, J. (Kossuth Lajos Tudomanyegyetem, Debrecen (Hungary). Kiserleti Fizikai Intezet). 1980. (In Russian). NTIS (US Sales Only).

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Fission cross sections for ^{235}U, ^{238}U and ^{237}Np were determined in the range 13.5-14.8 MeV neutron energy. Results prove the increase trends in the (n,f) excitation functions of these nuclei. Fragments were detected simultaneously by a fission chamber and track-etched foils.

19190 (INIS-SU—122, pp vp) Evaluation of the (n,2n), (n,3n) reaction cross sections on heavy nuclei with account for nonequilibrium processes. Bychkov, V.M.; Plyaskin, V.I.; Toshinskaya, Eh.F. 1981. (In Russian). NTIS (US Sales Only).

In Nuclear constants.

A method for evaluation of the (n, 2n), (n, 3n) excitation functions on heavy nuclei has been done in the initial neutron energy range up to the (n, 4n)-reaction threshold. Formulas are given for the absolute cross-sections calculation variants of the statistical and exciton models. The fission channel is described by the systematics of experimental values of neutron and fission widths GITAsub(n)/GITAsub(f). An evalution of the (n, 2n) and (n, 3n) reaction cross-sections has been done for 20 fissile isotopes. The results have been compared with other evaluations.

Portions are illegible in microfiche products. Thesis.

We have searched for back-decay gamma rays from the shape isomeric states in ^{235}U, ^{236}U, and ^{238}U possibly excited in muon radiationless transition. The energies and intensities of gamma rays following muon atomic capture were measured as a function of time after muon stopping. Background was suppressed by requiring that the candidate gamma ray be followed by another gamma ray (μ-capture gamma ray). The prompt gamma-ray spectra included the U-muonic x rays. The measured ^{235}U and ^{238}U x-ray energies were in good agreement with previously reported results. The x-ray spectrum from ^{236}U has not been previously reported. The ^{236}U spectrum is very similar to that of ^{238}U, except that the K x-rays exhibit an isotope shift of approximately 20 keV, the ^{236}U energies being higher. In the analysis of the delayed spectra of ^{236}U and ^{238}U using the GAMANL peak searching program, and with an effective lower-limit detection efficiency of .15% per stopping muon, no candidate gamma rays for the back decay transitions from the shape isomeric state were observed.

19195 (CNEN-RT/FI—(81)18) **Hartree-Fock problem for Skyrme interaction. Fundamental description for double magic nuclei.** Co, G.; Conci, C.; Marangoni, M.; Ottaviani, P.L.; Saruis, A.M. (Comitato Nazionale per l'Energia Nucleare, Bologna (Italy)). 1979. 173p. (In Italian). NTIS (US Sales Only), PC A08; 3. Order Number DE82903060.

Paper copy only, copy does not permit microfiche production.

The present paper is concerned with formulation and solution of the Hartree-Fock problem for doubly closed shell nuclei by referring to Skyrme's interactions. In the first part we expose the general formulation of the problem; in the second part, the problem is numerically solved in coordinate space by use of the Hartree program for IBM 360/75 computer. The input-output data and the flow chart of the program are given. In the third part is finally discussed the parameterization of the Skyrme interaction as a function of the nuclear matter and finite nuclei properties. The parameters of the interaction are then fixed by comparing with binding energies and radii of ^{16}O, ^{40}Ca, ^{48}Ca and ^{208}Pb nuclei.

Dept. of Mathematical Physics; Oak Ridge Associated Universities, Inc., TN (USA); Tennessee Univ., Knoxville (USA). Dept. of Physics). 1982. Contract W-7405-ENG-26. 24p. NTIS, PC A02; 3. Order Number DE83001935.

From International conference on nucleus-nucleus collisions; East Lansing, MI, USA (27 Sep 1982).

Paper copy only; copy does not permit microfiche production.

Some current directions are described. First, nuclear shapes are considered with focus on the γ degree of freedom and the unexplored high-spin regions of negative γ. Next, the role of approximate quantum numbers for very high-spin spectroscopy is examined, using as an example a calculation for ^{160}Er whcih is related to available quasicontinuum data. The trend from regular to chaotic behavior is discussed in the broader context of theoretical mechanics.

19197 (FEI—1230) **ROM-78 computer code: Calculation of cross-sections of elastic scattering of particles on nuclei in the framework of the optical model.** Titarenko, N.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1981. 21p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700260.

24 refs.; 5 tabs.

The algorithm and the computer code for calculation in the framework of the optical model of cross sections of elastic scattering of light and heavy particles (ions) on atomic nuclei are described. The computer code enables one in a broad kinematic variables range to calculate differential cross sections, polarization, asymmetry, rotation, tensor polarization reaction cross section, strength functions of elastic particle scattering on spherical nuclei. The version of correction experimental data on elastic scattering for isobar-analogous states with account for target isotope composition as well as automatic search of optical model parameters by experimental data is envisaged. The computer code is written in the FORTRAN-4 for the BESM-6 computer.

(Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.:. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Problem of calculation of neutron-atomic nucleus interaction cross sections in the resonance region by a method, which is more economical in terms of expenditures of calculational labour, is considered. To do this, suggested is the method of polynominal approximation of neutron cross sections resulting in the Jacobian polynomials. Polynomial coefficients are chosen on the base of condition of the least deviation of neutron cross section curve from the given values of the cross section. Polynomial power is optimized proceeding from permissible errors of cross section representation. The method suggested is realized in the form of a programm in the FORTRAN language for ES electronic computer.

19199 (INIS-SU—104, pp 54-57) **Neutron cross section calculations for neutron-rich nuclei.** Pozdnyakov, A.V. (Radievyj Inst., Leningrad (USSR)). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

The construction of the real part of the optical model potential (OMP) in the frames of OBER model is investigated. Special attention is given to the accurate discription of the isovector term of the OMP. The computer code for neutron cross sections in which the potential real part is constructed from the OBE potential has been done.

In Annual report 1981 (1 Sep 1980 - 31 Aug 1981).

For the period September 1980 - Aug 1981, the studies in theoretical physics divisions have been compiled under the following headings: in nuclear physics, nuclear structure, nuclear reactions and intermediate energies; in particle physics, NN and NantiN interactions, dual topological unitarization, quark model and quantum chromodynamics, classical and quantum field theories, non linear integrable equations and topological preons and Grand unified theories. A list of publications, lectures and meetings is included.

19203 **(ITF—81-97-R) Evolution of theoretical concepts concerning the structure of atomic nuclei after the discovery of a neutron.** Davydov, A.S.; Filippov, G.F. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1981. 53p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83700267.

43 refs.

The theoretical concepts concerning the structure of atomic nuclei after the discovery of a neutron which underlie theoretical treatment of experimental facts, such as the drop model, the shell model and the optical model, the generalized model and the phenomenological approach, a semi-microscopic theory and the theory of finite Fermi systems are presented. A good deal of attention is focussed on the microscopic theory of atomic nuclei collective excitations. The concluding part presents theoretical results on those sections of nuclear physics which have only recently come under the scope of research.

19204 **(LBL—15267) Anomalons, honey, and glue in nuclear collisions.** Gyulassy, M. (Lawrence Berkeley Lab., CA (USA)). Dec 1982. Contract AC03-76SF00098. 67p. (CONF-820899—2). NTIS, PC A04/MF A01. Order Number DE83005932.

From Summer school on nuclear dynamics; Victoria, BC, Canada (23 Aug 1982).

In these lectures, selected topics in nuclear collisions in the energy range 10^{-1} to 10^{3} GeV per nucleon are discussed. The evidence for anomalous projectile fragments with short mean free paths is presented. Theoretical speculations on novel topological nuclear excitation and on quark-nuclear complexes in connection with anomalons are discussed. Recent tests for pion field instabilities are presented. Then evidence for collective nuclear flow phenomena are reviewed. Global event analysis and cascade simulations are presented. We address the question of whether nuclear flow is like viscous honey. Finally, the criteria for the production of a quark-gluon plasma are discussed. Nuclear stopping power and longitudinal growth at high energies are considered. Results from cosmic ray data show that nuclear collision at TeV per nucleon energies are likely to product a plasma.

19205 **(AD-A—116999/4) Short-pulse electron-beam propagation experiments in a controlled-environment chamber. Final technical report 8 jun 81-8 mar 82.** Greenspan, M.A. (McDonnell Douglas Research Labs., St. Louis, MO (USA)). 8 Mar 1982. 35p. NTIS, PC A03/MF A01.

Propagation of a 500-keV, 6-kA, 3-ns electron beam in air has been studied in a 3.4 m diam controlled-environment chamber at pressures of 75-1600 Pa (0.56-12 Torr). Open-shutter photography, Faraday cup, and magnetic-field probe measurements were performed, and results were compared with those obtained for beam propagation in a 7.6 cm diam glass tube. Over a propagation window of 270-800 Pa, rectilinear propagation to within < or approx. 5 mrad was observed despite the lack of guide tube walls. Propagation at the low end of the window was limited by rapid nose-erosion rates of up to 10 cm/ns. At optimal propagation pressures (400-550 Pa), magnetic probe data were used to estimate induced electric fields and nose erosion caused by ohmic energy loss. Results were consistent with Faraday cup and calorimeter data. At higher pressures, propagation was erratic, and appeared to be terminated by the lack of a stable pinch formation. For those shots where propagation was observed at pressures above 550 Pa, Faraday cup traces show a loss of the beam tail.

19206 **(CEA-N—2271) Polarized tagged photons.** Maximon, L.C.; Ganz, E.; Aniel, T.; de Miniac, A. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1982. 125p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE83700275.

We consider in detail the differential cross section for polarized bremsstrahlung for angles and energies in the range of interest for a tagging system and derive a high energy, small angle approximation for this cross section. We use these approximations to determine the maxima and minima of the cross sections for these two polarization states, $d\sigma$perpendicular and $d\sigma$parallel, and to evaluate these cross sections at the extrema. It is shown that both $d\sigma$perpendicular and $d\sigma$parallel have a very sharp dip in the region of small momentum transfers. However, their behavior in the region of the dip, as a function of the azimuthal angle phi, is quite different over most of the photon spectrum. The cross section $d\sigma$perpendicular behaves similarly to the cross section for unpolarized photons in that as phi increases, the sharp dip vanishes, the minimum fuses with the second maximum, and the cross section then has only a single maximum. In contrast, the sharp dip in the cross section $d\sigma$parallel remains as phi increases. Coulomb corrections to the Born approximation are considered, and do not fill in these dips.

19207 **(CONF-820131—) Charge states and dynamic screening of swift ions in solids.** (Oak Ridge National Lab., TN (USA)). Jan 1983. Contract W-7405-ENG-26. 328p. NTIS, PC A15/MF A01; 1. Order Number DE83006799.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Portions are illegible in microfiche products.

Separate abstracts were prepared for 26 of 30 papers presented. Four papers were previously included in the data base. (WHK)

19208 (CONF-820131—, pp 1-12) **Stopping powers of Zr, Pd, Cd, In and Pb for 6.5 MeV protons and mean excitation energies.** Ishiwari, R.; Shiomi, N.; Sakamoto, N. (Nara Women's Univ., Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Stopping powers of Zr, Pd, Cd, In and Pb have been measured for 6.5 MeV protons. Mean excitation energies have been extracted from the stopping power data by taking into account Bloch correction and Z_1^3 correction. For the shell correction the Bonderup shell correction has been used. The results agree fairly well with those of other authors.

19209 (CONF-820131—, pp 13-22) **Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons.** Ishiwari, R.; Shiomi, N.; Sakamoto, N. (Nara Women's Univ., Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

It was found in our previous experiment, that when extremely sharply collimated protons pass through a thin target of random matter, the energy loes of protons measured with extremely high angular resolution increases by several percent as the emergence angle increases from zero to 1.78°. In the present experiment, this effect has been investigated systematically by changing the target thickness for Be, Al, Cu, Ag, and Ta.

19210 (CONF-820131—, pp 23-30) **Computer simulation of geometrical effects on the stopping power for 7 MeV protons.** Sakamoto, N.; Shiomi, N.; Ishiwari, R. (Nara Women's Univ., Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Computer simulation has been performed to investigate the origin of geometrical effects on the stopping power for 7 MeV protons. An individual collision which protons undergo within the target foil is found to be somewhat restricted by the determination of detecting angles. Therefore, if the energy loss of protons depends on the impact parameter, this restriction causes the emergence angle dependence of the energy loss. Using the energy loss formula of Kitagawa and Ohtsuki, which describes the impact parameter dependence of stopping power, and the screened Coulomb potential, we can reproduce both the angular distributions due to multiple scattering and the relative energy losses very well. The effects of the increase of the actual path length and the elastic energy transfer to recoil atoms are proved to be too small to explain experimental results.

19211 (CONF-820131—, pp 31-45) **Current stopping power analyses.** Porter, L.E. (Univ. of Montana, Missoula). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Modified Bethe-Bloch stopping power theory permits fairly accurate calculation of energy losses over a broad interval of projectile velocity $v = \beta c$ insofar as several parameters appearing in the revised Bethe-Bloch formula have been corectly evaluated. Since the parameters cannot in general be ascertained by calculation from first principles, fits of theory to measurement remain the best method of evaluation. The parameters alluded to are: the target mean excitation energy; the shell correction scaling parameters; the composite single free parameter of the Barkas (projectile-z^3) effect correction formalism, and the strength of the correction term; the high velocity density effect correction parameter; and the low velocity charge state parameter. These parameters are discussed. (WHK)

19212 (CONF-820131—, pp 46-56) **Stopping power of Ni, Ag, Au and Pb for ~ 7 MeV/n α-particles and carbon ions (Z_1^3 proportional deviation from the Bethe formula).** Doke, T. (Waseda Univ., Tokyo, Japan); Takahashi, T. Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

In the end of the 1960's, Andersen, Simonsen and Sorensen carried out the measurements of stopping powers of a number of elements for protons, deuterons and α-particles using the calorimetric-compensation technique and showed sone Z_1^3 proportional deviations from the Bethe formula. Recently, Andersen and his coworkers again made the measurements of stopping power of several elements for protons, α-particles and lithium ions in order to perform a more detailed investigation on the deviation from the Bethe formula. To ascertain the Z_1^3 deviation of stopping power for heavier ions, it is desirable to make precise experiments using projectiles more massive than lithium ions, which are almost completely ionized. Recently, we attempted to measure the stopping powers of several metals for ~ 7 MeV/n α-particles and carbon ions, although thus obtained data need a small correction for effective charge. Results are presented and discussed. (WHK)

19213 (CONF-820131—, pp 57-74) **Mean excitation energies for use in Bethe's stopping-power formula.** Berger, M.J.; Seltzer, S.M. (National Bureau of Standards, Washington, DC). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

A review has been made of the mean excitation energies that can be derived from the analysis of stopping-power and range measurements, and from semi-empirical dipole oscillator-strength distributions for gases and dielectric-response functions for solids. On the basis of this review, mean excitation energies have been selected for 43 elemental substances and 54 compounds. Additivity rules have also been considered which allow one to estimate the mean excitation energies for compounds for which no direct data are available. These additivity rules are based on the use of mean excitation energies for atomic constituents which, to a certain extent, take into account the effects of chemical binding and physical aggregation.

19214 (CONF-820131—, pp 75-77) **Inner-shell ionization and stopping power.** Komaki, K. (Univ. of Tokyo, Japan). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

For better understanding of various aspects in stopping phenomena such as Z_1^3-dependence, shell correction, geometrical effect, direction dependence etc., it seems to be helpful to examine theoretically and experimentally the elementary processes which include plasmon excitation, single electron excitation and inner-shell excitation/ionization. In the present, impact-parameter dependent stopping power is discussed in connection with inner-shell ionization.

19215 (CONF-820131—, pp 88-100) **Empirical stopping powers for ions in solids.** Ziegler, J.F.; Biersack, J.P.; Littmark, U. (IBM, Yorktown, NY). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

The work of Brandt and collaborators on low energy ion stopping powers has been extended to create an empirical formulation for the stopping of ions in solids. The result is a simple computer program (about 60 lines of code) which calculates stopping powers from zero to 100 MeV/amu for all ions in all elemental solids. This code has been compared to the data in about 2000 papers, and has a standard error of 9% for energies above keV/amu. This approach includes high energy relativistic effects and shell-corrections. In the medium energy range it uses stopping theory based on the local-density approximation and Lindhard stopping in a free electron gas. This is applied to realistic Hartree-Fock charge distributions for crystalline solids. In the low energy range it uses the Brandt concepts of ion stripping relative to the Fermi velocity of solids, and also his formalism for the relation of projectile ionization to its effective charge. The details of the calculation are presented, and a broad comparison is shown with experiment. Special comparative examples are shown of both the low energy stopping power oscillations which depend on the atomic number of the ion, and also of the target.

19216 (CONF-820131—, pp 101-107) **Stopping power of rare gases in amorphous silicon for MeV helium ions.** Fujimoto, F. (Univ. of Tokyo, Japan); Komaki, K.; Ootuka, A.; Kawatsura, K.; Ozawa, K.; Shimada, T.; Katayama, Y. Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

The stopping cross sections of argon, krypton and xenon inside amorphous silicon for α-particle, in which the concentrations of argon, krypton and xenon were 8, 7, and 4 at. %, respectively, were measured by the RBS method in the incident energy range from 1.0 to 2.6 MeV for argon and 1.0 to 1.6 MeV for krypton and xenon. If we use the stopping cross section of silicon given by Ziegler and assume Bragg's rule, the obtained values of each rare gas were about 30% lower than those for gaseous state given by Ziegler in the energy region near to 1 MeV.

19217 (CONF-820131—, pp 108-114) **Stopping power of an electron gas for slow ions.** Ritchie, R.H. (Oak Ridge National Lab. TN). Jan 1983. NTIS, PC A15/MF A01; 1. Contract W-7405-ENG-26.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

The electron gas model has been exploited extensively in solid-state physics and in radiation physics. Semi-empirical formulas that involve the effective-charge concept have been used widely in recent years to describe the stopping power of matter for swift ions with atomic number appreciably greater than unity. The complexity of energy loss processes in this regime makes it important to study limiting cases in which accurate results may be obtained. Various calculation methods used recently are reviewed. (WHK)

19218 (CONF-820131—, pp 115-130) **Ion-channelling effects in scanning ion microscopy with a Ga^+ probe.** Levi-Setti, R. (Univ. of Chicago, IL). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

The scanning ion microscope (SIM) can be applied to the study of several aspects of the ion-solid interaction in conditions which are seldom accessible to conventional accelerator experiments. Its ability to image the target material and the practicality of directing the ion beam to intercept preselected microscopic areas of the target make it possible to probe local interaction properties in a comparative manner. The recent development of liquid metal ion sources has made it feasible to follow this approach using intense, finely focused beams of heavy ions. Such beams can be used as scanning probes for imaging purposes, as milling devices (direct ion beam writing) in electronic microfabrication, and for microanalysis by secondary ion mass spectrometry. Imaging of bulk specimens in the SIM takes advantage of the contrast arising from several ion-solid interaction processes such as secondary electron (SE) and secondary ion (SI) emission, the latter related to sputtering of the target material. These processes are strongly affected by ion-channeling penetration phenomena in crystalline materials. This report describes preliminary observation of such phenomena carried out with a 60 keV Ga^+ SIM, which provides a focused probe $\sim$ 100 nm wide.

19219 (CONF-820131—, pp 131-135) **Anomalies in the thickness dependence of the energy loss of helium and nitrogen ions in very thin carbon foils.** Biersack, J.P.; Mertens, P. (Hahn-Meitner-Inst., Berlin, Germany). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Energy losses of 300 and 610 keV He^+ and of 300 keV N^+ ions were measured in transmission experiments using carbon foils of 100 to 700 A thickness. The energy losses were determined either by a magnetic spectrometer calibrated by proton resonance or by an electrostatic analyzer. The targets were kept at 4 10^{-8} torr during beam exposures of less than 20 nC. The good vacuum and low ion dose helped to keep the targets unaffected during repeated measurements.

19220 (CONF-820131—, pp 136-148) **Energy loss of heavy ions as a function of target thickness: Ne → C.** Lennard, W.N.; Andrews, H.R.; Mitchell, I.V.; Phillips, D.; Ward, D. (Atomic Energy of Canada Ltd. Research Co., Chalk River, Ontario). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

We report on extensive measurements to determine the target thickness dependence of heavy ion energy loss (dE/dx) for the Ne → C system. For ions transmitted with zero net deflection at velocities $0.75 \leqq v/v_0 \leqq 1.05$, a significant dependence of dE/dx on foil thickness has been observed which, parametrized through the Meyer-Klein-Wedell theory, identifies an inelastic component in the energy loss for scattered particles. A discussion is given of some of the precautions that have proved necessary in applying time-of-flight techniques to these energy loss measurements.

19221 (CONF-820131—, pp 149-154) **Estimation of fluctuation in restricted energy loss.** Doke, T. (Waseda Univ., Tokyo, Japan); Hayashi, T.; Nagata, K. Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Restricted Energy Loss (REL) is defined as an energy loss [(dE/dX)/sub E//sub $\delta/<\omega/$] that produced the δ-rays of energies less than some specified energy ω and is often used as a simple measure of track structure. For example, REL is a measure of track formation threshold in plastic track detector and the growth rate of track in chemical etching solution is considered to depend only on REL given along the track. Using a stack of elastic sheets, recently, it became possible to identify isotopes of incident particles. In that case, the limit of mass resolution is determined by fluctuation of REL in the length of etch pit produced along the path of particle. A computer program was developed to calculate the probability distribution for energy deposition in absorber allowing for electron escape. In this calculation, it is assumed that all electrons with energies greater than a certain value ϵ/sub d/ escape. This means that this calculation directly gives the fluctuation of REL. Therefore, we tried to use the computer program to estimate the ultimate mass resolution in plastic detector. In this paper, we show firstly the comparison of ASB's calculation with the experimental results obtained by a gas counter and next the results of estimation of ultimate mass resolution in plastic detectors.

19222 (CONF-820131—, pp 167-174) **Stopping of swift ions in condensed matter: the theory of effective charge.** Basbas, G. (Physical Review Letters, Ridge, NY). Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

The stopping power of a dielectric medium for a swift ion is calculated for a prescribed electronic structure on the projectile. The electronic charge carried by the projectile in traversing the medium is dictated by a stripping criteria. From the resulting stopping power an effective charge may be inferred. This charge successfully predicts the energy loss for a variety of ions and targets encountered in the laboratory.

19223 (CONF-820131—, pp 175-187) **Effective charge of energetic ions in metals.** Kitagawa, M. (North Shore College, Atsugi, Japan); Brandt, W. Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

The effective charge of energetic ion, as derived from stopping power of metals, is calculated by use of a dielectronic-response function method. The electronic distribution in the ion is described through the variational principle in a statistical approximation. The dependences of effective charge on the ion velocity, atomic number and r/sub s/-value of metal are derived at the low-velocity region. The effective charge becomes larger than the real charge of ion due to the close collisions. We obtain the quasi-universal equation of the fractional effective electron number of ion as a function of the ratio between the ionic size and the minimum distance approach. The comparsion between theoretical and experimental results of the effective charge is performed for the cases of N ion into Au, C and Al. We also discuss the equipartition rule of partially ionized ion at the high-velocity region.

19224 (CONF-820131—, pp 188-196) **Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold.** Schulz, F. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H, Neuherberg, Germany); Brandt, W. Jan 1983. NTIS, PC A15/MF A01; 1.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

Stopping powers S of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold have been measured in order to deduce effective charge fractions zeta = Z_1^{-1} (S/S/sub p/)/sup 1/2/, where z_1 is the atomic number of the swift ion. The proton stopping powers S/sub p/ have been taken from literature date. The experimental effective charge fractions are compared with the results of a new theory by Brandt and Kitagawa which involves

the calculation of the stopping powers S/sub Q/ and S/sub Z_1/ for an ion of charge Q and the respective bare nucleus. It is found that the zeta/sub exp/-values are in much better agreement with zeta/sub th/ than with the calculated mean degree of ionization of the swift ion in the target. However, the theory cannot fully account for all details of the experimental data. In particular, the observed Z_1-dependence of zeta/sub exp/ is more pronounced than predicted.

19225 (CONF-820131—, pp 313-314) **Charged particle track structure in insulators.** Ritchie, R.H. (Oak Ridge National Lab., TN); Claussen, C. Jan 1983. NTIS, PC A/MF A01; 1. Contract W-7405-ENG-26.

From Conference on charge states and dynamic screening of swift ions; Honolulu, HI, USA (25 Jan 1982).

A new model for describing charged-particle track formation in insulators is briefly mentioned. The model hypothesizes that the ejected electrons return quickly to form a core electron-ion plasma fed by energy from excited states that should exist in high concentration near the core region. (WHK)

19226 **(FEI—1039) MMK 22p code for calculating the neutron flux by the Monte-Carlo method in the subgroup approximation.** Korobejnikov, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1981. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700254.

9 refs.; 2 figs.; 5 tabs.

Possibility and basic characteristics of the MMK 22p computer codes meant for carrying out neutron calculations with account for resonance self-shielding. The MMK 22P computer code realizes the solution of the integral subgroup equation by the Monte Carlo method. General theory of the problem solution and computer code flow chart are presented. The instruction for preparing the job for calculations is given. As a constant system the OLNT 26-group neutron cross section library of the ARAMAKO-2F system is employed. The MMK 22p computer code is developed on the basis of the Frank-Kamenetsky MMK-22 subcode library for calculating reactors by the Monte Carlo method in the group approximation. The described computer code provides the possibility of calculating the rates of capture and fission reactions at any resonance isotope.

19227 **(FEI—1188) GRUKON software package. Part 1. Data processing code.** Sinitsa, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1981. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700255.

3 refs.

The GRUKON software package of applied computer codes is intended for obtaining group microscopic constants from estimated neutron data. General data on the GRUKON: software package structure, data classification, principles to define the job are given. The detailed description of the rules for the definition of the first part of the job "desampling code". Contemporary package state allows one to calculate average group cross sections from different representations of the library of estimated data ENDF/B: tables, resonance parameters and parameters of their statistic distributions. The package is used on the BESM-6 computer. The main programming language is the FORTRAN-BESM.

19228 (INIS-SU—104, pp 15-19) **Total neutron cross section distribution density.** Glukhovets, A.N.; Filippov, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.:. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Results of restoring a smooth shape of density of total iron neutron cross section distribution, which was performed using transmission functions measured for energy intervals $\Delta E=35$ keV in the energy range $E<0.4$ MeV and for intervals $\Delta E=200$ keV at higher energies are given. Compared were values of self-screening factors of total neutron cross section calculated from momenta of restored distributions and corrected values of the BNAB constants system Restoration of neutron cross section distribution density shape has been performed on the basis of solution by the method of the least directed divergence of integral equation for the transmission function. Complexity of the distribution shape obtained for low energies is attributed to that fact, that as the density is inversely proportional to the energy derivative of cross section in the region of local extremum of the cross section or its constancy the density is to have maximum, which value is determined with a width of the region under consideration. For high energies the contributions of many external points to the density shape are statistically mixed and the distribution approaches arbitrary distribution.

19229 (INIS-SU—104, pp 25-29) **Program complex for preparing of neutron constants on the base of evaluated data for Monte-Carlo calculations.** Kolesov, V.E.; Solov'ev, N.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.:. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Technique for preparing neutron constants to calculate reactors and reactor shielding by the Monte-Carlo method based on using existing libraries of evaluated nuclear data is described. According to energy structure neutron cross sections are tabulated with definition of interpolation law in the form of approximating polynomials and by means of the collected data distribution function. Program packet for preparing neutron constants by the Monte Carlo method has been developed on the basis of the technique suggested. The programs are written in the FORTRAN language for the ES electronic computer.

19230 (INIS-SU—104, pp 124-129) **Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons.** Kovalev, V.P.; Isaev, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.:. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

An expression for calculation of photoneutron yield from targets irradiated with electrons has been derived. The expression for calculating photoneutron yield represents a single integral. It was suggested during the formula derivation that electron loses energy continuously and the whole bremsstrahlung is directed forward and cross section is inversely proportional to photon energy. An expression for calculating track length has been obtained as well. Results of the track length calculation for tantalum and tungsten using the formula and the Monte Carlo method are presented. Good agreement of the results for thickness$>0.5R_0$ (where R_0 - mean electron path) is observed. Comparison of calculated photoneutron yields and experimental data also showed their good agreement. It the range of 10-40 MeV electron energies for photoneutron yield derived was a formula including giant resonance parameters. Results of calculations of photoneutron yield using the formula and the Monte-Carlo method are practically coincided for electron energies of 10, 15, 20 MeV in the thickness range of 0.5-12 g/cm^2.

19231 (INIS-SU—104, pp 144-148) **Two-layer targets for the D-D reaction.** Dekhtyar, M.I.; Primenko, G.I.; Strizhak, V.I. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Neutron concentration and neutron output from two-layer loading target during deuteron beam braking in first layer of target is studied theoretically. Straggling effect on neutron output is discussed.

19232 (INIS-SU—104, pp 149-153) **Polarization filter of thermal neutrons on the base of SmCosub(3.3) alloy.** Zhuchenko, N.K.; Tarovik, Eh.G.; Trunov, V.A.; Ul'yanov, V.A.; Yagud, R.Z. (AN SSSR, Leningrad. Inst. Yadernoj Fiziki:. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Polarization of thermal neutrons is received in the transmission through the target of composition SmCosub(3.3). Polarizing characteristics of alloy are measured.

19233 (INIS-SU—104, pp 154-157) **Development in LIYaF of the method of polarized thermal neutron beam production by mirror reflection.** Borovikova, N.V.; Bulkin, A.P.; Gukasov, A.G. (AN SSSR, Leningrad. Inst. Yadernoj Fiziki: (and others). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Main stages of development of polarizing neutron guide equipment in LIYaF of the USSR Academy of Sciences are described. To carry out experiments on solid-state physics constructed was a working mock-up of a polarizing neutron guide having 1570 mm length of a mirror channel. Successful application of polarizing mirrors to the working mock-up permitted to develop and fabricate five-meter polarizing neutron guide with output flux equal to $1.5x10^7$ neutr/cm^{2}xs. The following stage of development of polarizing neutron guides was the construction of four-meter neutron guide at the WWR-M reactor with output flux equal to the highest possible. Improvement of optical sections geometry made it possible to produce integral flux of $6.0x10^7$ neutr/cm^{2}xs in this neutron guide at 15 MW reactor power. The results obtained testify to prospects of the mirror method for polarization of thermal neutrons of a wave length lambda >= A. Neutron guides-polarizators permit to produce high fluxes of polarized thermal neutrons in the wide interval of wave length.

19234 (INIS-SU—104, pp 158-164) **Characteristics of mirror neutron guides made of the "float" type glass.** Kornilov, V.V.; Nazarov, V.M.; Sysoev, V.P.; Shamchuk, V.P. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

The requirements for the glass surface of the mirror neutron guides are discussed. The quality of the glass surface of the "float" type was determined experimentally by measuring the coefficient of total reflection and the indicatrix of neutron scattering after reflection. A test of the neutron guides from that glass was performed on IBR-30 beams. Neutron spectra and transmission coefficients obtained are given.

19235 (INIS-SU—122, pp vp) **Derivation of the generalized frequency spectra of moderator atom oscillation from experimental double differential scattering cross section of slow neutrons.** Lisichkin, Yu.V.; Novikov, A.G.; Semenov, V.A.; Tikhonova, S.I. 1981. (In Russian). NTIS (US Sales Only).

In Nuclear constants.

The procedure of the derivation of the generalized frequency spectra for incoherently scattering moderator atoms realized in the SPECTR program written in the FORTRAN-4 lanquage for the BEMS computer is described. The problem of the derivation is solved by iterative method by taking into account effects of elastic (quasielastic), multiphonon and multiple scattering. The results of data processing using the SPECTR program are given both for "paper" and real experiment for zirconium hydrides and light water. It is shown that with increasing iteration number the model spectra given initially is approached to truth one.

19236 (INIS-SU—124, pp 18-22) **Kerma-factor in neutron interaction with ^{7}Li.** Bondarenko, I.M. 1981. (In Russian). NTIS (US Sales Only), PC A04/MF A01.

15 refs.; 3 figs.

In Nuclear constants.

Heat generation by neutron interactions in ^{7}Li is calculated in the paper. Kerma-factor is calculated for neutron energies between 0.1 and 20 MeV. The ENDF/B-4 data and recent experimental results are used for the calculation of kerma-factor. Plot of this kerma-factor is presented in units of eVxb/atom as a function of neutron energy.

19237 (INIS-SU—125, pp 547) **Transition effects in the transmission of up to 20 keV electrons through laminated structures.** Akkerman, A.F.; Gibrekhterman, A.L.; Dvurechenskij, A.V. 1982. (In Russian). NTIS (US Sales Only).

From 32. conference on nuclear spectroscopy and nuclear structure; Kiev, Ukrainian SSR (16 Mar 1982).

19238 (JAERI-M—9791) **EXPANDA-General user's guide.** Hasegawa, A. (Japan Atomic Energy Research Inst., Tokyo). Nov 1981. 79p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE83700175.

Generalized EXPANDA; EXPANDA-General: A one-dimensional diffusion criticality and perturbation code has been developed based on the code EXPANDA-70DRA. The new code has following characteristics; (1) Variable dimensioned coding is adopted. Hence this code is completely free from dimensional restrictions encountered at the fixed dimensioned code. There are no limitations for number of energy groups, regions, mesh points. (2) Acceptable all of the libraries; JAERI-Fast set, JENDL-1 and 2 set, ENDF/B IV set. (3) Possibility of exact perturbation calculation as well as first order perturbation. (4) Semi-automatic preparation of input data for two or three dimensional criticality calculation codes; CITATION or EXTERMINATOR-2. (5) Semi automatic preparation of input data for two or three dimensional perturbation calculation codes; CIPER or PERKY. (6) More accurate treatment for elastic removal effective cross sections for light and medium weight nuclides in the resonance region using exact weighting fluxes solved by recurrence formulae numerically. (7) Proper treatment for gross region heterogeneity due to the large material change at the interface of regions. (8) More efficient and easy treatment for the comparison of C/E (calculated to experimental) values of typical integral data obtained by the benchmark test in order to assess the applicability of the group cross section libraries. (9) Adoption of self-explanation systems in the group cross section library: General-Library, i.e. all of the informations to define the library are contained in that library itself. Therefore any structured library such as any group number and any independent parameters of self-shielding factor tables is accessed by this new code.

19239 (KFKI—1982-35) **Small angle neutron scattering study of metallic alloys by a double crystal device.** Cser, L.; Kovacs, I.; Kroo, N.; Zsigmond, Gy. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Jun 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700256.

6 refs.

A double crystal small angle neutron scattering (SANS) device was built and a simple method for measuring the integrated SANS intensity was developed. The device and the method were tested and the possibility of future applications was demonstrated by measurements on different samples. The test measurements were performed on iron and teflon slabs of different thickness. On Fe-B metallic glasses a SANS intensity originating mainly from the multiple magnetic refraction at domain boundaries was observed. A very weak SANS intensity was found on turbine blades. The integrated SANS intensity was shown to correlate with the running time of the blades. Similar measurements were performed on artificially deformed steel samples.

19240 (PB—82-252800) **Depolarisation effects in resonance absorption neutron polarising filters.** Mayers, J. (Science and Engineering Research Council, Chilton (UK). Rutherford Appleton Lab.). [nd]. 29p. NTIS, PC A03/MF A01.

The depolarization of a neutron beam passing through a system of magnetically misaligned single domain particles is examined and simulated using a Monte-Carlo program. The results of the simulations are in excellent agreement with those of analytic calculations within the regimes where such calculations are applicable. The simulations have been used in the estimation of the polarizing efficiency and transmittance of a resonance absorption filter containing partially aligned particles of SmCo5. It is shown that the application of strong magnetic fields (about 2T) should significantly improve the filter performance. A method of measuring this improvement is suggested.

19241 **(SAND—82-1820) Transition radiation: a possible diagnostic tool for relativistic electrons at Sandia.** Sanford, T.W.L.; Beezhold, W.; Lee, J.R. (Sandia National Labs., Albuquerque, NM (USA)). Dec 1982. Contract AC04-76DP00789. 26p. NTIS, PC A03/MF A01. Order Number DE83006844.

The properties of transition radiation are briefly discussed in order to explore the possibilities of using this type of radiation as an intense source of x rays or as a diagnostic tool on high-energy electron accelerators. It is concluded that owing to the low intensity of the radiation per transition surface, transition radiation offers little possibility as an intense source of x rays. However, because the intensity grows linearly with γ, transition is useful as a diagnostic tool in association with high-energy accelerators.

19242 **Extending the definition of optical depth to coherent pulse propagation.** Shore, B.W. (Lawrence Livermore Lab., CA). *Optics Communications;* **37**: No. 2, 92-96(15 Apr 1981). Contract W-7405-ENG-48.

I extend the notion of optical depth, as conventionally defined for Beer's law attenuation of weak long-duration intensity, to the description of coherent propagation of 2π pulses, by considering the asymptotic two-parameter pulse which evolves over long distances from an initial pulse of arbitrary shape. Whereas in Beer's law propagation pulse intensity falls by 1/e in one optical depth, a coherent 2π pulse is delayed by a fraction of its pulse width in one optical depth.

19243 **(DOE/EV/03522—T3) Biological and clinical dosimetry. Progress report, October 1, 1981-August 31, 1982.** Laughlin, J.S. (Sloan-Kettering Inst. for Cancer Research, New York (USA). Radiation Biophysics Lab.). 31 Aug 1982. Contract AC02-76EV03522. 20p. (COO—3522-26-T3). NTIS, PC A02/MF A01. Order Number DE82021626.

Non-isolated-sensor calorimeters constructed from polystyrene and tissue-equivalent A-150 plastic have been tested. The addition of thermocouples in close proximity to the thermistors resulted in a negligible error in determining the factor (C/sub P//α), required for calculation of absolute dose, due to uncertainty of the temperature in the vicinity of the thermistor. Comparison of absorbed dose measurements made in the same position in the same Co-60 field with non-isolated sensor calorimeters constructed from A-150 plastic and polystyrene, and assuming the thermal defect of polystyrene is negligibly small, permitted the determination of the thermal defect (TDF) for A-150. Construction of a non-isolated-sensor solid water equivalent calorimeter is under way. We are able to mold the thermal sensors directly into this material at accurately determined positions, thus eliminating problems of thermal contact between sensors and material. Neutron fluxes and dose rates in and near the 18 MV x-ray beam of a Therac-20 accelerator were determined with measured activities from nuclear reactions $^{31}P(n,p)\ ^{31}Si$ (fast neutrons) and $^{31}P(n,\gamma)^{32}Si$ (thermal neutrons), published cross sections, and neutron energy spectra from Monte Carlo calculations. Orthophosphoric acid solution was identified as a suitable and convenient phosphorus dosimeter material. The phantom study showed that at 18 MV internally produced neutrons have a negligible effect on the neutron field within the patient.

19244 **(PB—82-248170) Precision gamma- and x-ray energies. Final report.** Deslattes, R.D.; Kessler, E.G. Jr. (National Bureau of Standards, Washington, DC (USA)). 1980. 16p. Pub. in Proceedings of Conference Atomic Masses and Fundamental Constants 6 (1980), Ann Arbor, MI, September 18-20, 1979, p203-218 1980.

At this time, it has been possible to redetermine a small but significant group of gamma-ray reference energies (0.6 less than E less than 1.1 MeV) in terms of the Rydberg constant, R (infinity). This work has made use of an I2 molecularly stabilized laser to link Doppler-free spectroscopy of hydrogen with achromatic procedures for crystal spacing determination. Crystals calibrated in this way (after suitable transfer measurements) have been used to determine X-ray and gamma-ray transition energies using flat-crystal instruments whose angular scales were established to high accuracy from first principles. The authors main aim is to summarize applications thus far, and to examine the technical problems and potential interest which may follow from extension of these techniques to higher energies.

19245 **(PB—83-921000) FDA compliance program guidance manual (FY 83). section VI. radiological health. updates. Irregular repts.** (Food and Drug Administration, Rockville, MD (USA)). 1982. 1p. Paper copy available on Standing Order, Deposit Account required. North American Continent price $50.00/year; all others write for quote. Single copies also available in paper copy only. Basic report available as PB83-921099.

The standing order allows one to obtain updates to Section VI of the Compliance Program Guidance Manual which provides plans and instructions to Field operations which are surveillance and/or compliance oriented and provide needed direction from Headquarters Offices and Bureaus in accomplishing FDA's regulatory obligations for those products monitored for radiation. This section also includes the concept to the Manual and miscellaneous material relating to compliance functions.

19246 **(PB—83-921099) FDA compliance program guidance manual (FY 83). section VI. radiological health.** (Food and Drug Administration, Rockville, MD (USA)). Oct 1982. 476p. NTIS PC $20.00.

The FDA Compliance Program Guidance Manual provides a system for issuing and filing written program plans and instructions directed to Food and Drug Administration field operations for project implementation.

19247 **(PNL-SA—10874) Track modeling by Monte Carlo techniques.** Wilson, W.E. (Pacific Northwest Lab., Richland, WA (USA)). Nov 1982. Contract AC06-76RL01830. 6p. (CONF-820998—2). NTIS, PC A02/MF A01; 1. Order Number DE83005560.

From Workshop on the interface between radiation physics and radiation chemistry; Chicago, IL, USA (9 Sep 1982).

Portions are illegible in microfiche products.

Several efforts in modeling charged particle tracks by Monte Carlo techniques are surveyed, some of their similarities pointed out and some of the limitations of the technique discussed. (ACR)

19248 **Microdosimetry and neutron dosimetry.** Burger, G.; Jacobi, W. (Gesellschaft fuer Strahlen- und Umweltforschung mbH, Muenchen, Germany). pp 29-35 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The long term programme of the Laboratory for Radiation Physics and Microdosimetry is summarized. Three main topics include: experimental studies of electron and ion transport, especially of the ion track structure in matter and measurement of global dosimetric parameters, such as W-values; theoretical studies on the same subjects by development, improvement and application of radiation transport codes; and the application of the physical information on the primary radiation effects on biological model targets.

19249 **Theoretical and experimental study on the ionizing energy loss modes of charged particles in matter. Consequences for microdosimetry, radiobiology and nuclear medicine.** Rechenmann, R.V. (Univ. Strasbourg, France). pp 37-45 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Theoretical and experimental studies were performed on the ionizing energy loss modes of charged particles in matter. In the contract period considered (1976 to 1980), the results of track analytical studies of the Laboratory, which had been reported previously, e.g. the presence of relatively energetic secondary electrons, even in the lower energy region of an α particle crossing complex media, as well as the relatively high occurrence of energetic recoil nuclei/ions, have been confirmed experimentally. In the same line of thoughts, various theoretical approaches, classical or quantum mechanical, have been undertaken in order to interprete experimen-

tal cross-sections determined in the Laboratory or derived from the literature. As a logical consequence of these investigations, a study on the range-energy relation of medium energy heavy charged particles in tissue-like media has been undertaken in connection with the evaluation of the contribution of the electronic and nuclear stopping powers to the energy loss of these particles in biological tissues. (RJC)

19250 **Underlying parameters in dosimetry.** Dennis, J.A. (National Radiological Protection Board, Harwell, England). pp 59-71 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

Neutron cross-section data on hydrogen, carbon, nitrogen and oxygen up to 50 MeV energies have been determined. The mass stopping powers of ethylene and polytehylene for alpha particles were measured. The W values of tissue equivalent gas and its constituents nitrogen, methane and carbon dioxide using alpha particles i the range 1 to 4 MeV were also determined. Studies on solid state physics processes underlying the properties of some materials used in thermoluminescence and lyomuminescence dosimetry were performed. (RJC).

19251 **Dose distribution at interface.** Reich, H. (Physikalisch-Technische Bundesanstalt, Braunschweig, Germany). pp 119-123 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This project was undertaken to determine the ion dose distribution in the vicinity of an interface between two media of different atomic number irradiated by a photon or electron beam travelling normal to the interface. The local variation of dose is limited to the region of electron non-equilibrium which exists on either side of the interface. The thickness of the transition region is of the order of the maximum range of the secondary electrons. (RJC)

19252 **Fundamental dosimetric studies with slow heavy charged particles.** Watt, D.E. (Dundee Univ., England). pp 125-141 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of three projects. The objectives of the first project are: (1) to provide stopping cross-section data for light ions at energies near and below the Bragg peak in materials of dosimetric interest; and (2) to explore possible differences in the stopping power of a medium attributable to (a) its physical state (phase effect) and/or (b) the chemical bonding (i.e. resulting in deviations from Bragg additivity). The second project is a determination of ionization cross sections and W values in gases for heavy ions. In the third project cross sections for inactivation of ribonuclease by low energy heavy charged particles were measured. (RJC)

19253 **Collection and evaluation of neutron dosimetry data (CENDOS).** Bewley, D.K.; Broerse, J.J.; Burger, G.; Coppola, M.; Gibson, J.A.B.; Parmentier, N.; Pohlit, W.; Portal, G. (Radiobiological Inst. TNO, Rijswijk, Netherlands). pp 153-156 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

General agreement on a unique set of paremeters will be one of the essential requirements to assure consistency within neutron dosimetry results obtained at different institutes. At the initiative of the Commission of the European Communities a committee had been set up which would be involved with the collection and evaluation of neutron dosimetry data (CENDOS). The specific task of this committee was to review the current status of the field, to compare new results and to encourage and direct new experiments. The scope of these activities was to provide essential information for radiation protection dosimetry and associated radiobiological studies aimed at risk estimates. The activities of the CENDOS committee during the past contract period are reported. (RJC)

19254 **Production of recommendations on quantities units, measurements and physical data for clinical radiology, radiobiology, and radiation protection.** Wyckoff, H.O. (International Commission on Radiation Units and Measurements, Washington, DC). pp 157-160 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The activities of the International Commission on Radiation Units and Measurements (ICRU) during the contract year are reported. Included is a list of published reports from 1976 to 1980. Areas in which the revision of previous recommendations or the formulation of new recommendations which would constitute a significant contribution to radiation measurement are identified. (RJC)

19255 **Neutron dosimetry in radiation protection.** Burger, G.; Jacobi, W. (Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg, Germany). pp 165-169 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publisher (1981).

The long term programs of the Laboratory for Neutron Measurement and Technology in the group covers three main topics: (1) the development and application of installations, instrumentation and methods to provide standard neutron fields and detectors for performing calibrations, reference measurements and intercomparison studies; (2) the development and improvement of applied techniques for neutron dosimetry and spectrometry; and (3) the performance of radiation transport calculations. All these activities were items of the proposal and hence supported to different extents by the contract. With respect to the new international dosimetric concepts, that have been introduced, the laboratory concentrated mainly, in the past two years, on the third project. Several numerical methods were applied to calculate the organ doses in inhomogeneous phantoms as well as the index quantities for the ICRU-sphere.

19256 **Development of a rationalized approach to the measurement of external beta and gamma radiation for radiation protection purposes.** White, D.F. (National Radiological Protection Board, Harwell, England). pp 193-196 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publisher (1981).

The objective to establish experimentally the relationships between the free-air radiation quantities hitherto used in standards laboratories and radiation protection instruments, and the dose equivalent and dose equivalent index quantities defined in ICRU Report 25 and ICRP Publication 26.

19257 **Radiation spectrometry and microdosimetric studies.** Peirson, D.H. (UKAEA, Atomic Energy Research Establishment, Harwell, England). pp 563-581 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

This program consists of five projects. Project titles are: measurement of neutron absorbed dose with ionization chambers; neutron and LET spectrometry in a man-phantom; the mutagenic and lethal effects of neutrons and gamma rays on mammalian cells; microdosemetric models for the interpretation of mutation and cell killing in mammalian cells; and track parameters of ionizing radiation. (RJC)

19258 **Spectral and physical factors in x-ray diagnosis.** Drexler, G. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H., Neuherberg, Germany). pp 1209-1213 of Radiation protection. Progress report 1980. New York, NY; Harwood Academic Publishers (1981).

The following tasks were performed for this program: improvement of facilities and methods for the determination of the spectral distribution of radiation emitted by x-ray tubes; determination of patient dose in mammography and dentistry using tissue-equivalent phantom materials; and calculation of organ doses in the human body resulting from x-ray examinations. (RJC)

19259 (DOE/ER/10427—T1) Adsorption on metal surfaces. Progress report, May 1, 1980-April 30, 1983. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). Jan 1983. Contract AS05-79ER10427. 39p. NTIS, PC A03/MF A01. Order Number DE83006245.

Adsorbed surface layers constitute a distinct phase of matter with important consequences in virtually all areas of technology. Detailed information on the statis properties of adsorbed layers has been provided by such techniques as low energy electron diffraction, photoemission, and core level spectroscopies. A common limitation in such studies, however, is that interactions involving relatively small energies are often mased by other, much larger, characteristic energies. This is, of course, a familiar problem in bulk solid state physics, where many of the important properties of materials are controlled by their defect structure, which is characterized by much weaker interaction energies than those responsible for the periodic character of the lattice. We have therefore undertaken a joint theoretical-experimental program that is directed toward the consequences of these relatively weak surface interactions in adsorbed layers on metal surfaces. Although they involve comparatively small energies, these interactions have a profound influence on surface reactivity.

19260 (LBL—15472) Photo-excited states in germanium at liquid-helium temperatures. Culbertson, J.C. (Lawrence Berkeley Lab., CA (USA)). Dec 1982. Contract AC03-76SF00098. 202p. NTIS, PC A10/MF A01. Order Number DE83006188.

Portions are illegible in microfiche products. Thesis.

A wide variety of experimental work dealing with the basic properties of photoexcited states in Ge at liquid helium temperatures is presented. The primary emphasis is on the electron-hole liquid (EHL) and the free exciton (FE). The EHL is composed of two interpenetrating Fermi liquids, one of electrons and one of holes, each with its own Fermi level. The FE dealt with here is a mobile, loosely bound state of an electron and a hole. We report the first absolute measurement of the density dependence of the enhancement factor g/sub eh/(0) for the EHL in Ge. This factor g/sub eh/(0) is a measure of the electron-hole spatial correlation function, and provides a valuable and sensitive test for the predictions of various many-body-theory approximations. An EHL droplet - FE gas system confined to a strain induced potential well was used. The measurement approach relied on only a few simple and verifiable assumptions. A byproduct of this work was the measurement as a function of stress of: the electron and hole Fermi levels E/sub F//sup e/ and E/sub F//sup h/, the EHL density n/sub l/, the condensation energy phi of a FE relative to the EHL, and the binding energy of a FE (E/sub x/) relative to free carriers (FC). The decay of a FE-FC system confined to a strain induced potential well is studied. The first direct measurement of the FE diffusivity D/sub x/ is reported. The evolution in time of spatial profiles of FE luminescence were measured. From these FE density profiles, D/sub x/(4.2K) approx. = to 300 $cm^2 s^{-1}$, the surface recombination velocity S approx. = 3000 cm s^{-1}, and the FE lifetime tau/sub x/ = 27 μs with surface effects excluded were determined. 19261 (AD-A—119784/7) Molecular-orbital basis for superconductivity in high- and low-dimensional metals. Interim technical report. Johnson, K.H.; Messmer, R.P. (Massachusetts Inst. of Tech., Cambridge (USA). Center for Materials Science and Engineering). 24 Sep 1982. 102p. NTIS, PC A06/MF A01.

A real-space molecular-orbital description of electronic wave functions which are postulated to be the precursors of the superconducting state in high- and low-dimensional metals is presented, based on self-consistent X-alpha scattered-wave (SCF-X alpha-SW) molecular-orbital calculations for clusters representing the local molecular environments in these materials. It is shown that there is a persistent correlation between the occurrence of superconductivity in a material and the existence of spatially delocalized molecular orbitals at the Fermi energy which are bonding within and antibonding between 'layers' or 'tubes' of overlapping atomic orbitals that span many atoms, forming a type of 'electron network' at the Fermi energy, as exemplified by P pi 'layered' molecular-orbital topologies in Al and (TMTSF)2PF6, and by d sigma 'tabular' molecular-orbital topologies in Nb and Nb3Sn. This description of the precursor superconducting state is consistent with the original conjectures of London that the superconducting-state wave function is 'molecular' in nature, 'rigid' in character, and of wide spatial extent, from which observed physical properties (e.g., diamagnetism and nondissipative electrical currents) of the superconducting state logically follow.

19262 (ANL/MCS-TM—3) Eigenvalue problem for Hermitian matrices with time-reversal symmetry. Dongarra, J.J.; Gabriel, J.R.; Wilkinson, J.H. (Argonne National Lab., IL (USA)). Oct 1982. Contract W-31-109-ENG-38. 19p. NTIS, PC A02/MF A01. Order Number DE83005629.

This paper describes a computational method for dealing with a class of matrices which arise in quantum mechanics involving time reversal and inversion symmetry. The algorithms presented here have greatly reduced the computational effort required to solve this problem and also produce a stable, more accurate solution.

19263 (DOE/ER/70004—291) Polarization structure and the weave of 16-sets. Moravcsik, M.J. (Oregon Univ., Eugene (USA). Inst. of Theoretical Science). Aug 1981. Contract AT06-76ER70004. 9p. NTIS, PC A02/MF A01; 1. Order Number DE82008329.

Portions are illegible in microfiche products.

It is shown how in the polarization structure of a four-particle reaction containing particles with arbitrary spins the 16-sets of the reaction 1/2 + 1/2 + 1/2 + 1/2 are interwoven in a way which allows the essential properties of that structure to be determined by the properties of the 16-sets. This result was instituted in earlier papers but was not analyzed or proven previously.

19264 (INIS-SU—119, pp 107-120) Complete sets of functions on one-void hyperboloid. Agamaliev, A.K. 1981. (In Russian). NTIS (US Sales Only).

In Physics of atoms and elementary particles. Semantic collection of scientific papers.

The existence of the proper functions of the Casimir operators realized on the functions of arbitrary tensor dimensionality, given at one-cavity hyperboloid, is proved. Corresponding solutions of the Casimir operators are found. Recursion relations for the basic functions beyond the light cone are found and solved. The basic functions of irreducible unitary representations corresponding to the spectrum of proper values $l_0>1$ and $0<=\nu<$infinity are constructed. It is concluded that the solutions corresponding to the spectra of the proper values $\nu=0$ l_0 l at the integral values of l and l' momenta are expressed by the linear combinations of the Legendre joined functions, and at $\nu=0$ (also at $l_0=0$) the l and l' momenta can not have half-integral values.

19265 (UCRL—87201-Rev.1) Three-dimensional computer modeling of electromagnetic fields: a global-lookback lattice-truncation scheme. Ziolkowski, R.W.; Madsen, N.K.; Carpenter, R.C. (Lawrence Livermore National Lab., CA (USA)). Oct 1982. Contract W-7405-ENG-48. 73p. (CONF-820511—2-Rev.1). NTIS, PC A04/MF A01; 1. Order Number DE83006583.

From IEEE Antennas and Propagation Society national radio science meeting; Albuquerque, NM, USA (24 May 1982).

Portions are illegible in microfiche products.

A new lattice-truncation scheme for the finite-difference time-domain approach to the solution of Maxwell's equations has

been developed. The problem space is truncated near the sources and the field components on its boundary are generated from those field values known at retarded times on an interior surface one call from it with an integral representation of the electromagnetic field. The numerical implementation of this global-lookback scheme is discussed. Examples which have been used to determine its characteristics and its validity are given.

19266 **Nonautonomous form of the theory of Lax equations.** Kupershmidt, B.A. (Los Alamos National Lab., NM (USA). Center for Nonlinear Studies). *Lettere al Nuovo Cimento;* **33**: No. 4, 103-107(23 Jan 1982).

The author considers the KdV equation in the framework of the theory of Lax equations.

19267 **Remarks on the problematic aspects of Heisenberg/Lie/symplectic formulations.** Santilli, R.M. (Harvard Univ., Cambridge, MA). *Hadronic Journal;* **3**: No. 2, 854-914(Feb 1980).

A number of problematic aspects of conventional quantum mechanical formulations have been recently focused. A few rudimentary remarks are presented in the hope of contributing toward a more adequate identification of the open problems, as a prerequisite for their future resolution.

19268 **Direct and inverse variational characterization of linear nonconservative systems.** Bahar, L.Y.; Kwatny, H.G.; Massimo, F.M. (Drexel Univ., Philadelphia, PA). *Hadronic Journal;* **1**: No. 3, 976-1011(Aug 1978).

Equations of motion are derived from quadratic Lagrangians for single and multiple degrees of freedom systems through the use of Lagrange's equations as well as Hamilton's principle. It is shown that such equations of motion are formally self-adjoint (FSA). The inverse problem of constructing the Lagrangian explicitly, starting from the Newtonian equations of motion with variable coefficients is considered for the case of scalar and vector equations. Finally, the structure of dissipative and gyroscopic systems is examined, and it is shown that such systems are pre-formally self-adjoint (PFSA) and can be converted to a FSA system upon multiplication of their equations of motion by a suitable factor matrix. Specific examples are considered and Lagrangians are constructed for dissipative and gyroscopic systems. The possibility of extending the structure beyond systems considered in this paper is investigated.

19269 **Possible Lie-admissible covering of the Galilei relativity in Newtonian mechanics for nonconservative and Galilei form-noninvariant systems.** Santill, R.M. (Harvard Univ., Cambridge, MA). *Hadronic Journal;* **1**: No. 1, 223-423(Apr 1978).

In order to study the problem of the relativity laws of nonconservative and galilei form-noninvariant systems, two complementary methodological frameworks are presented. The first belongs to the so-called Inverse Problem of Classical Mechanics and consists of the conventional analytic, algebraic and geometrical formulations which underlie the integrability conditions for the existence of a Lagrangian or, independently, of a Hamiltonian. These methods emerge as possessing considerable effectiveness in the identification of the mechanism of Galilei relativity breaking in Newtonian Mechanics by forces not derivable from a potential. For this reason, the second methodological framework is presented. It belongs to the so-called Lie-Admissible Problem in Classical Mechanics and consists of the covering analytic, algebraic and geometrical formulations which are needed for the equations originally conceived by Lagrange and Hamilton. These formulations are characterized by the Lie-admissible algebras which are known to be genuine algebraic covering of Lie algebras, and which in this paper are identified as possessing (a) a direct applicability in Newtonian Mechanics for the case of forces not derivatble from a potential, (b) an analytic origin fully parallel to that of Lie algebras, i.e., via the brackets of the time evolution law, (c) a covering of the conventional canonical formulations as classical realizations, (d) an implementation at a number of levels of Lie's theory, including a fundamental realization as enveloping nonassociative algebras, (e) a generalization of symplectic and contact geometry as geometrical backing and (f) the capability of recovering conventional formulations identically at the limit of null external forces, here interpreted as relativity breaking forces. A covering of the Galilei relativity, called Galilei-admissible relativity, is then conjectured for independent scrutiny.

19270 **(MATSCIENCE—104) Proceedings of the second conference on number theory.** Jagannathan, R. (Institute of Mathematical Sciences, Madras (India)). Jun 1981. 160p. (CONF-8008161—). Dep. NTIS, PC A; 2. Order Number DE82904614.

From 2. conference on number thoery; Ootacamund, India (3 Aug 1980).

Microfiche only, copy does not permit paper copy reproduction.

The conference includes papers on: irrationality estimates using Legendre polynomials; harmonic sums of certain subsets of nonnegative integers; summary of some results in the analytic theory of numbers; certain sums involving the maximal K-free division function; on abstract Mobius inversion; maximal K-th power and the maximal K-th power unitary division of an integer; integers as sums of two relatively prime composite integers; partitions with congruence conditions and color restrictions; use of matrix methods in certain number theoretic problems; diaphantine equations and partition functions; and Brouwer's fixed point theorem. (GHT)

19271 **(NP—2902557) Half-forms.** Rawnsley, J.H. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique; Warwick Univ., Coventry (UK)). Sep 1980. 9p. NTIS (US Sales Only), PC A02; 3. Order Number DE82902557.

Paper copy only, copy does not permit microfiche production.

The main purpose of the paper is to describe the theory of half-forms and their pairing from the line bundle point of view rather than using metaplectic structures as is usual.

19272 **(NP—2902729) Some properties of Borel summable functions.** Auberson, G.; Mennessier, G. (Montpellier-2 Univ., 34 (France). Dept. de Physique Mathematique). 1980. 31p. Dep. NTIS (US Sales Only), MF A01; 2. Order Number DE82902729.

Microfiche only, copy does not permit paper copy reproduction.

Classes of Borel summable functions are defined and studied. Some properties of these functions, which are useful for high-order calculations pertaining to certain physical theories, are proved and discussed. They include reciprocal Watson-like theorems, sufficient conditions for membership in the classes, and asymptotic behaviours of the expansion coefficients after composition of functions.

19273 **(PM—80/5) Water waves produced by ground motions.** Sabatier, P.C. (Montpellier-2 Univ., 34 (France). Dept. de Physique Mathematique). Jun 1980. 60p. NTIS (US Sales Only), PC A04/MF A01; 1. Order Number DE82902560.

Portions are illegible in microfiche products.

One looks for mathematical models that are sufficiently simple to be solvable and that represent the formation of water waves near a sloping beach by ground motions offshore, in a linear and irrotationnal approximation. A survey of the constant depth case first gives a way to understand the mechanism of formation, and in this oversimplified case, wave propagation away from this usually very dissymetric source. Importance of this dissymetry, which may result in producing trapped waves, is illustrated by an estimate of the propagation in a three-dimensional case. The formation of waves by a ground motion on a slope is then studied in detail. It is shown that the linear model is an improperly posed problem. This results in the fact that no exact and stable response to a δ-function source be constructed . Using a technique borrowed from studies of improperly posed problems, one constructs a couple source-response in which the source is δ-like and the response is almost that which would hold if the depth was constant around the

source. A general approximate solution is then derived from the previous one. It enables one to determine the important physical parameters in the ground motion and to evaluate the rate of efficiency. Finally, several remarks on non linearity and on possible extensions of the present work are suggested.

19274 **(PM—80/6) Large-order expansion for the anharmonic oscillators.** Figerou, V.R. (Montpellier-2 Univ., 34 (France). Dept. de Physique Mathematique). 1980. 50p. NTIS (US Sales Only), PC A03/MF A01; 1. Order Number DE82902561.

Portions are illegible in microfiche products.

Using functional approaches, we investigate the large-K behavior of the K/sup th/ coefficient E/sub K/ in the perturbation expansion for the goundstate energy E(g) of the generalized anharmonic oscillator X/sup 2N/ with internal 0(n)-symmetry. We establish the equivalence between the pure functional approach and the method of Collins-Soper at any order in 1/K. for that purpose, we first develop an algebraic treatment of perturbation series and prove a theorem on Borel-summable functions. Finally, we compute analytically the 1/K and $1/K^2$ corrections to the leading term for N = 2.

19275 **Generalization of Hurwitz theorem and flexible Lie-admissible algebras.** Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* 3: No. 1, 1-52(Dec 1979). (CONF-7908175—).

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

Any algebra P satisfying the composition law (xy, xy) = (x, x) (y, y) and the invariance condition (xy, z) = (x,yz) has been completely classified when the underlying field F is algebraically closed and of characteristic not equal to 2, and not equal to 3. The dimension of the algebra is limited to 1, 2, 4, and 8. It is shown that the usual Hurwitz theorem can be derivable from this classification as a special case. Also, various classifications and constructions of flexible Lie-admissible algebras are discussed. The importance of quasi-classical Lie algebras for general classification of simple flexible Lie-admissible algebras has been emphasized and utilized. Several products which behave covariantly under quasi-equivalent transformation have been discussed. Also, a notion of super-flexible law has been introduced with some results.

19276 **Lie-admissible structure of statistical mechanics.** Fronteau, J. (Univ. of Orleans, France); Tellez-Arenas, A.; Santilli, R.M. *Hadronic Journal;* 3: No. 1, 130-176(Dec 1979). (CONF-7908175—).

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

The objective of this paper is to identify the algebraic structure of statistical mechanics for Newtonian systems as they actually occur in nature, that is, with forces nonderivable from a potenial. For this objective, we first review the definition of dissipative forces, nonconservative forces, and, more generally, variationally nonselfadjoint forces, the latter being the forces which violate the integrability conditions for the existence of a potential. We then review Liouville's theorem in its original formulation, and show that this theorem is indeed capable of incorporating variationally nonselfadjoint forces. By using this background, we then pass to the identification of a number of properties of the statistical description of Newtonian systems of the class considered. Our major result consists of the proof of a theorem according to which the time evolution law of densities for the statistical description of variationally nonselfadjoint Newtonian systems can always be represented in terms of brackets verifying the laws of the Lie-admissible algebras. Since these algebras are an algebraic covering of the Lie algebras, the conventional Lie-algebra formulation of statistical mechanics is recovered as a subcase when all forces are derivable from a potential. This result establishes the direct universality of the Lie-admissible algebras in statistical mechanics, in the sense that these algebras occur without redefinition of the local variables and physical quantities, as well as they hold for all systems of the class considered. We then tackle the problem of quantization of the statistics of dissipative phenomena, with particular reference to an algebraic reinterpretation of the approach by Prigogine and his collaborators. The paper ends with a number of comments indicating the physical relevance of our analysis.

19277 **Closed systems with nonconservative internal forces.** Tellez-Arenas, A. (Univ. of Orleans, France); Fronteau, J.; Santilli, R.M. *Hadronic Journal;* 3: No. 1, 177-195(Dec 1979). (CONF-7908175—). Contract AC02-78ER04742.

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

In this paper we identify the current state of the art for the construction of a closed system of interacting particles, that is, a system which, when isolated, verifies the conservation laws of the total energy, linear momentum, and angular momentum, as well as the uniform motion of the center of mass. The conventional approach via conservative forces is recalled, and its significance for the atomic structure is indicated. Jointly, we recall a generalization of these closed conservative systems proposed by one of us as a possible structure model of hadrons for extended constituents under mutual state of penetration of the wave packets. It consists of a closed system with variationally nonselfadjoint internal forces, that is, forces that are derivable as well as nonderivable from a potential. The original proposal in which the total conservation laws are imposed as subsidiary constraints is reviewed and analyzed in detail. In addition we discuss a statistical model of closed nonselfadjoint systems in which the total conservation laws are recovered at the asymptotic limit of large values of times. Even though our analysis is only classical, it confirms the achievement of the capability to represent closed systems as they actually occur in nature, that is, with unrestricted internal forces. It is expected that these systems can be consistently quantized via the Lie-admissible techniques, yielding a new, broader, approach to the structure of hadrons which deserves further studies.

19278 **Lie and Lie-admissible symmetries of dynamical systems.** Prince, G.E. (La Trobe Univ., Victoria, Australia); Leach, P.G.L.; Kalotas, T.M.; Eliezer, C.J.; Santilli, R.M.. *Hadronic Journal;* 3: No. 1, 390-439(Dec 1979). (CONF-7908175—). Contract AC02-78ER04742.

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

In this paper we recall Lie's method for the construction of the generators of Lie symmetry groups from given second-order equations of motion, and provide an illustrative example. The method is then adapted to the equations of motion in their equivalent first-order (vector field) form, and an example is discussed in terms of Hamilton's equations. The first-order version of Lie's method is then studied for the construction of Lie-admissible symmetry groups, that is, connected Lie groups realized in such a way to admit a non-Lie, but Lie-admissible lgebra in the neighborhood of the identity, as a nonconservative extension of the conventional Lie description of conservative mechanics. Some problems of using Lie's method for the construction of a Lie-admissible symmetry when the transformation includes a coordinate-dependent time change are discussed.

19279 **Initiation of the representation theory of Lie-admissible algebras of operators on bimodular Hilbert spaces.** Santilli, R.M. (Harvard Univ., Cambridge, MA). *Hadronic Journal;* 3: No. 1, 440-506(Dec 1979). (CONF-7908175—). Contract AC02-78ER04742.

From 2. workshop on Lie-admissible formulations; Cambridge, MA, USA (1 Aug 1979).

In this paper we recall the conventional, one-sided, linear theory of modules; we indicate its equivalence with the one-sided representation theory of algebras; and we point out its applicability to associative, Jordan, and Lie algebras. We then outline the broader, two-sided (left and right), linear theory of modules; we indicate its equivalence with the two-sided (left and right), linear theory of modules; we indicate its equivalence with the two-sided representation theory of algebras; and we point out its applicability also to associative, Jordan, and Lie algebras. For the latter algebras, the methods for the implementation of the conventional one-sided representation theory into the broader two-sided theory are also indicated. Furthermore, we show that the alternative algebras generally admit only the two-sided representation theyr for the linear case. These methods are then applied to the initiation of the representation theory of the Lie-asmissible algebras. We first show that these latter algebras, as for the alternative case, generally admit only the

two-sided linear representation theory, as a natural generalization of the two-sided theory of the associative and Lie algebras. A number of properties of the two-sided representation theory of the Lie-admissible algebras are pointed tation theory underlying Heisenberg's equations in quantum mechanics is in actuality of two-sided character, although as a trivial implementation of the conventional, one-sided theory. We then recall the Lie-admissible algebras are pointed out.

19280 **Canonical transformations and the Hamilton-Jacobi problem for general first-order derivable from a variational principle.** Sarlet, W.; (Harvard Univ., Cambridge, MA); Cantrijn, F. *Hadronic Journal;* 1: No. 5, 1497-1521(Dec 1978).

This paper is a continuation of a previous one on general first-order systems of ordinary differential equations derivable from a variational principle (self-adjoint systems). A class of transformations is introduced, comprising the solutions of self-adjoint systems as transformations to the initial state. This amounts to an enlargement of the formerly studied 1/sub c/-transformations, which leave the underlying symplectic matrix invariant, but fail to contain the solutions of the system, in case that matrix is time-dependent. Within the new class, called canonical transformations, the Hamilton-Jacobi problem is then properly posed. In general this turns out to give a coupled system of partial differential equations for the transformation formulas and the generating function. Finally it is shown how a doubling of the system in a very precise way can help to overcome this difficulty, and yields a true Hamilton-Jacobi equation for the generating function.

19281 **Schwartz distributions in the Lagrange variational problem.** Anton, H.; Bahar, L.Y. (Drexel Univ., Philadelphia, PA). *Hadronic Journal;* 1: No. 4, 1215-1226(Oct 1978).

Schwartz distributions are used to eliminate the necessity of imposing a priori conditions on the class of admissible functions in the Lagrange fixed end-point variational problem. This makes it possible to defer the imposition of conditions on the extremals until such conditions become apparent from physical considerations.

19282 **Pseudo-quartenion and pseudo-octonion algebras.** Okubo, S. (Univ. of Rochester, New York). *Hadronic Journal;* 1: No. 4, 1250-1278(Oct 1978).

Three new flexible Lie-admissible algebras permitting non-degenerate composition have been found. They are not power-associative and do not possess the unit element so as not to contradict the Hurwitz theorem. Moreover, they satisfy a cubic rather than customary quadratic identity enjoyed by the usual quartenion and octonion algebras. Their dimensions are respectively, two, four and eight, so as to justify calling them pseudo-quadratic, pseudo-quartenion, and pseudo-octonion algebras. Also, they satisy some modified Jordan relations.

19283 **Addendum to: on a possible Lie-admissible covering of the Galilei relativity in Newtonian mechanics for non-conservative and Galilei form-noninvariant systems.** Santilli, R.M. (Harvard Univ., Cambridge, MA). *Hadronic Journal;* 1: No. 4, 1279-1342(Oct 1978).

In this note I first present a needed clarification on the realization of Lie-admissible algebras for non-conservative Newtonian systems considerd in a recent paper. The following aspects are then treated (A) I introduce a new realization which is directly applicable to all nonconservative systems of the admitted class (local, class C and regular) via the solution of simple algebraic systems. (B) I indicated that such a realization yields compatible generalized formulations of Hamilton-admissible, Lie-admissible and symplectic-admissible type. (C) I show in details that such a realization is applicable to the construction of th eLie-admissible generalization of the Galilei relativity I proposed for nonconservative systems, and I work out a number of examples. (D) I then prove that, for the subclass of autonomous systems, the time-component of the proposesd generalized relativity is indeed universal, that is, it provides the form-invariant description of all systems considered, while being able to recover the conventional time component of the Galilei relativity at the limit of the null value of the Galilei symmetry-breaking forces. And, finally, (E) I prove that the dual Lie-admissible algebraic and sympletic-admissible geometrical character of the proposed generalized relativity is independent from the selected system of local coordinates, by therefore confirming the hope for a coordinate free-globalization of the symplectic-admissible geometry and relativity.

70 FUSION ENERGY

19284 **(DOE/ER—0076/1) Experimental plasma research project summaries.** (Department of Energy, Washington, DC (USA). Office of Energy Research). Oct 1982. 83p. NTIS, PC A05/MF A01. Order Number DE83007066.

The experimental plasma Research Branch has responsibility for developing a broad range of experimental data and new experimental techniques that are required for operating and interpreting present large-scale confinement experiments, and for designing future deuterium-tritium burining facilities. The Branch pursued these objectives by supporting research in DOE laboratories, other Federal laboratories, other Federal laboratories, universities, and private industry. Initiation and renewal of research projects are primarily through submission of unsolicited proposals by these institutions to DOE. Summaries of these projects are given.

19285 **(DOE/DP/40171—1) Plasma shifts of CVI Lyman lines to shorter wavelengths. Annual report, November 4, 1981-September 30, 1982.** Adcock, J.C.; Griem, H.R. (Maryland Univ., College Park (USA). Lab. for Plasma and Fusion Energy Studies). Dec 1982. Contract AS08-82DP40171. 11p. NTIS, PC A02/MF A01. Order Number DE83006949.

Blue shifts of ~ 85-60 mA have been observed for the first five members of the CVI Lyman series emitted from a laser-produced plasma plume at an electron density near $10^{21}cm^{-3}$. These shifts are much larger than density-dependent effects associated with electron collisions and inhomogeneities in ion-produced electric mcirofields and opposite to plasma polarization shifts according to the linearized Debye model. A nonlinear Debye-type model is consistent with the measurements.

19286 **(DOE/ER/10969—2) Simultaneous multipoint measurements of density gradients and temperature in a flame. Progress report, July 1, 1982-January 31, 1983.** Chang, R.K.; Chu, B.T.; Long, M.B. (Yale Univ., New Haven, CT (USA)). Feb 1983. Contract AC02-81ER10969. 8p. NTIS, PC A02/MF A01. Order Number DE83007291.

An account is given of recent progress in the development of nonintrusive optical diagnostic techniques and the application of these techniques to turbulent combustion systems. The primary focus of the work over the past year has been in: (1) the use of a broadband rotational CARS technique for the measurement of temperature in flames, and (2) the use of spontaneous Raman scattering to simultaneously map out the fuel gas concentration in a turbulent diffusion flame at 2500 points in a plane intersecting the flow. A summary of new results in each of these areas is given.

19287 **(DOE/ER/53117—T1) Saturated tearing modes in tokamaks with divertors.** Bateman, G. (Georgia Inst. of Tech., Atlanta (USA). School of Nuclear Engineering). Dec 1982. Contract AS05-81ER53117. 8p. NTIS, PC A02/MF A01. Order Number DE83005589.

We have developed a self-consistent theory of saturated tearing modes capable of predicting multiple magnetic island widths in tokamaks with no assumptions on the cross-sectional shape, aspect ratio, or plasma pressure. We are in the process of implementing this algorithm in the form of a computer code. We propose: (1) to complete, refine, document and publish this computer code; (2) to carry out a survey in which we vary the current profile, aspect ratio, cross-sectional shape, and pressure profile in order to determine their effect on saturated tearing mode magnetic island widths; and (3) to determine the effect of some externally applied magnetic perturbation harmonics on these magnetic island widths. Particular

attention will be paid to the coupling between different helical harmonics, the effect of multiple magnetic islands on the profiles of temperature, pressure and current, and the potential of magnetic island overlap leading to a disruptive instability.

19288 **(DOE/ET/53051—48) Shear Alfven waves in tokamaks.** Kieras, C.E. (Wisconsin Univ., Madison (USA)). Dec 1982. Contract AC02-76ET53051. 134p. NTIS, PC A07/MF A01; 1. Order Number DE83007194.

Portions are illegible in microfiche products. Original copy available until stock is exhausted. Thesis.

Shear Alfven waves in an axisymmetric tokamak are examined within the framework of the linearized ideal MHD equations. Properties of the shear Alfven continuous spectrum are studied both analytically and numerically. Implications of these results in regards to low frequency rf heating of toroidally confined plasmas are discussed. The structure of the spatial singularities associated with these waves is determined. A reduced set of ideal MHD equations is derived to describe these waves in a very low beta plasma.

19289 **(DOE/ET/53066—T1) Theory of waves, instabilities and transport in thermonuclear plasmas. Final report.** Harris, E.G. (Tennessee Univ., Knoxville (USA). Dept. of Physics). Oct 1981. Contract AS05-76ET53066. 4p. (ORO—2598-12). NTIS, PC A02/MF A01. Order Number DE83004439.

A brief historical review of this research program is given. (MOW)

19290 (INIS-SU—104, pp 100-104) **Neutron emission from the "UTRO" pulsed thermonuclear device.** Burtsev, V.A.; Dyatlov, V.D.; Litunovskij, V.N.; Popytaev, A.N.; Titov, V.A. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Technique of investigations into neutron radiation in experiments on low-compression heating of dense plasma in the UTRO linear theta-pinch with a strong (B<=5T) fast-rising (tausub(fr)<=0.5 μs) magnetic field is described. To determine neutron yield, an activation detector representing paraffin moderator of 50x50x20 cm dimensions having seven Geiger counters was used. Neutron burst duration was determined by means of a scintillation plastic detector of high time resolution. Given are dependences of neutron yield on plasma concentration for two values of solenoid current Isub(s)=1.4 MA and Isub(s)=1.0 MA. Analysis of the dependences obtained shows that neutron yield considerably increases with the increase of solenoid discharge current 1.4 times. Especially this increase is seen for high plasma concentrations. Maximum detected neutron yield constitutes 10^7 neutr/pulse. Dependence of neutron pulse duration on initial deuterium pressure in a discharge chamber in the range of 0.1-1 torr is given as well. It is concluded that there is a possibility for increasing plasma neutron radiation power of the fast linear theta-pinch when increasing magnetic field in the solenoid and initial pressure in the discharge chamber.

19291 (INIS-SU—104, pp 105-109) **Detectors for the investigation of neutron emission of thermonuclear devices.** Burtsev, V.A.; Dyatlov, V.D.; Kuz'min, V.A.; Popytaev, A.N. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Peculiarities of experimental set-ups on measurement of neutron radiation generated with different thermonuclear devices are considered. A set of apparatuses for diagnostics of neutron radiation at thermonuclear devices of different types has been developed and constructed. The set includes a high- sensitive activation detector filled with liquid scintillator with radiactive indicator(^{148}I, ^{109}Ag, ^{103}Rh), activation detector with plastic scintillator, as well as detector principle of operation of which is based on detection of gamma radiation of radiative neutron capture. Time characteristics of the radiation are measured with scintillation detectors of 10^{-8}s time resolution. Simultaneously, time and integral measurements of neutron fluxes are performed by means of activation- scintillation detectors which efficiency amounts to $1.5x10^{-2}$, and time resolution-$2.5x10^{-8}$s.

19292 **(LA—9588-MS) Nonthermal ultrasoft x-ray spectra on ZT-40M.** Watt, R.G.; Thomas, K.S.; Little, E.M. (Los Alamos National Lab., NM (USA)). Dec 1982. Contract W-7405-ENG-36. 13p. NTIS, PC A02/MF A01. Order Number DE83007123.

Thin-foil differential transmission measurements of ultrasoft x rays have been performed on the ZT-40M device at Los Alamos National Laboratory. Time histories of the ratio of intensities seen through 1-mil and 2-mil Be foils are in reasonable (+-50 eV) agreement with Thomson scattering measurements up to approximately 3 ms into the discharge, but examination (at any particular time) of the intensity-vs-foil thickness for all four available foils shows evidence of pronounced nonthermal characteristics: In an effort to explain the observation, the detailed theory of emission for a runaway electron distribution function will be examined, and predictions based on this theory will be shown capable of reproducing the observed behavior. Comments on the ability of oxygen impurity radiation in the 600- to 800-eV range to also fit the observation will be made.

19293 **(NRL-MR—5018) Effects of ion-acoustic instability on ligh-ion-beam transport in deuterium channels.** Colombant, D.G.; Manheimer, W.M. (Naval Research Lab., Washington, DC (USA)). 26 Jan 1983. Contract AI08-79DP40092. 11p. NTIS, PC A02/MF A01. Order Number DE83007258.

Moderate density deuterium channels can be ion-acoustic unstable when bunched high-intensity light ion beams are propagated into them. The MHD response of these channels is investigated under these conditions. Anomalous effects like enhanced energy deposition, anomalous electron and ion heating and anomalous resistivity are included into the model. Only at low channel densities does the instability cause an additional slowing-down of the beam. However, the hydrodynamic motion of the channel remains unaffected.

19294 **(ORNL/TM—8547) Atomic physics processes in radial transport calculations.** Hogan, J.T. (Oak Ridge National Lab., TN (USA)). Feb 1983. Contract W-7405-ENG-26. 40p. NTIS, PC A03/MF A01. Order Number DE83007172.

These lectures were intended as preparation for detailed discussions of the role of atomic and molecular physics in confinement research at the 1982 NATO Advanced Study Institute. They begin with a description of the major approaches to magnetic confinement: tandem (ambipolar) mirrors with their associated auxiliary barriers, tokamaks, and stellarators. The leading alternatives, the ELMO Bumpy Torus and the reversed field pinch, are also treated. The evolution equations for particle, energy, and (where relevant) field diffusion are presented and discussed. This is the context for atomic and molecular processes relevant to confinement.

19295 **(PPPL—1971) High-energy D_2O submillimeter laser for plasma diagnostics.** Semet, A.; Johnson, L.C.; Mansfield, D.K. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jan 1983. Contract AC02-76CH03073. 24p. NTIS, PC A02/MF A01. Order Number DE83007246.

A narrow line optically pumped D_2O laser operating at 385 μm has delivered more than 5 J in pulses longer than 3 μsec using a large aperture unstable resonator cavity design. Pulse levels which are > 1 J and 1 μsec are necessary for a single shot ion temperature measurement by Thomson scattering in large tokamaks. Experiments have, for the most part, been conducted at a 360 J, 5 μsec CO_2 laser pump level where high efficiency (~ 2.5 J at 385 μm) has been obtained. These are the highest energies reported to date in the far infrared. In addition, the pulse length has been extended beyond the vibrational relaxation time.

19296 (PPPL—1974) Observation of magnetized-ion thermal effects on lower-hybrid waves. Wurden, G.A.; Wong, K.L.; Skiff, F.; Ono, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 13p. NTIS, PC A02/MF A01. Order Number DE83007244.

Finite ion Larmor radius modification of lower-hybrid waves in the ACT-1 toroidal plasma at frequencies $\omega \simeq 4$ to 8 ω/sub ci/, close to the lower-hybrid resonance layer, is observed experimentally. Probe and CO_2 laser scans of the wave amplitude show interference patterns at frequencies above each ion cyclotron harmonic. Modeling with a hot-ion, electrostatic ray tracing code and Fourier reconstruction of the waveform suggests that linear mode conversion to hot plasma waves is occurring.

19297 (PPPL—1976) Lower-hybrid heating and current drive on PLT. Hooke, W.; Bernabei, S.; Boyd, D. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 13p. NTIS, PC A02/MF A01. Order Number DE83007245.

Steady currents up to 165 kA for 3.5 seconds and 420 kA for 0.3 seconds have been maintained by 800 MHz lower hybrid waves. For line-averaged densities up to 7×10^{13} cm^{-3} the current is maintained with no input power from the ohmic heating transformer. The waves are launched with an array of six waveguides. Measurements of X rays and electron cyclotron radiation show that the rf power produces and maintains a suprathermal tail of electrons apparently independent of the number of fast electrons in the plasma prior to turning on the rf power. Measurements of current-drive efficiency and the electron tail provide direct evidence for a resonant wave-particle interaction. The radial profile of the rf-sustained current inferred from x-ray measurements is peaked in the center of the plasma and appears to obey the same q-value restraints as the inductively driven ohmic heating current. Current drive is observed to be accompanied always by radiation at frequencies $\geq \omega$/sub ce/ and $\leq \omega$/sub pe/. The connection between this radiation and the current-drive mechanism is under study.

19298 (PPPL—1978) Magnetic dipole lines in the $3s^23p$/sup x/ configuration of elements from copper to molybdenum. Denne, B.; Hinnov, E.; Suckewer, S. Cohen, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01. Order Number DE83007249.

A number of spectrum lines arising from magnetic dipole transitions in the $3s^23p^5$, $3s^23p^4$, $3s^23p^3$, $3s^23p^2$, $3s^23p$, and 3s3p electron configurations in elements $29 \leq z \leq 42$ have been identified. The lines were observed in the PLT tokamak discharges into which the appropriate elements were introduced by means of laser blowoff. The identifications are based on time- and space-dependence of the observed emissivities, and the systematic consistency of the observed wavelengths with isoelectronic extrapolations based on known lower-z elements.

19299 (PPPL—1979) Diamagnetic flux measurement using the PDX TF coils. Thomas, P. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 20p. NTIS, PC A02/MF A01. Order Number DE83007248.

The diamagnetism of plasmas in PDX has been measured using the toroidal field coils as the equivalent of the conventional diamagnetic loop. The extremely low inductive coupling between the toroidal and poloidal coil systems makes the measurement feasible. The main difficulty arises from the change in the TF coil resistance due to Joule heating, compounded by the nonlinearity and sharp temperature dependence of the resistance of the joints in the TF coils. The measurement method, details of the experimental system, and illustrative results are presented.

19300 (UCID—19675) Influence of centering forces on IFR hose instability. Buchanan, H.L. (Lawrence Livermore National Lab., CA (USA)). 6 Dec 1982. Contract W-7405-ENG-48. 12p. NTIS, PC A02/MF A01. Order Number DE83006719.

The appropriate centering force terms are added to the ion-focused regime hose equations and their effect on hose development is calculated. It is found that while hose at very high frequencies is stabilized, the overall suppression is only moderate and other stabilization processes need to be explored.

19301 (UCRL—87941) Acceleration of magnetized plasma rings. Hartman, D.; Eddleman, J.; Hammer, J.H. (Lawrence Livermore National Lab., CA (USA)). 16 Nov 1982. Contract W-7405-ENG-48. 5p. (CONF-821124—15). NTIS, PC A02/MF A01. Order Number DE83006609.

From 5. symposium on physics and technology of compact toroids in the magnetic fusion energy program; Belevue, WA, USA (16 Nov 1982).

One scheme is considered, acceleration of a ring between coaxial electrodes by a B/sub θ/ field as in a coaxial rail-gun. If the electrodes are conical, a ring accelerated towards the apex of the cone undergoes self-similar compression (focussing) during acceleration. Because the allowable acceleration force F/sub a/ $= \kappa$ U/sub m//R ($\kappa < 1$) increases as R^{-2}, the accelerating distance for conical electrodes is considerably shortened over that required for coaxial electrodes. In either case however, since the accelerating flux can expand as the ring moves, most of the accelerating field energy can be converted into kinetic energy of the ring leading to high efficiency.

19302 Radiation of ion acoustic waves by a Langmuir soliton moving with acceleration. Kou, P.K. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Tsintsadze, N.L.; Tskakaya, D.D. (AN Gruzinskoj SSR, Tbilisi. Inst. Fiziki). *Zhurnal Eksperimental'noi i Teoreticheskoi Fiziki;* **82**: No. 5, 1449-1456(May 1982). (In Russian).

For English translation see the journal Soviet Physics - JETP (USA).

A theory of emission of ion-sound waves by a Langmuir soliton moving with acceleration is developed. The acceleration is due to the nonuniform distribution of the density in the plasma. Spatial distribution of the radiation field for linear and quadratic profiles of plama density inhomogeneity is studied. An expression is obtained for energy losses by a soliton due to radiation. The problem under consideration may be interesting for estimation requirements to plasma homogeneity degree on the experimental discovery of a soliton and on the study of its properties.

19303 Temporal growth rate of filamentation instability in a strongly ionised magnetoplasma. Sharma, J.K.; Kumar, S. (Indian Inst. of Tech., New Delhi. Dept. of Physics; Indian Inst. of Tech., New Delhi. Centre of Energy Studies); Tewari, D.P. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). *Journal of Physics D: Applied Physics;* **14**: No. 6, 1031-1039(14 Jun 1981).

An investigation of the temporal growth rate of filamentation instability of a uniform laser beam propagating along and perpendicular to the static magnetic field in a strongly ionised plasma is presented. The nonlinearity of the dielectric constant arises on account of diffusion of non-uniformly heated carriers (on account of fluctuations in the intensity of the main beam). Both the mechanism of energy loss of electrons, namely the thermal conduction and collisions with heavy particles have been taken into consideration. It is found that the temporal growth rate is maximum for an optimum value of the beam power and for an optimum size of the perturbation. The effect of a self-generated or externally applied magnetic field is to enhance the temporal growth rate of filamentation instability for whistler and upper hybrid mode propagation of the laser beam in the plasma. The effect of absorption is, however, to suppress the growth rate.

19304 Bragg scattering of EM waves from ion-beam mode wave packets. Alport, M.J.; D'Angelo, N. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). *Plasma Physics;* **23**: No. 1, 1-14(Jan 1981).

Bragg scattering of 3 cm wavelength microwave radiation is studied in the laboratory, using ion-beam mode wave trains in a double-plasma device as the scattering medium. Detailed tests are performed of the Bragg scattering formula and of theoretical predictions for the EM reflectivity of a plasma wave packet.

19305 **Current driven ion electrostatic waves in a magnetized collisional plasma.** Willett, J.E.; Crowder, C.D. (Missouri Univ., Columbia (USA)). *Plasma Physics;* **23**: No. 1, 23-30(Jan 1981).

The stability of ion electrostatic waves propagating at arbitrary angles with respect to a uniform, static magnetic field is studied in a collisional, fully ionized plasma carrying a field-aligned current. It is shown that for arbitrary values of the ratio of ion-cyclotron frequency ωsub(ci) to ion-acoustic wave frequency ωsub(a), instability may result from normally dissipative terms such as electron thermal conductivity and resistivity. Growth rate formulas are derived using fluid equations and reduced to simple form for ωsub(ci)/ωsub(a)>>1 and ωsub(ci)/ωsub(a)<<1.

19306 **Preliminary observations of electrostatic end plugging in tandem cusp experiments.** Jones, R. (Plasma Physics Research Lab., Colonia, NJ (USA)). *Plasma Physics;* **23**: No. 1, 31-33(Jan 1981).

Electrostatic potential wells are observed in a linear solenoid device end plugged by an array of tandem spindle and toroidal cusps.

7002 Fusion Power Plant Technology

REFER ALSO TO CITATION(S) 18438, 18486

19307 **(AD-A—116736/0) Tradeoffs in the modularization of large fusion systems. Master's thesis.** McQuade, M.K. (Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA)). Dec 1981. 36p. NTIS, PC A03/MF A01.

The modularization of magnetic confinement fusion systems was investigated, with an immediate view to facilitating maintenance and repair, and an ultimate view of maximizing commercial fusion reactor availability. The advantages and disadvantages of modularization versus unitary construction were examined for the reactor plant in the construction phase, and for vacuum walls, dewars, support structures and magnet coils in the operational phase. A brief examination of remote handling was included, since remotely operated equipment will be vital to the design and success of any modularization configuration. Particular emphasis was placed on magnet systems since they are, to a large degree, the heart of any magnetic fusion reactor; they are large, complex and technologically demanding; and their modularization and reliability are especially controversial.

19308 **(DOE/ER—0046/11) Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.** (Department of Energy, Washington, DC (USA). Office of Fusion Energy). Nov 1982. Contract AC06-76FF02170. 248p. NTIS, PC A11/MF A01; 1. Order Number DE83006918.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Separate abstracts were prepared for 12 of the included sections.

19309 (DOE/ER—0046/11, pp 3-9) **RTNS-II irradiations and operations.** Logan, C.M.; Heikkinen, D.W. (Lawrence Livermore National Lab., CA). Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The objectives of this work are operation of RTNS-II (a 14-MeV neutron source facility), machine development, and support of the experimental program that utilizes this facility. Experimenter services include dosimetry handling, scheduling, coordination, and reporting. RTNS-II is dedicated to materials research for the fusion power program. Its primary use is to aid in the development of models of high-energy neutron effects. Such models are needed in interpreting and projecting to the fusion environment engineering data obtained in other neutron spectra. Irradiations were performed for a total of twenty-nine different experimenters during this quarter. A JOEL 200 CX TEM and other post-irradiation test equipment have been installed.

19310 (DOE/ER—0046/11, pp 10-24) **Dual-temperature vacuum-insulated furnace system.** Panayotou, N.F. Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The objective of this work is to determine the effects of high energy neutrons on damage production and evolution, and the relationship of these effects to effects produced by fission reactor neutrons. The specific objective of the current work is to develop a furnace system which will efficiently utilize the primary irradiation volume of the Rotating Target Neutron Source (RTNS)-II.

19311 (DOE/ER—0046/11, pp 43-53) **Developments in small-scale strength and impact testing.** Lucas, G.E.; Scheckherd, J.W.; Odette, G.R. (Univ. of California, Santa Barbara). Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

This report updates the developments of two test techniques, namely shear punch testing and miniaturized impact specimen testing. In shear testing, a very strong correlation has been found for a wide range of materials between the uniaxial tensile yield strength of a material and the yield load exhibited during a shear punch test, and between the ulimate tensile strength in tension and the maximum load in shear. In miniaturized impact testing, one-third size Charpy V-notch (CVN) specimens have been tested for a variety of commercial and model pressure vessel steels. Although the curves of normalized impact energy as a function of test temperature do not coincide for the small and standard CVNs, the small CVNs, do appear useful for tracking transition temperature shift and perhaps upper shelf energy changes.

19312 (DOE/ER—0046/11, pp 54-71) **Fundamental flow and fracture analysis of prime candidate alloy (PCA) for path a (austenitics).** Lucas, G.E. (Univ. of California, Santa Barbara); Jayakumar, M.; Maziasz, P.J. Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

Room temperature microhardness tests have been performed on samples of Prime Candidate Alloy (PCA) for the austenitics (Path A) subjected to various thermomechanical treatments (TMT). The TMTs have effected various microstructures, which have been well characterized by optical metallography and TEM. For comparison, microhardness tests have been performed on samples of N-lot, DO heat and MFE 316 stainless steel with similar TMTs. The results indicate that the TMTs investigated can significantly alter the microhardness of the PCA in a manner which is consistent with microstructural changes. Moreover, while PCA had the lowest microhardness of the four alloys types after cold working, its microhardness increased while the others decreased to comparable values after aging for 2 h at 750°C.

19313 (DOE/ER—0046/11, pp 72-80) **Effect of helium irradiation on fracture modes.** Hanamura, T.; Jesser, W.A. (Univ. of Virginia, Charlottesville). Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The objective of this work is to determine the crack opening mode during in-situ HVEM tensile testing and how it is influenced by test temperature and helium irradiation. Most cracks were mixed mode I and II. However, between 250°C and room temperature the effect of helium irradiation is to increase the amount of mode I crack propagation. Mode II crack opening was observed as grain boundary sliding initiated by a predominantly mode I crack steeply intersecting the grain boundary. Mode II crack opening was absent in irradiated specimens tested between 250°C and room temperature, but could be restored by a post irradiation anneal.

19314 (DOE/ER—0046/11, pp 81-100) **Development of anisotropic distributions of network dislocation burgers vectors in alloys irradiated under stress.** Gelles, D.S. (Westinghouse Hanford Co., Richland, WA); Garner, F.A.; Adams, B.L. Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The object of this effort is to provide models for the microstructural development that occurs in irradiated alloys and thereby predict the deformation expected in environments that lie outside the range of available data. The deformation arising from irradiation creep in fusion environments requires knowledge of the evolution of Frank interstitial loops and network dislocations.

19315 (DOE/ER—0046/11, pp 101-112) **Acceleration of irradiation creep with fluence: absence of a definitive microstructural record.** Garner, F.A. (Hanford Engineering Development Lab., Richland, WA); Wolfer, W.G. Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The object of this effort is to develop models which describe the evolution and behavior of radiation-induced microstructure and to apply these models to the prediction of material response in environments that lie outside the current range of available data. The irradiation creep rate of AISI 316 is known to accelerate during the period when the alloy matrix undergoes a microchemical evolution. No concurrent change is observed in the densities and distributions of the components of microstructure responsible for creep deformation however. A model has been developed to explain how the network dislocation density and the Frank loop density can be relatively insensitive to changes in matrix chemistry while the creep rate can be changed substantially.

19316 (DOE/ER—0046/11, pp 115-150) **Microstructural and microchemical comparisons of AISI 316 irradiated in HFIR and EBR-II.** Brager, H.R.; Garner, F.A. Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The objective of this effort is to provide microstructural data that will provide guidance for the development of swelling correlations for fusion applications.

19317 (DOE/ER—0046/11, pp 151-166) **Influence of helium injection schedule and prior thermomechanical treatment on the microstructure of ion-irradiated type 316 stainless steel.** Kohyama, A.; Ayrault, G.; Loomis, B.A. (Argonne National Lab., IL). Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The objective of this work is to determine the evolution of the microstructure in first wall materials during irradiation with special emphasis on the effects of helium production, displacement damage rates and temperature.

19318 (DOE/ER—0046/11, pp 167-206) **Correlation of charged particle and neutron-induced radiation damage: the ADIP experiment revisited.** Garner, F.A. (Westinghouse Hanford Co., Richland, WA). Nov 1982. NTIS, PC A11/MF A01; 1.

The purpose of this study is to explore the applicability of dual-ion bombardment studies to the development of fission-fusion correlations.

19319 (DOE/ER—0046/11, pp 207-220) **Void swelling of proton-irradiated stainless steel at large displacement levels.** Kumar, A. (Univ. of Missouri, Rolla); Garner, F.A. Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The purpose of this study is to determine whether saturation of void swelling in AISI 316 stainless steel can be made to occur at any level relevant to engineering design and to decide whether saturation is sensitive to irradiation variables such as helium/dpa ratio or simulation artifacts such as injected interstitials.

19320 (DOE/ER—0046/11, pp 221-231) **Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content.** Brager, H.R.; Garner, F.A. (Westinghouse Hanford Co., Richland, WA). Nov 1982. NTIS, PC A11/MF A01; 1.

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1982.

The purpose of this study is to identify the microstructural and microchemical origins of the compositional dependence of radiation-induced swelling, creep and changes in mechanical properties.

19321 (DOE/ER—0159) **Magnetic fusion energy and computers. The role of computing in magnetic fusion energy research and development (second edition).** (Department of Energy, Washington, DC (USA). Office of Fusion Energy). Jan 1983. 156p. NTIS, PC A08/MF A01. Order Number DE83006565.

This report documents the structure and uses of the MFE Network and presents a compilation of future computing requirements. Its primary emphasis is on the role of supercomputers in fusion research. One of its key findings is that with the introduction of each successive class of supercomputer, qualitatively improved understanding of fusion processes has been gained. At the same time, even the current Class VI machines severely limit the attainable realism of computer models. Many important problems will require the introduction of Class VII or even larger machines before they can be successfully attacked.

19322 (DOE/ET/51013—66) **Design features of T-2, a torsatron reactor with continuous, demountable coils.** Potok, R.E.; Cohn, D.R.; Lidsky, L.M. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Dec 1982. Contract AC02-78ET51013. 71p. (PFC/RR—82-35). NTIS, PC A04/MF A01; 1. Order Number DE83006917.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report describes the features of the continuous-winding torsatron reactor T-2, and presents numerical computations of the reactor's ion thermal conductivity. The helical magnet system is comprised of modular units, with the coils connected through demountable, resistive joints at the module interfaces. Reactor maintenance can be performed through the access existing between the helical coils (without moving the coils). This design feature combines desirable features of both the continuous and modular coil concepts; the continuous current paths provide more vacuum rotational transform (t) and reduce the out-of-plane forces on the coils, while the demountable joints allow for magnet maintenance and replacement. The blanket modules would be of moderate size (the blanket structure of the illustrative reactor design was divided into three sections for each of the 19 field periods, the sections weighing 500, 100, and 25 tonnes). Our results indicate that the coil winding law can be optimized to produce adequate access and good flux surface quality. Because of the high values of ion conductivity, it may not be possible to obtain sufficiently large values of n tau for ignition unless the coil minor radius and aspect ratio are large. The presence of large ambipolar electric fields, however, could reduce the ion conductivity to values which would allow for reactor designs with major radii of 20 to 30 meters and thermal power levels less than 4000 MW.

19323 (DOE/ET/51015—61) **Textor bundle divertor.** Yang, T.F.; Wan, A.; Gierszewski, P.; Rapperport, E.; Montgomery, D.B. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). 1982. Contract AC02-78ET51013. 35p. (PFC/RR—82-33). NTIS, PC A02/MF A01; 1. Order Number DE83006041.

Portions are illegible in microfiche products.

This report presents a preliminary bundle divertor conceptual design for installation on the TEXTOR tokamak. An advanced cascade T-shaped coil configuration is used. This divertor design has the following important characteristics: (1) the current density in the conductor is less than 6 kAmp/cm^2, and the maximum field is less than 6 Tesla; (2) the divertor can be operated at steady-state either for copper or superconducting conductors; (3) the power consumption is about 7 MW for a normal conductor; (4) the divertor can be inserted into the existing geometry of TEXTOR; (5) the ripple on axis is only 0.3% and the mirror ratio is 2 to 4; (6) the

stagnation axis is concave toward the plasma, therefore q/sub D/ is smaller, the acceptance angle is larger, and the efficiency may be better than the conventional circular coil design.

19324 **(DOE/ET/52015—T21) Helium generation in fusion-reactor materials. Progress report, October-December 1982.** Kneff, D.W.; Farrar, H. IV. (Rockwell International Corp., Canoga Park, CA (USA). Energy Systems Group). 1982. Contract AT03-76ET52015. 6p. NTIS, PC A02/MF A01. Order Number DE83005356.

The objectives of this work are to measure helium generation rates of materials for Magnetic Fusion Reactor applications in the Be(d,n) neutron environment, to characterize this neutron environment, and to develop helium accumulation neutron dosimeters for routine neutron fluence and energy spectrum measurements in Be(d,n) and Li(d,n) neutron fields.

19325 **(DOE/ET/52027—6) Ion-bombardment effects on the fatigue life of stainless steel under simulated fusion first-wall conditions.** Kohse, G.E. (Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Nuclear Engineering). Feb 1983. Contract AC02-78ET52027. 116p. NTIS, PC A06/MF A01. Order Number DE83007145.

Thesis.

An experiment which uses the MITR-II 5 MW research reactor to simulate several aspects of the anticipated environment of a fusion reactor first wall is described. Pressurized tube specimens are subjected simultaneously to stress and temperature cycling, surface bombardment by energetic helium and lithium ions and bulk irradiation by high-energy neutrons. Analysis of the samples is aimed primarily at determining the behavior of the ion bombarded surface layer, which has a depth of 2.5 μm, with particular reference to possible effects on the fatigue life of the material.

19326 **(DOE/ET/52029—T2) Assessment of potential research areas for improving rotating electrical machines for pulsed-power applications. Publication No. XM-12.** Weldon, W.F. (Texas Univ., Austin (USA). Center for Electromechanics). 1979. Contract AS05-77ET52029. 18p. NTIS, PC A02/MF A01. Order Number DE83005101.

Inertial energy storage devices offer the most attractive combination of energy density, discharge efficiency, and cost per unit of energy over a wide range of discharge times. Homopolar conversion has been successfully demonstrated on a repeatable basis and is presently practical for discharge times of several milliseconds up to several tens of seconds. The compulsator concept, as yet unproven, appears to be applicable for pulse times of a few milliseconds down to less than 100 microseconds. Experiments now underway will explore the upper portion of this range while experiments exploring the lower, faster portion of the range are anticipated over the next few years.

19327 **(DOE/ET/52029—T3) Mechanical energy storage and electromechanical energy conversion. Publication No. PN-65.** Weldon, W.F. (Texas Univ., Austin (USA). Center for Electromechanics). 1980. Contract AS05-77ET52029. 52p. NTIS, PC A04/MF A01; 1. Order Number DE83005102.

Portions are illegible in microfiche products.

Mechanical energy storage techniques can be characterized as one of two types, either being stored statically, by deforming or straining some field; or kinetically in the velocity imparted to some mass. Characteristically static energy storage techniques are more amenable to longer term energy storage because they require no power input to sustain the stored energy while dynamic techniques are generally applicable for shorter term storage since they are dissipative (frictional losses). Details of homopolar generators are presented.

19328 **(DOE/ET/52029—T4) Pulsed-power-supply development for fusion applications: special research support agreement.** (Texas Univ., Austin (USA). Center for Electromechanics). 1980. Contract AS05-77ET52029. 6p. NTIS, PC A02/MF A01. Order Number DE83005135.

This is a final summary describing research and development work carried out by the Center for Electromechanics at The University of Texas at Austin (CEM-UT) for the Department of Energy during calendar years 1978, 1979, and 1980. The general purpose of this special research support program was to conduct research on pulsed power supply development for fusion applications in the areas of homopolar generators (HPGs), tokamak ohmic heating stuides, switching, and pulse compression technology.

19329 **(DOE/ET/52040—T6) Effects of nuclear elastic scattering and modifications of ion-electron equilibration power on advanced-fuel burns.** Galambos, J.D. (Illinois Univ., Urbana (USA). Fusion Studies Lab.). 1983. Contract AC02-76ET52040. 126p. (COO—2218-258). NTIS, PC A07/MF A01. Order Number DE83007140.

Thesis.

The effects of Nuclear Elastic Scattering (NES) of fusion products and modifications of the ion-electron equilibration power on D-T and D-based advanced-fuel fusion plasmas are presented here. The processes causing the modifications to the equilibration power included here are: (1) depletion of low-energy electrons by Coulomb collisions with the ions; and (2) magnetic field effects on the energy transfer between the ions and the electrons. Both NES and the equilibration modifications affect the flow of power to the plasma ions, which is an important factor in the analysis of advanced-fuels. A Hot Ion Mode (HIM) analysis was used to investigate the changes in the minimum ignition requirements for Cat-D and D-^{3}He plasmas, due to the changes in the allowable T/sub i/T/sub e/ for ignition from NES and equilibration modifications. Both of these effects have the strongest influence on the ignition requirements for high temperature (>50 keV), low beta (<15%) plasmas, where the cyclotron radiation power loss from the electrons (which is particularly sensitive to changes in the electron temperature) is large.

19330 **(DOE/ET/52048—27) Modular coil design for UWTOR-M stellarator reactor.** Yuan, K.Y.; Sanders, R.; Sviatoslavsky, I.N.; Van Sciver, S.W. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). Dec 1982. Contract AC02-78ET52048. 5p. (UWFDM—498; CONF-821108—19). NTIS, PC A02/MF A01; 1. Order Number DE83005533.

From Applied superconductivity conference; Knoxville, TN, USA (30 Nov 1982).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The latest developments in the conceptual modular coil design for UWTOR-M stellarator reactor are presented. The emphasis in the design is toward the modularity, maintainability and technology feasibility of the discrete windings. The stress and deformation of the coils are calculated and overall compatibility of the various components studied. The results show that all the preliminary design objectives can be met with reaaonable cross sectional dimensions of the magnet structure. Although more refined studies are needed for the structural details, the study indicates that the envisaged design is feasible with moderate extrapolations to the present day technology.

19331 **(EGG-M—10982) Consequences of a tube rupture in a fusion-reactor blanket.** Herring, J.S.; Roth, P.A.; Rouhani, S.Z. (EG and G Idaho, Inc., Idaho Falls (USA)). 1982. Contract AC07-76ID01570. 6p. (CONF-821106—23). NTIS, PC A02/MF A01; 1. Order Number DE83005398.

From Annual meeting of heat transfer and energy conversion; Los Angeles, CA, USA (14 Nov 1982).

Portions are illegible in microfiche products.

Recent fusion reactor conceptual designs have proposed the use of pressurized water as the coolant for the first wall and blanket. Much is known from fission reactors about the thermal hydraulics of pressurized water including accidents in which some of the coolant is lost. However, in the design of first walls and blankets for fusion reactors, the consequences of a cooling tube failure within the blanket are not yet clearly understood. This paper analyzes the effects of such off-normal events on fusion reactor components.

19332 **(EGG-M—15482) Ion-gun tritium-permeation testing.** Longhurst, G.R.; Holland, D.F.; Miller, L.G.; Causey, R.A. (EG and G Idaho, Inc., Idaho Falls (USA)). 1982. Contract AC07-76ID01570. 6p. (CONF-821165—1). NTIS, PC A02/MF A01; 1. Order Number DE83005587.

From 16. international electric propulsion conference; New Orleans, LA, USA (17 Nov 1982).

Portions are illegible in microfiche products.

There is considerable uncertainty within the fusion community regarding the rate at which tritium will permeate fusion-reactor structures and coolant streams. Present estimates vary by several orders of magnitude. Experiments to resolve this uncertainty are in progress at several laboratories. Many of these experiments make use of ion sources to accomplish light-ion implantation, provide surface sputtering, and assist in diagnostic analyses. In one such experiment at the Idaho National Engineering Laboratory (INEL), deuterium was implanted into Type 304 stainless steel at 753 K. Measurements of the deuterium permeation rate showed that implantation effects strongly influence permeation of oxidized surfaces, but that continued implantation with its attendant surface modification resulted in diminution of implantation effects.

19333 **(EGG-M—15882) Analysis of fusion-blanket cooling-tube ruptures.** Roth, P.A. (EG and G Idaho, Inc., Idaho Falls (USA)). 1982. Contract AC07-76ID01570. 6p. (CONF-821103—77). NTIS, PC A02/MF A01; 1. Order Number DE83005397.

From American Nuclear Society winter meeting; Washington, DC, USA (14 Nov 1982).

Recent fusion reactor conceptual designs have proposed the use of pressurized water as the coolant for the first wall and blanket. Much is known from fission reactors about the thermal hydraulics of pressurized water including accidents in which some of the coolant is lost. However, in the design of first walls and blankets for fusion reactors, the consequences of a cooling tube failure within the blanket are not yet clearly understood. This paper analyzes the effects of such off-normal events on fusion reactor components.

19334 **(EGG-M—19882) Experimental investigation of muon-catalyzed fusion.** Jones, S.E. (EG and G Idaho, Inc., Idaho Falls (USA)). 1982. Contract AC07-76ID01570. 6p. (CONF-821103—75). NTIS, PC A02/MF A01. Order Number DE83005395.

From American Nuclear Society winter meeting; Washington, DC, USA (14 Nov 1982).

Data will be presented from the first experimental determination of the total yield of the muon-catalyzed fusion reaction: $\mu^- + d + t \rightarrow \mu^- + {}^4He + n + 17.6$ MeV. In this reaction, an elementary particle known as the muon induces fusion without being affected by the nuclear reaction. Thus, it serves as a catalyst in the usual sense. The muon catalyzes many fusion reactions before decaying into an electron and neutrinos. The process is known as cold fusion since it proceeds rapidly for temperatures in the range from room temperature to about 800°C. An obvious advantage over thermal fusion approaches is that there is no plasma to contain. On the other hand, the muons which drive the reaction must be continually produced using a particle accelerator.

19335 (INIS-SU—104, pp 331-335) **^{237}Np production in the uranium blanket of a hybrid thermonuclear reactor.** Marin, S.V.; Orlov, V.V.; Shatalov, G.E.; Stavisskij, Yu.Ya.; Smirenkin, G.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.:. 1980. (In Russian). NTIS (US Sales Only), PC A16/MF A01.

From 5. national Soviet conference on neutron physics; Kiev, Ukrainian SSR (15 Sep 1980).

Possibility for production of considerable quantities of ^{237}Np in a hard neutron spectrum of the first layers of thermonuclear reactor uranium blanket is considered. Calculation of the neutron spectrum and dynamics of nuclear transformations in the blanket of depleted uranium was carried out according to the BURNEL program. It is established that ^{237}Np production practically completely results from the (n, 2n) reaction on ^{236}U. Contribution from the (n, 3n) nuclear reaction on ^{238}U nuclei constitutes less than 0.5%. Rate of ^{238}Np production in the blanket of a hybrid thermonuclear reactor designed for ^{239}Pu production amounts to approximately 460 kg ^{237}Np per year. Volume-average content of ^{237}Np in spent fuel constitutes approximately 1.1 kg ^{237}Np per 1t fuel at a run Tsub(k)=2.65 year. So, using in the hard spectrum of the hybrid thermonuclear reactor blanket depleted or natural uranium as a source material for ^{237}Np production will cause significant increase of the rate of ^{239}Pu commercial production.

19336 **(NRL-MR—4983) Nonuniformities in laser-ablated plasma.** Herbst, M.J.; Stamper, J.A.; Lehmberg, R.H.; Whitlock, R.R.; Young, F.C.; Grun, J.; Ripin, B.H. (Naval Research Lab., Washington, DC (USA); Mission Research Corp., Alexandria, VA (USA)). 30 Dec 1982. Contract AI08-79DP40092. 13p. (CONF-810576—5). NTIS, PC A02/MF A01. Order Number DE83005538.

From Topical conference on symmetry aspects of inertial fusion implosions; Washington, DC, USA (27 May 1981).

With long pulse-duration (4 nsec), moderate intensity ($\approx 10^{13}$ W/cm^2) Nd-laser illumination of planar targets, evidence is found in images of x-ray, 3/2 ω_0 and 2 ω_0 emission for filamentation of the incident beam. Calculations indicate that this may be due to thermal self-focusing of hot spots in the laser. X-ray images show spots and spicules, jets of material flow which appear to follow the fluid flow from the target. These may be attributed to the presence of microscopic impurities on our laser-irradiated foil targets.

19337 **(ORNL/TM—7898) Constrained ripple optimization of Tokamak bundle divertors.** Hively, L.M.; Rome, J.A.; Lynch, V.E.; Lyon, J.F.; Fowler, R.H.; Peng, Y-K.M.; Dory, R.A. (Oak Ridge National Lab., TN (USA)). Feb 1983. Contract W-7405-ENG-26. 58p. NTIS, PC A04/MF A01. Order Number DE83006363.

Magnetic field ripple from a tokamak bundle divertor is localized to a small toroidal sector and must be treated differently from the usual (distributed) toroidal field (TF) coil ripple. Generally, in a tokamak with an unoptimized divertor design, all of the banana-trapped fast ions are quickly lost due to banana drift diffusion or to trapping between the 1/R variation in absolute value vector B Ξ B and local field maxima due to the divertor. A computer code has been written to optimize automatically on-axis ripple subject to these constraints, while varying up to nine design parameters. Optimum configurations have low on-axis ripple (<0.2%) so that, now, most banana-trapped fast ions are confined. Only those ions with banana tips near the outside region (absolute value $\theta <$ or equal to 45°) are lost. However, because finite-sized TF coils have not been used in this study, the flux bundle is not expanded.

19338 **(PNL—10331) Theory of pulsed-irradiation microstructures.** Simonen, E.P. (Pacific Northwest Lab., Richland, WA (USA)). Oct 1982. Contract AC06-76RL01830. 19p. (CONF-821049—12). NTIS, PC A02/MF A01. Order Number DE83006200.

From TMS/AIME fall meeting; St. Louis, MO, USA (24 Oct 1982).

Flux pulsing is predicted to influence microstructures because of pulse annealing and on point defect annealing. Specifically void annealing and vacancy annealing are analyzed. A high dislocation density enhances the void annealing effect but inhibits the point defect annealing effect. Furthermore, pulsing effects are greater for higher damage rates and smaller defect aggregates. It is concluded that pulsed ion irradiations can simulate pulsed fusion irradiations if it is recognized that the ions exaggerate the expected neutron effect.

19339 **(PPPL—1965) Reduction of recycling by pumping at the PDX limiter.** Cecchi, J.L.; Knize, R.J.; Dylla, H.F.; Fonck, R.J.; Owens, D.K.; Sredniawski, J.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 19p. NTIS, PC A02/MF A01. Order Number DE83007247.

We have installed two arrays of Zr-Al getters adjacent to the PDX limiter to affect the pumping of neutrals formed in this

region. The projected area of the getters is approximately 0.4% of the plasma area, and the measured H_2 pumping speed is 16,000 l/ sec. During ohmic discharges, the getters reduced the electron density decay time from 340 to 180 msec. This result, combined with H/sub α'/ data indicates that the recycling coefficient decreases by 10% or more.

19340 **(PPPL—1975) Current state of magnetic-fusion energy research.** Johnson, J.L.; Weimer, K.E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 28p. NTIS, PC A03/MF A01. Order Number DE83007243.

With the improved understanding of plasma physics, progress is being made on several approaches to magnetic confinement for controlled thermonuclear fusion.

19341 **(UCID—19590) Switching transients in the MFTF yin-yang coils.** Owen, E.W.; Shimer, D.W. (Lawrence Livermore National Lab., CA (USA)). 2 Nov 1982. Contract W-7405-ENG-48. 94p. NTIS, PC A05/MF A01. Order Number DE83007380.

This report is a study of the transients caused by the fast dump of large superconducting coils. Theoretical analysis, computer simulation, and actual measurements are used. Theoretical analysis can only be applied to the simplest of models. In the computer simulations two models are used, one in which the coil is divided into ten segments and another in which a single coil is employed. The circuit breaker that interrupts the current to the power supply, causing a fast dump, is represented by a time and current dependent conductance. Actual measurements are limited to measurements made incidental to the coils' performance tests.

19342 **(UCRL—50025-82-3) Electronics Engineering Department quarterly report No. 3, 1982.** (Lawrence Livermore National Lab., CA (USA)). 1 Oct 1982. Contract W-7405-ENG-48. 31p. NTIS, PC A03/MF A01. Order Number DE83005794.

Separate abstracts were prepared for each of the five included sections. (MOW)

19343 (UCRL—50025-82-3, pp 5-8) **Elimination of output current transients in the MFTF sustaining neutral-beam arc power supplies.** 1 Oct 1982. NTIS, PC A03/MF A01.

In Electronics Engineering Department quarterly report No. 3, 1982.

Each neutral-beam arc power supply set is capable of pulses of up to 30 s duration at a 10% duty cycle. Initial tests revealed serious output current transient problems. The transient resulted in output current fluctuations in excess of 25% when the fluctuations should be less than 4% peak-to-peak into an arc chamber load. Tests showed that the fluctuation was due to an ineffective step-start arrangement. The solution to the problem was an output switch in the dc side of the system to delay connection of the load until the step-start function was completed.

19344 (UCRL—50025-82-3, pp 9-12) **Tools and methods for implementing the control systems on the Mirror Fusion Test Facility.** 1 Oct 1982. NTIS, PC A03/MF A01.

In Electronics Engineering Department quarterly report No. 3, 1982.

Our group has undertaken a uniform approach to implementing the control systems for the MFTF hardware subsystems. This approach has two major aspects: (1) to provide a stand-alone computer control system with a remote, portable terminal so that control can be provided at the site of the hardware for initial testing, (2) to provide hardware simulators so that the complicated MFTF computer control system can be tested independent of the hardware. We describe the software and hardware that were developed to carry out this plan and relate our experiences with bringing up several MFTF subsystems.

19345 (UCRL—50025-82-3, pp 13-17) **Low-level signal data acquisition for the MFTF superconducting magnet.** 1 Oct 1982. NTIS, PC A03/MF A01.

In Electronics Engineering Department quarterly report No. 3, 1982.

Computer control of the cooldown, initial energizing, and actual operation of the MFTF superconducting magnet depends on signals coming from the magnet's data acquisition system. This system for the magnet consists of sensors, signal conditioners, and multiplexers. Sensors were selected on the basis of their relative immunity to high magnetic fields, temperature extremes, and neutron radiation. Most of the sensors in the magnet instrumentation system required some type of signal conditioning.

19346 **(UCRL—87230) High-power pulsed lasers used in fusion research.** Hunt, J.T. (Lawrence Livermore National Lab., CA (USA)). 1982. Contract W-7405-ENG-48. 14p. (CONF-820528—7). NTIS, PC A02/MF A01. Order Number DE83006611.

From US/Japan seminar on theory and application of multiple ionized plasmas produced by laser and particle beams; Nara, Japan (2 May 1982).

This paper gives an overview of the Nd:glass laser target irradiation facilities constructed and operated for fusion research at the Lawrence Livermore National Laboratory. These type of facilities, both at LLNL and elsewhere in the world, have resulted in an extremely useful tool for studying many of the plasma physics processes involved in inertial confinement fusion.

19347 **(UCRL—88313) Studying electron distributions using the time-resolved free-bound spectra from coronal plasmas.** Matthews, D.L.; Kauffman, R.L.; Kilkenny, J.D.; Lee, R.W. (Lawrence Livermore National Lab., CA (USA); Imperial Coll. of Science and Technology, London (UK)). Nov 1982. Contract W-7405-ENG-48. 25p. (CONF-821128—4). NTIS, PC A02/MF A01. Order Number DE83006569.

From 24. American Physical Society annual meeting; New Orleans, LA, USA (1 Nov 1982).

Absorption of laser light in a plasma by inverse bremsstrahlung, I.B., can lead to a non-Maxwellian velocity distribution provided the electron-elecron collision frequency is too low to equilibrate the velocity distribution in the coronal plasma region of a laser heated aluminum disk by measuring the radiation recombination continuum. The experiments are performed using λ/sub L/ = 0.532 μm laser light at intensities of $\sim 10^{16}$ W/cm^2. Such parameters are predicted to produce conditions suitable for a non-thermal electron distribution. The shape of the K-shell recombination radiation has been measured using a time-resolved x-ray spectrograph. The electron distribution can be determined from deconvolution of the recombination continuum shape.

19348 **Design considerations of the HYLIFE nozzle plate.** Pitts, J.H. (California Univ., Livermore (USA). Lawrence Livermore National Lab.); Ojalvo, I.U. (Perkin-Elmer, Danbury, CT (USA)). *Res Mechanica;* **5**: No. 3, 231-236(Nov 1982).

The HYLIFE reaction chamber for generating power with inertial confinement fusion utilises a 5 m radius nozzle plate to establish a liquid metal jet array. The approximately rectangular cross-section of the jets can be maintained, without breakup into droplets, throughout the reaction chamber. An approximate model approach to a full standard structural dynamic analysis shows that peak dynamic stresses are about 10 MPa. Acceptable static stresses of 60 MPa can be obtained with a nozzle plate thickness of 0.5 m. Fatigue crack growth considerations at these stress levels show that 20 mm initial crack length flaws are allowable. This size of flaw can be easily detected by ultrasonic techniques, indicating an adequate conceptual design.

19349 **Modular low-aspect-ratio high-beta torsatron.** Sheffield, G.V. US Patent Application 6-364,276. 1 Apr 1982. 30p. Contract AC02-76CH03073.

A fusion-reactor device is described which the toroidal magnetic field and at least a portion of the poloidal magnetic field are provided by a single set of modular coils. The coils are arranged on the surface of a low-aspect-ratio toroid in planed having the cylindrical coordinate relationship phi = phi/sub i/ + kz, where k is a constant equal to each coil's pitch and phi/sub i/ is the toroidal angle at which the i'th coil intersects the z = o plane. The toroid

defined by the modular coils preferably has a race track minor cross section. When vertical field coils and, preferably, a toroidal plasma current are provided for magnetic-field-surface closure within the toroid, a vacuum magnetic field of racetrack-shaped minor cross section with improved stability and beta valves is obtained.

19350 **Raman accumulator as a fusion laser driver.** George, E.V.; Swingle, J.C. US Patent Application 6-363,971. 31 Mar 1982. 31p. Contract W-7405-ENG-48.

Apparatus for simultaneous laser pulse amplification and compression, using multiple pass Raman scattering in one Raman cell and pulse switchout from the optical cavity through use of a dichroic device associated with the Raman cell.

19351 **X-ray radiation from tokamaks.** Bitter, M.; von-Goeler, S.; Brau, K.; Eames, D.; Goldman, M.; Hill, K.; Sauthoff, N.; Silver, E.; Stodiek, W. (Princeton Univ., NJ). pp 861-870 of Inner-shell and x-ray physics of atoms and solids. Fabian, D.J.; Kleinpoppen, H.; Watson, L.M. New York, NY; Plenum (1981).

From International conference on x-ray processes and inner-shell ionization; Stirling, UK (25 Aug 1980).

Tokamak discharges emit soft x-rays in a 1 to 20 KeV range, consisting of bremsstrahlung and recombination continuum, with line spectra for impurities from plasma limiter and the walls of the vacuum vessel. Measurements of electron and ion temperature, investigations of ionization equilibrium and particle transport, and study of magnetohydrodynamic fluctuations and interruptions, were accomplished.

19352 **Plasma fluctuations and confinement of fusion reaction products.** Coppi, B.; Pegoraro, F. (Massachusetts Inst. of Tech., Cambridge). *Annals of Physics (New York);* **134**: 376-410(1981).

The interaction between the fluctuations that can be excited in a magnetically confined plasma and the high-energy-particle population produced by fusion reactions is analyzed in view of its relevance to the process of thermonuclear ignition. The spectrum of the perturbations that, in the absence of fusion reaction products, would be described by the incompressible ideal magnetohydrodynamic approximation is studied considering finite value of the plasma pressure relative ot the magnetic pressure. The combined effects of the magnetic field curvature and shear are taken into account and the relevant spectrum is shown to consist of a continuous portion, that could be identified as a mixture of shear-Alfven and interchange oscillations, and a discrete unstable part corresponding to the so-called ballooning modes. The rate of diffusion of the fusion reaction products induced by oscillations in the continuous part of the spectrum, as estimated from the appropriate quasi-linear theory, is found to be significantly smaller than could be expected if normal modes (i.e., nonconvective solutions) were excited. However, a relatively wide intermediate region is identified where opalescent fluctuations, capable of achieving significant amplitudes and corresponding to a quasi-discrete spectrum, can be excited.

99 GENERAL AND MISCELLANEOUS

19353 **(AERE-Bib—200) List of unclassified documents by the staff of Metallurgy Division, AERE Harwell from January 1979 to July 1980.** Smith, N.C. (UKAEA Atomic Energy Research Establishment, Harwell. Metallurgy Div.). Dec 1980. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700179.

This list constitutes unclassified material published or presented between January 1979 and July 1980, by the staff of Metallurgy Division. It covers reports, memoranda, articles in periodicals, conference papers, books and patent specifications.

19354 **(RISO-M—2347) List of selected publications 1981. Risoe National Laboratory.** (Risoe National Lab., Roskilde (Denmark)). Jul 1982. 25p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700180.

The list comprises a selection of scientific and technical publications of Risoe National Laboratory and its staff during 1981. Journal articles, conference papers, and reports are included. The publications are arranged in the following broad subject categories: Energy Supply, Environmental and Safety Reseach, Materials Research, Biotechnology and Radiation Research,Experimental Methods and Analyses, Major Research Facilities, General.

19355 **Inferred referendum: a rule for committee decisions.** Wolsky, A.M.; Sanathanan, L. (Argonne National Lab., IL). *Theory and Decision;* **14**: 75-88(1982).

A new method of social choice is presented. The result of the method coincides with that of majority voting when it does not produce an intransitivity among the alternatives under consideration. When majority voting would produce an intransitivity, the method orders the alternatives in the same way as the transitive constituency would whom the committee members are most likely to represent. Analysis of the application of the method to three alternatives shows that (a) the resulting order depends only on the committee members' votes between pairs of alternatives (b) the resulting order is less in conflict with Sen's Property α than the orders provided by other schemes (c) when majority voting provides an intransitivity, the hypothesis that, in fact, the committee's constituency is as we assume it to be in almost as likely as the hypothesis that it precisely mirrors the committee.

19356 **(GAO/EMD—82-113) Department of Energy's procurement information system: expectations have not been realized.** (General Accounting Office, Washington, DC (USA). Office of the Comptroller General). 3 Sep 1982. 28p. US General Accounting Office, P.O. Box 6015, Gaithersburg, MD 20760.

Report to the Chairman, Committee on Energy and Commerce House of Representatives.

The Department of Energy's procurement information system (IPMIS), designed to track procurement actions through all contract phases, will cost at least 3-1/2 times the original estimates without fully realizing the expected benefits; has not been, and may never be, effective; and has been modified to eliminate the system's ability to track procurement planning data. The problems DOE encountered with IPMIS can be traced to the fact that DOE did not follow normally accepted procedures for developing a management information system. Rather, it often made arbitrary decisions and rushed certain phases of IPMIS' development. GAO recommends actions to help make IPMIS - now called the Procurement and Assistance Data System (PADS) - an effective and efficient procurement information system. The Department of Energy should follow accepted procedures in developing any future management information system.

19357 **(LALP—82-36) Los Alamos National Laboratory Institutional Plan, FY 1983-FY 1988.** (Los Alamos National Lab., NM (USA)). Dec 1982. Contract W-7405-ENG-36. 134p. NTIS, PC A07/MF A01. Order Number DE83007096.

The report is broken down into the following sections: director's overview; laboratory role and mission; description of the laboratory; scientific and technical activities; technology transfer program; personnel resources; university and industry interactions; site and facilities development; and resource projections and analyses. 19358 **(AD-A—119468/7) Radiation from high temperature plasmas. Phase II. Final report 15 Jul 81-14 Jul 82.** Agritellis, C. (Science Applications, Inc., McLean, VA (USA)). Aug 1982. 35p. NTIS, PC A03/MF A01.

A large number of atomic physics and magnetohydrodynamic computer codes have been developed by members of the NRL Plasma Radiation Branch of the Naval Research Laboratory over several years. These codes involve the simulation of complex physical processes in a variety of plasma radiation research investigations. In this research effort, the structure of many of these codes was analyzed to improve the numerical procedures or to speed calculational time by code vectorization. In addition, graphic techniques were developed to improve the display of the results, which is important both to detect coding errors and to elucidate physical mechanisms. In this report, we describe the codes that were improved and present examples of the graphical displays now available for analysis of the calculational results.

19359 (ANL/MCS-TM—2) Recent developments in algorithms and software for trust-region methods. More, J.J. (Argonne National Lab., IL (USA)). Oct 1982. Contract W-31-109-ENG-38. 38p. NTIS, PC A03/MF A01; 1. Order Number DE83006276.

Portions are illegible in microfiche products.

Trust-region methods are an important class of iterative methods for the solution of nonlinear optimization problems. Algorithms in this class have been proposed for the solution of systems of nonlinear equations, nonlinear estimation problems, unconstrained and constrained optimization, nondifferentiable optimization, and large-scale optimization. Interest in trust-region methods derives, in part, from the availability of strong-convergence results and from the development of software for these methods which is reliable, efficient, and amazingly free of ad-hoc decisions. In this paper we survey the theoretical and practical results available for trust-region methods and discuss the relevance of these results to the implementation of trust-region methods.

19360 (CNEN-RT/EDP—(80)4) Automated classification with related statistics. Biasini, L.; Fucci, C.; Pelliconi, A. (Comitato Nazionale per l'Energia Nucleare, Bologna (Italy). Direzione Centrale Controllo della Gestione e dei Programmi). Sep 1980. 30p. (In Italian). NTIS (US Sales Only), PC A03; 3.

Paper copy only, copy does not permit microfiche production.

A numerical classification problem concerning the vegetable associations in a region is presented. Hierarchical strategies employed, numerical results and related dendrograms are presented and analysed.

19361 (CNEN-RT/ING—(81)8) Computer program MIGEL and its uses. Massini, G. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy). Direzione Centrale per la Sicurezza Nucleare e la Protezione Sanitaria). 1981. 150p. (In Italian). NTIS (US Sales Only), PC A07; 3. Order Number DE82902979.

Paper copy only, copy does not permit microfiche production.

This report describes how to use MIGEL, an automatic mesh generation program for arbitrary tridimensional structures, that is able to combine elements of the Bersafe System with 15 and 20 nodes. It can also generate meshes using elements with either 8, 15, 20 or 32 nodes.

19362 (CONF-820768—1) Thoughts on the evolution of dynamic graphics. Tukey, J.W. (Princeton Univ., NJ (USA); Bell Labs., Murray Hill, NJ (USA)). 1982. Contract AC02-81ER10841. 11p. NTIS, PC A02/MF A01. Order Number DE83006146.

From Stanford workshop on advanced statistical graphics; Stanford, CA, USA (26 Jul 1982).

One can look at evolution in two quite different ways: in terms of changes and developments, or in terms of the challenges to be met and the opportunities to be seized. We follow the second path, which focuses on limitations and opportunities. We can conveniently approach these under 7 headings, namely: hardware availability; software environment; imagination about actions; imagination about display; imagination about support algorithms; imagination about system structure (specifically stash and control); and users (and uses) are different. We take these up in turn.

19363 (CONF-820984—2) Methodology for view integration in logical database design. Navathe, S.B.; Gadqil, S.G. (Florida Univ., Gainesville (USA). Database Systems Research and Development Center; Metropolitan Life, New York (USA). Corporate System Planning). 1982. Contract AS05-81ER10977. 23p. NTIS, PC A02/MF A01; 1. Order Number DE83005754.

From Very large data base conference; Mexico City, Mexico (8 Sep 1982).

Portions are illegible in microfiche products.

This paper is based on a conceptual framework for the design of databases consisting of view modeling, view integration, schema analysis and mapping and physical design and optimization. View modeling involves the modeling of the user views using a conceptual/semantic data model; the view integration phase merges user views into a global model which is then mapped to an existing database environment and subsequently optimized. Here we use the data model proposed by Navathe and Schkolnick to model user views and develop a methodology for view integration. View integration issues are examined in detail; operations for merging views are defined and an approach to automating the view integration process is described. The proposed approach is being partially implemented at the University of Florida.

19364 (CONF-820984—3) Parallel algorithms and their implementation in MICRONET. Su, S.Y.W.; Mikkilineni, K.P. (Florida Univ., Gainesville (USA). Database Systems Research and Development Center). 1982. Contract AS05-81ER10977. 15p. NTIS, PC A02/MF A01. Order Number DE83006511.

From Very large data base conference; Mexico City, Mexico (8 Sep 1982).

This paper describes a simple microcomputer network system and its architectural support for four categories of database operations. The design and implementation of hardware and software and the parallel algorithms for the database operations are described and illustrated. Three new algorithms, one for finding maximum/minimum, and two for sorting distributed files, are presented together with their implementations in MICRONET. The results of the analyses of the new sorting algorithms and a comparison with other sorting algorithms are also given. The system is characterized by its simplicity in network connection and communication, flexibility in expanding or contracting the size of the network, reliability achieved by interchangeable hardware and software, and high performance achieved by one-to-all broadcasting, hardware scheduling, and special control lines for inter-processor communication and synchronization.

19365 (CONF-820986—Summ.) AESOP local area networks: summary of proceedings. (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Computer Services and Telecommunications Management). 1982. 407p. NTIS (US Sales Only); 2. Order Number DE83005709.

From AESOP local area network conference; Springfield, VA, USA (29 Sep 1982).

Microfiche only, copy does not permit paper copy reproduction. Original copy available until stock is exhausted.

The Association for Energy Systems, Operations, and Programming (AESOP) held its first topical conference on September 29-30, 1982. The theme of the conference was Local Area Networks. A tutorial overview of local area networks, presented in Session I, covered the motivation, applications, and requirements for using local area networks. Session II consisted of briefings from vendors who market various products in support of local area networks. The status and the future direction of baseband, broadhand, and other technologies were discussed. An overview of local area network experiences and plans was the focus of Session III. Industry and Department of Energy local area networks were explained. The vugraphs from each of the talks are reproduced in this summary.

19366 (DEMO—81/10) Standard real numbers. Ponticopoulos, L. (Democritus Nuclear Research Center, Athens (Greece)). Nov 1981. 23p. NTIS (US Sales Only), PC A02/MF A01; 1. Order Number DE82902464.

Portions are illegible in microfiche products.

Our purpose is to introduce a process generating the mass production of certain binary operations by means of a list of mathematical objects, given in advance, and a definition procedure consisting of a finite number of steps.

19367 **(DOE/EIA—0279) OMNI user guide for the Energy Information Administration.** (Linear Programming, Inc., Silver Spring, MD (USA)). Dec 1980. 196p. NTIS, PC A09/MF A01; 1. Order Number DE83006455.

Portions are illegible in microfiche products.

This manual introduces the reader to Linear Programming (LP) and the use of OMNI to formulate, manipulate and report on LP models and their associated data bases. OMNI is a proprietary computer language developed by Haverly Systems, Inc. The manual is intended to serve as a supplement to the OMNI reference manual. It can be used either as a text for an OMNI training course, or can be read independently. Since the manual was written especially for a DOE audience, the sample problems shown are representative of EIA (Energy Information Administration) models.

19368 **(DOE/ER/01195—476) Illinois I/O Register to FASTBUS Interface.** Downing, R.; Lesny, D.; Whitten, W. (Illinois Univ., Urbana (USA). Dept. of Physics). Jan 1983. Contract AC02-76ER01195. 6p. (COO—1195-476). NTIS, PC A02/MF A01. Order Number DE83007330.

The I/O Register to FASTBUS Interface (IORFI) is connected to a processor via two 16-bit output registers (OR1,OR2) and two 16-bit output resisters (IR1,IR2). One of the output registers (OR1) is used to specify the interface function which is to be performed when the interface is accessed via the Data-in Register (IR2) or the Data-out Register (OR2). The other input register (IR1) is used to read the direct status of the FASTBUS lines independent of OR1. The changes made to the SLAC design at the University of Illinois are described.

19369 **(DOE/ER/10841—4) Interactive graphical data analysis. Annual progress report, March 25, 1982-March 24, 1983.** Bloomfield, P.; Tukey, J.W. (Princeton Univ., NJ (USA)). Nov 1982. Contract AC02-81ER10841. 8p. NTIS, PC A02/MF A01. Order Number DE83006518.

Work on selecting two-dimensional projections of high-dimensional point-clouds has continued. The focus has been on evaluating the degree of interest of a power two-dimensional projection using non-parametric density estimates. A philosophy for data-modification display systems, focused on PRIM-81, has been developed. A class of techniques for curve-isolation in the presence of a noise background have been considered. The use of simple functions in fitting non-linear behavior has to be expanded and improved.

19370 **(DOE/ER/10977—1) Logical and physical modeling and design of scientific and statistical databases for energy research. Progress report.** Su, S.Y.W.; Navathe, S.B.; Batory, D.S. (Florida Univ., Gainesville (USA). Database Systems Research and Development Center). 1983. Contract AS05-81ER10977. 44p. NTIS, PC A03/MF A01; 1. Order Number DE83006526.

Portions are illegible in microfiche products.

Research is summarized in three areas: semantic modeling and language design; data base mapping and integration; and physical design. (GHT)

19371 **(DOE/ER/10977—T1) Model of transactions on physical databases.** Batory, D.S. (Florida Univ., Gainesville (USA). Database Systems Research and Development Center). [nd]. Contract AS05-81ER10977. 47p. NTIS, PC A03/MF A01. Order Number DE83006544.

A generalized approach to modeling transactions on physical databases is proposed. A notation for specifying transactions is introduced and rules for translating a transaction's specification into functions that estimate transaction performance are developed. This approach provides a collection of tools which can be used to simplify and extend earlier work on query processing and physical database design. Applications of the tools to the modeling of transactions on logical databases are also demonstrated.

19372 **(DOE/ER/10977—T2) Index encoding: a compression technique for large statistical databases.** Batory, D.S. (Florida Univ., Gainesville (USA). Database Systems Research and Development Center). 1982. Contract AS05-81ER10977. 34p. NTIS, PC A03/MF A01. Order Number DE83006431.

Index encoding is a compression technique which involves the substitution of numeric codes for data values. Current methods of index encoding are suited only for attributes whose domains are enumerable and static. In this paper, generalizations of these methods to encode dynamic domains are proposed and analyzed. The practicality of the generalizations is examined in both theoretical and experimental studies.

19373 **(DOE/ER/10977—T3) SAM: a semantic association model for corporate and scientific/statistical databases.** Su, S.Y.W. (Florida Univ., Gainesville (USA). Database Systems Research and Development Center). Dec 1982. Contract AS05-81ER10977. 75p. NTIS, PC A04/MF A01. Order Number DE83006510.

This paper describes a semantic association model called SAM which is designed for modeling not only scientific/statistical databases but also business oriented databases. The model uses concepts and associations of these concepts to model the real world information of a database management environment. Seven general association types are defined and distinguished based on their structural properties, operational characteristics and semantic constraints. They are the basic constructs for an explicit and direct modeling of complex semantic relationships in databases. The model is characterized by (1) its expressive power offered by the seven modeling constructs and the recursive use and nested structuring of these constructs, (2) its recognition of complex data types such as text, ordered set, matrix, time series, vector, set and time as primitive data types which can be directly manipulated by the user using a DML, (3) its support of principle of relativism by allowing concepts to be multiply labeled to explicitly specify the conflicting views of these concepts, and (4) the distinction it makes on attributes which characterize objects and attributes which statistically summarize a set of objects, and its support of statistical operations. A network structure and a tabular structure called generalized-relation or G-relation are proposed for representing the conceptual and implementation designs of databases respectively. A number of restructuring operations and algebraic operations are also defined for processing G-relations.

19374 **(HMI-B—363) Graphical metafile Bilderbuch (picture book).** Esloff, P.; Eckert, K.P.; Enslert, M.; Foest, G.; Scheller, A. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)). Sep 1981. 24p. (In German). NTIS (US Sales Only), PC A02/MF A01; 1. Order Number DE82904701.

Portions are illegible in microfiche products.

This report contains the specification of the graphical metafile Bilderbuch (picture book) which is the kernel of the graphical system GRAFIX; in this metafile two dimensional graphical information can be stored. This metafile is a part of the computer network HMINET II and can be transferred within it; it is possible to interpret the metafile for various graphical devices.

19375 **(IAE—3398/16) Method for synthesis of programs for a subgroup of problems of solution choice.** Zhuk, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 55p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83700172.

The heuristic method for automatic synthesis of programs is proposed for description of problems pertaining to a subgroup of problems of solution choice characterized by the choice and realization of a certain subset of "operations" from the designated set of "operations" on the results of checking a certain set of "conditions". One or several "operations" corresponds to the realization of each "condition" and one "condition" or disjunction of "conditions" corresponds to each "operation". The problems of this subgroup are used, for example, for identification of events in nuclear physical experiments. Besides, the problem of "conditions" calcula-

tion in decision tables processing by the "mask" method belongs to this subgroup. The synthesis of programs is performed to minimize the time of program operation using minimum memory for its realization taking into account the mutually exclusive dependences between the "conditions", probability and outcomes and time of checking "conditions" as well as time of realization of "operations".

19376 (KFKI—1980-44) Single exponential fitting of pulse excited decay curves distorted by an instrument function. Szoeke, J.; Lang, E. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). 1980. 52p. (In Hungarian). NTIS (US Sales Only), PC A04/MF A01; 3. Order Number DE82902597.

Paper copy only, copy does not permit microfiche production.

Single exponential fitting of pulse excited decay curves distorted by an instrument function has been investigated by three different iterational methods. The starting value of tau (decay time) is assessed by moment-method. At the one-sided iteration (DEC-IT-ONE) try-tau is successively decreased under RMS control, coming near to the real decay time. The two-sided iteration (DEC-IT-TWO) uses three pairs of tau-s and RMS-s. The next try-tau is determined by the method of RMS weighted average. The least RMS (-tau pair) is always the middle value. DEC-IT-2ND uses also three pairs of tau-s and RMS-s and RMS-s to the second order polynomial fitting. The precision of the decay time determination with DEC-IT-ONE and DEC-IT-TWO is about 0.1 percent and with DEC-IT-2ND is about 1 per cent. The required iteration numbers are: DEC-IT-ONE 15-20; DEC-IT-TWO 8-12; DEC-IT-2ND 5-8. For the calculation of the convolution integral the GRINWALD-STEINBERG approximating recursion formula is recommended because the special precise integration procedure (SIMPSON-SPECIAL) described here is very time consuming.

19377 (LA—9477-MS) ACON: a multipurpose production controller for plasma physics codes. Snell, C. (Los Alamos National Lab., NM (USA)). Jan 1983. Contract W-7405-ENG-36. 44p. NTIS, PC A03/MF A01. Order Number DE83007122.

ACON is a BCON controller designed to run large production codes on the CTSS Cray-1 or the LTSS 7600 computers. ACON can also be operated interactively, with input from the user's terminal. The controller can run one code or a sequence of up to ten codes during the same job. Options are available to get and save Mass storage files, to perform Historian file updating operations, to compile and load source files, and to send out print and film files. Special features include ability to retry after Mass failures, backup options for saving files, startup messages for the various codes, and ability to reserve specified amounts of computer time after successive code runs. ACON's flexibility and power make it useful for running a number of different production codes.

19378 (NUREG/CR—3115) Expert opinion and ranking methods. Uppuluri, V.R.R. (Oak Ridge National Lab., TN (USA)). Mar 1983. Contract W-7405-ENG-26. 23p. (ORNL/CSD/TM—201). NTIS, PC A02/MF A01 - GPO. Order Number DE83007160.

Portions are illegible in microfiche products.

Suppose we have k objects and wish to rank them according to a characteristic. A judge compares these objects two at a time and indicates whether one object is better or worse or equal to another object. We analyze this data by log least squares procedure and the λ/sub max/ procedure suggested by Saaty. We show by examples, how one can incorporate the data from several judges to obtain a ranking of the objects. Finally, we consider the case when a judge compares the objects two at a time and indicates the probability that one object is better than oanother object, and show how one can get a ranking of the objects.

19379 (ORNL/CSD/TM—168) Oak Ridge National Laboratory filtering and smoothing programs. Pike, D.H.; Morrison, G.W.; Horwedel, B.M. (Oak Ridge National Lab., TN (USA)). Mar 1982. Contract W-7405-ENG-26. 184p. NTIS, PC A09/MF A01; 1. Order Number DE82009035.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report contains documentation for various filtering and smoothing programs which have been developed. The programs documented include: (1) A Kalman Filter and Linear Smoother Algorithm designed for use on batch processing computer systems. (2) A Square-Root algorithm which produces the same output as the Kalman Filter and Linear Smoother but uses a different algorithm. This program is designed for batch processing systems. (3) A Kalman Filter and Linear Smoother algorithm designed for use on minicomputers and/or real-time systems.

19380 (ORNL/CSD/TM—200) Assessment of Fisher and logistic linear and quadratic discrimination models. Bayne, C.K.; Beauchamp, J.J.; Kane, V.E.; McCabe, G.P. (Oak Ridge National Lab., TN (USA)). Feb 1983. Contract W-7405-ENG-26. 66p. NTIS, PC A04/MF A01. Order Number DE83007170.

This paper summarizes the results from a simulation study comparing the performance of the Fisher and logistic linear and quadratic discriminant functions. Three types of bivariate distributions are studied. Each classification rule is compared to the optimal maximum likelihood procedure for the different data types. The theoretical misclassification probabilities of the sample discriminant functions are calculated directly and used for the comparison of the different procedures both in terms of bias and variation. Generalizations and recommendations are made to assist the applied statistician in making the correct choice of a discrimination procedure and the results of this study are compared with earlier investigations. This study shows that specification of the form of the discriminant function may be one of the most important parts of a discriminant analysis.

19381 (ORNL/TM—7844) Modification of the Purdue University physical properties package (PPROP) to allow the handling of streams containing solids. Johnson, P.J.; Salmon, R.; Lister, D.M.; Gardner, J.A. (Oak Ridge National Lab., TN (USA)). Mar 1982. Contract W-7405-ENG-26. 86p. NTIS, PC A05/MF A01; 1. Order Number DE82008712.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Purdue computerized physical properties package (PPROP) has been modified by Oak Ridge National Laboratory to allow the handling of streams containing solids. This final report describes the revisions made, including new subroutines, new data files, and preparation of input data. Numerous examples are presented and discussed.

19382 (RFP—3352) Comparison of estimators of beta parameters for fitting binomial data with varying p. Jones, B.A.; Kerr, B.S. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). 1982. Contract AC04-76DP03533. 10p. (CONF-820878—5). NTIS, PC A02/MF A01. Order Number DE83006641.

From Institute of mathematics and statistics annual meeting; Cincinnati, OH, USA (16 Aug 1982).

The four estimators compared here have advantages peculiar to each. The method of moments estimator is easily computed, and it is conceptually easy to understand the derivation. When the analysis is to be done on a calculator, these are the recommended estimators. When more computing power is available, the least square estimators are recommended. By definition, they are the best according to the minimum sum of squares criterion. If minimum sum of squares is not the most appropriate criterion because the area needing best fit has small expected frequency, then minimum Chi-squared estimators are best.

19383 (SAND—82-2517) Global-error estimation for stiff ODEs. Shampine, L.F. (Sandia National Labs., Albuquerque, NM (USA)). Dec 1982. Contract AC04-76DP00789. 13p. NTIS, PC A02/MF A01. Order Number DE83006846.

Some years ago we devised a way to estimate the global error when solving stiff ODEs which is interesting because it is very simple and very cheap. Undoubtedly the most popular codes for the solution of stiff ODEs are based on the backward differentiation formulas (BDF). The scheme described applies to the BDF of orders 1 to 3 but not to orders 4 to 6. We explain a new treatment

of our approach to global error estimation. Prothero has given an approach to estimation of global error which is closely related to the way we now view our approach. We review his approach and contrast has assumptions with the ones we make and point out an important restriction. Finally, we draw upon an approximation made by Prothero to extend the applicability of the procedure, and in some cases to improve the accuracy of the procedure.

19384 **(SAND—82-2974) Adaptive line enhancement and sinusoidal burst detection.** Ahmed, N.; Vijayendra, S.; Fogler, R.J.; Elliott, G.R. (Kansas State Univ., Manhattan (USA). Dept. of Electrical Engineering; Sandia National Labs., Albuquerque, NM (USA)). Dec 1982. Contract AC04-76DP00789. 14p. NTIS, PC A02/MF A01; 1. Order Number DE83006389.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This paper concerns an adaptive short-term correlator (ASC) algorithm. Three possible applications are discussed. Two of these are line enhancement and sinusoidal-burst detection, as indicated in the title. Some results related to a third application, source detection, are also included.

19385 **(SAND—83-0056) Asymptotic bounds on the errors of one-step methods.** Shampine, L.F. (Sandia National Labs., Albuquerque, NM (USA)). Feb 1983. Contract AC04-76DP00789. 10p. NTIS, PC A02/MF A01. Order Number DE83006924.

In this note we show how to construct bounds using any one-step method endowed with an asymptotically correct local error estimator. The extrapolation codes vary their order from step to step. Correspondingly, we allow the one-step method to be changed at every step. The task breaks into three parts. In the next section we show how to construct asymptotic bounds on the local error. The following section outlines a global convergence proof which accounts for variation of formula from step to step and for the fact that the construction itself employs one of two formulas at each step. Finally the full construction and its justification are given. In a last section it is emphasized that asymptotic bounds may not be useful for assessing the general size of the global errors.

19386 **(UCID—18075-Rev.1) HEMPDS user's manual.** Warren, K.H. (Lawrence Livermore National Lab., CA (USA)). Feb 1983. Contract W-7405-ENG-48. 70p. NTIS, PC A04/MF A01. Order Number DE83007406.

HEMPDS, the double-slide version of two-dimensional HEMP, allows the intersection of slide lines and slide lines in any direction, thus making use of triangular zones. this revised user's manual aids the physicist, computer scientist, and computer technician in using, maintaining, and coverting HEMPDS. Equations, EOS models, and sample problems are included.

19387 **(UCID—19588-Suppl.) Connecting your Apple to Octopus 7600's.** Barton, G.W. Jr. (Lawrence Livermore National Lab., CA (USA)). 17 Jan 1983. Contract W-7405-ENG-48. 13p. NTIS, PC A02/MF A01. Order Number DE83006670.

In UCID-19588, Communicating between the Apple and the Wang, we described how to take Apple DOS text files and send them to the Wang, and how to return Wang files to the Apple. It is also possible to use your Apple as an Octopus terminal, and to exchange files with Octopus 7600's. Presumably, you can also talk to the Crays, or any other part of the system. This connection has another virtue. It eliminates one of the terminals in your office.

19388 **(UCID—30192) STOP: a fast method of disjointing binary product sets.** Patenaude, C.J. (Lawrence Livermore National Lab., CA (USA)). 14 Jan 1983. Contract W-7405-ENG-48. 27p. NTIS, PC A03/MF A01. Order Number DE83007463.

The STOP program uses a fast method of disjointing a collection of binary product sets. There are a number of applications where this is useful. This manual concentrates on the uses of STOP in the exact computation of the performance of complex probabilistic systems. In general, STOP is applied to the disjointing of cut sets in the evaluation of the probabilistic performance of a system. It runs under the LTSS operating system on the CRAY-1 computers at LLNL. The evaluation of system performance from the performance of the components and their interconnections proceeds in two steps. First, a performance rejection region for the system is defined and the combinations of the component states that cause system rejection are determined. These are the cut sets of the system. Next, the probability of occurrence of at least one of these cut sets is computed from the probabilities associated with the components of the cut sets. Disjoint sets are desirable for an accurate and exact probability analysis. The STOP method represents a set-theoretic viewpoint where system success or failure is represented as a union of intersections of dependent events, and a disjoint representation for that union is sought. Although this representation is analagous to a sum of product form in a Boolean problem, the set-theoretic view provides considerably more insight into the structure of the computational problem, particularly since a holistic approach is taken where all cut sets are examined and transformed simultaneously using a divide and conquer approach to obtain the disjoint form.

19389 **(UCRL—53371) Protocol translation and translators for heterogeneous computer networks.** Ong, M.M. (Lawrence Livermore National Lab., CA (USA)). Mar 1982. Contract W-7405-ENG-48. 197p. NTIS, PC A09;MF A01; 1. Order Number DE83007379.

Portions are illegible in microfiche products. Original copy available until stock is exhausted. Thesis.

This dissertation describes a solution to the problem of interconnecting heterogeneous computers by means of protocol translation in a multi-network environment. Despite the effort of standards organizations to bring uniformity to the computer network industry, many different types of networks continue to be produced because of the demands for different network services. One solution for interconnecting the networks is protocol translation. Protocol translation is analyzed with the help of physical and mathematical models. Guided by the models, the very complex problem of general translation is simplified by identifying an internetwork standard. This standard was established by examining the operations and services of computer networks, and the result is six classes of data. According to the models, a translator is composed of two different emulators and a mapping function which operates on data from the six data classes. Some upper bonds concerning the sharing of resources in translation will also be diagrammatically represented.

19390 **(UCRL—88538) C^3 and combat simulation - a survey.** Erickson, S.A. Jr. (Lawrence Livermore National Lab., CA (USA)). 4 Jan 1983. Contract W-7405-ENG-48. 15p. (CONF-820767—1). NTIS, PC A02/MF A01. Order Number DE83006610.

From NATO conference on modeling and analysis of defense processes; Brussels, Belgium (27 Jul 1982).

This article looks at the overlap between C^3 and combat simulation, from the point of view of the developer of combat simulations and models. In this context, there are two different questions. The first is: How and to what extent should specific models of the C^3 processes be incorporated in simulations of combat. Here the key point is the assessment of impact. In which types or levels of combat does C^3 play a role sufficiently intricate and closely coupled with combat performance that it would significantly affect combat results. Conversely, when is C^3 a known factor or modifier which can be simply accommodated without a specific detailed model being made for it. The second question is the inverse one. In the development of future C^3 systems, what rule should combat simulation play. Obviously, simulation of the operation of the hardware, software and other parts of the C^3 system would be useful in its design and specification, but this is not combat simulation. When is it necessary to encase the C^3 simulation model in a combat model which has enough detail to be considered a simulation itself. How should this outer combat model be scoped out as to the components needed. In order to build a background for answering these questions a two-pronged approach will be taken. First a framework for C^3 modeling will be developed, in which the various types of modeling which can be done to include or encase C^3 in a combat model are organized. This framework will hopefully be useful in describing the particular assumptions made in specific models in terms of what could be done in a more general way. Then a few specific

models will be described, concentrating on the C^3 portion of the simulations, or what could be interpreted as the C^3 assumptions.

19391 **Program transformation and language design.** Boyle, J.M. (Argonne National Lab., IL). pp 285-295 of Relationship between numerical computation and programming languages. Reid, J.K. (ed.). Amsterdam, Netherlands; North-Holland Publishing Co. (1982). Contract W-31-109-ENG-38.

Program transformations are very useful in the development of mathematical software. They reduce the number of routines that must be written by hand, while at the same time making it possible to produce routines tailored to user requirements. During transformation, one program evolves into another in a sequence of small steps. They must be performed easily and correctly, and they must yield an efficient program when completed. Programs written in Fortran can be transformed, but ones written in an improved language could be transformed more easily. Among the needed language improvements are simplicity, extensibility, and access to hardware-level features.

19392 **Identity from classical invariant theory.** Stein, P.R. (Los Alamos National Lab., NM). *Linear and Multilinear Algebra;* **11**: 39-44(1982).

A simple derivation is given of a well-known relation involving the so-called Cayley Operator of classical invariant theory. The proof is induction-free and independent of Capelli's identity; it makes use only of a known-theorem in the theory of determinants and some elementary combinatorics.

19393 **Comments.** Mckay, M.D.; Beckman, R.J. (Los Alamos Scientific Lab, NM). *Communications in Statistics, (Part A), Theory and Methods;* **A9**: No. 17, 1859-1861(1980).

When studying the probability distribution of an output from a model, it is essential that one examine the effects of uncertainties in the distribution of inputs. When the price that must be paid for model runs is high, there is a tendency to perform studies with a simplified approximation model. The value of these approaches is highly questionable. In fact, these approaches can become a disservice without a quantification of the errors involved. The authors have presented a means whereby the sensitivity of the original model to distributional assumptions on the inputs can be studied with a limited number of computer runs. Unfortunately, the assumption under which their procedure will work as intended is that two similar distribution functions are really identical (or the model $Y = h(X)$ is constant).

From SAS Users Group international meeting; San Francisco, CA, USA (14 Feb 1982).

Portions are illegible in microfiche products.

In SEEDIS, the Socio-Economic Environmental Demographic Information System at Lawrence Berkeley Laboratory (LBL) some 70 geographic levels (e.g. 1970 or 1980 counties) are defined, corresponding to archived data files. If efficiency considerations are ignored, each file needs to be stored only at the most detailed level for which the data are complete. Geocode correspondence files provide the information required to transform data from any level to any other level. Inevitable, disaggregation requires ad hoc proportionality assumptions; different assumptions are suitable for different applications. In SEEDIS, unlike other systems, these assumptions are under the user's control. The SEEDIS geocode conversion files and proxy variable files can be used to aggregate and disaggregate arbitrary data files, either within or outside SEEDIS. Other files now being developed describe other dimensions of the data, for example industrial or occupational classification.

19395 **(SAND—83-0224C) Sandia National Laboratories Technical Library status report.** Kurtz, S. (Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 4p. (CONF-830207—2). NTIS, PC A02/MF A01; 1. Order Number DE83006481.

From DOBIS/LIBIS library system conference; Paris, France (17 Feb 1983).

Portions are illegible in microfiche products.

The Technical Library collection consists of the following types of materials: (1) 45,000 cataloged books, (2) 100,000 cataloged reports originating from Sandia and other private and governmental agencies which grows at the rate of approximately 6000 reports per year, (4) 1500 cataloged periodical subscriptions, (5) A 216,000-item central technical file composed of memos, correspondence, trip reports, minutes of meetings, test reports and similar documents originated by Sandia, which grows at the rate of about 3000 items per year, and (6) A 60,000-item document accountability file which serves to track the movement of classified documents from origination to destruction. Sandia's Technical Library has been automated since the 1960's using an in-house designed system. The automated system provided acquisitions, cataloging, circulation, Boolean searching and SDI services for the books collection using indexed-sequential files and batch updating. Various automated functions were provided for the other types of materials using sequential files with batch updating. In early 1981 the library began the process of acquiring a stand-alone computer. Library software packages were evaluated and DOBIS was selected as the software which was best able to meet our needs. As of January 1983 DOBIS acquisition and circulation functions are being used for the books file, cataloging for new reports was started and manual key-in begun on the borrower (about 7000 records) and funds files. The reports and CTF files on the Univac were written to tape until modifications of the conversion program have been done. Conversion of the periodicals records has been postponed until the periodicals functions release is available. In the meantime, manual records are being kept.

9904 Law

19396 **(GAO/RCED—83-28) Termination of the common support agreement.** (General Accounting Office, Washington, DC (USA). Energy and Minerals Div.). 10 Nov 1982. 15p. US General Accounting Office, P.O. Box 6015, Gaithersburg, MD 20760.

Efforts of the Federal Energy Regulatory Commission (FERC) to terminate the Common Support Agreement between FERC and the Department of Energy (DOE) were reviewed. This termination would transfer from DOE to FERC the responsibility for performing certain administrative functions in support of FERC. We found that FERCs estimates of the resources needed to perform the support functions were not based on a complete evaluation, and that FERC is not yet prepared for an orderly, economical transfer of the administrative support functions from DOE. We, therefore, believe that FERC needs to make complete evaluations of the resources it needs to assume responsibility for the functions and to prepare a transition plan for making the transfer. Correspondence between the two agencies establishing the need for terminating the agreement and various proposals to facilitate that efforts was examined. Documentation each agency had for its resources estimates and negotiating position was analyzed. This review was performed in accordance with generally accepted government audit standards.

9905 Civilian Defense

19397 **(AD-A—119701/1) Damage functions for upgraded shelters. Final report 15 Sep 80-20 Aug 81.** Longinow, A.; Wu, M.Y.; Mohammadi, J. (IIT Research Inst., Chicago, IL (USA)). Aug 1982. 251p. NTIS, PC A12/MF A01.

The probability of survival is predicted of people located in conventional, expediently upgraded basements when subjected to the blast effects produced by the detonation of a 1-MT weapon near the ground surface. Two categories of potential shelters are considered here, i.e., engineered buildings and single-family residences. The first category included 12 basements designed for live

loads in the range from 50 psf to 250 psf and slab spans from 12 ft to 20 ft. Each of these was analyzed as expediently upgraded using four different upgrading schemes. An expedient upgrading scheme involves strengthening the slab over the basement by providing intermediate supports and blocking off all openings into the basement. This resulted in 60 shelters of different strengths which include the conventional, unupgraded slabs as base cases. The second category included four conventional single-family dwellings with full basements. Each was evaluated when upgraded using a studwall upgrading concept. Two of the basements were reevaluated using the post and beam upgrading concept. These upgrading concepts are essentially similar and were used as intermediate supports for strengthening the joist floor systems. A probability of survival function was developed for each shelter and each upgrading scheme. The report includes a description of the shelters analyzed, a description of the method used in performing the analysis, detailed results, conclusions and recommendations.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Controls for fine particle emissions from industrial sources in California. Final report, 8:18671 (R;US)

Aix-Marseille-1 Univ., 13 - Marseille (France). Lab. de Chimie des Materiaux
Kinetics and morphology of the oxide growth by oxidation of NiAl coatings on nickel, 8:18259 (R;US)

Albuquerque Dept. of Municipal Development, NM (USA)
Low-cost passive solar demonstration project, 8:17670 (R;US)

American Coll. of Radiology, Chicago, IL
Follow up survey of coal miners. Final report, 8:17194 (R;US)

American Gas Association Labs., Cleveland, OH
Commercial cooking equipment improvement. volume iii: open top, hot top and fry top ranges. Final report jan 81-apr 82, 8:18159 (R;US)
Pulse combustion furnace Phase II: advancement of developmental technology. Annual report Jan-Dec 81, 8:18478 (R;US)

American Society of Mechanical Engineers, New York
Small wind power in the southwestern United States, 8:17734 (R;US)

Ames Lab., IA (USA)
Irradiation effects for in-situ composite conductors, 8:18244 (R;US)

Analytic Sciences Corp., Reading, MA (USA)
Research progress in industry functional modeling, 8:18104 (R;US)

Anatech International Corp., La Jolla, CA (USA)
Effects of residual stress on the UT detectability of surface cracks in feedwater nozzles. Final report, 8:17798 (R;US)

Andros Analyzers, Inc., Berkeley, CA (USA)
Development of a continuous methane monitor. Open file report Jun 77-Mar 80, 8:18662 (R;US)
Ankara Nuclear Research and Training Center (Turkey)
Progress report 1979, 8:18035 (R;TR;In English and Turkish)
AN Latvijskoj SSR, Riga. Inst. Fiziki
TELDE thermoluminescent dosimetry system, 8:18538 (R;SU)
Ansul Co., Marinette, WI (USA)
Automatic fire protection system for mobile underground metal mining equipment. Volume II. Lon term validation testing. Report for 1 Jul 76-Feb 81, 8:17197 (R;US)
Improved fire protection system for underground fueling areas. Volume II. Final report Sep 77-Oct 81, 8:17196 (R;US)
AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.
Damaging factors of fast neutrons, 8:18257 (R;SU;In Russian)
AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki
Correlation effect in the NN-interaction and pd-scattering, 8:19140 (R;UA;In Russian)
Electrodisintegration of three-nucleon nuclei in the interpolation model, 8:19139 (R;UA;In Russian)
Evolution of theoretical concepts concerning the structure of atomic nuclei after the discovery of a neutron, 8:19203 (R;UA;In Russian)
Invariant form of generating matrix elements of the problem of resonating group method examplified by the system $^{12}C + n$, 8:19153 (R;UA;In Russian)
Applied Research Corp., Singapore
A brief market study on electric power systems and energy conservation equipment in Singapore. Foreign market survey report, 8:18048 (R;US)
Applied Solar Energy Corp., City of Industry, CA (USA)
Development of thin wraparound junction silicon solar cells. Final report, Sep. 1980 - Nov. 1981, 8:17565 (R;US)
Argonne National Lab., IL (USA)
Addendum to user's guide for climatological dispersion model. Final report, 8:18593 (R;US)
Development of computerized emission projection and allocation system. phase ii: comparison of existing systems. Final report, 8:18654 (R;US)
Eigenvalue problem for Hermitian matrices with time-reversal symmetry, 8:19262 (R;US)
Fast-neutron scattering cross sections of elemental zirconium, 8:19167 (R;US)
Fast-neutron total and elastic-scattering cross sections of elemental indium, 8:19168 (R;US)
Local energy-management process, 8:17988 (R;US)
Nearshore currents in Lake Michigan between Milwaukee and Chicago, 1977-1978: implications for transport, 8:18738 (R;US)
Recent developments in algorithms and software for trust-region methods, 8:19359 (R;US)
Arizona State Univ., Tempe (USA)
Effective work function determination of selected superalloys, 8:18251 (R;US)
Electron-emission characteristics of tungsten alloys: Mee 492, 8:18252 (R;US)
Arizona State Univ., Tempe (USA). Dept. of Mechanical and Aerospace Engineering
Thermionic emission and surface composition of the lanthanum-boron and yttrium-boron systems, 8:18280 (R;US)
Thermionic-emission microscopy of polycrystalline molybdenum and Mo-$LaCrO_3$, 8:18130 (R;US)
Arizona Univ., Tucson (USA). Dept. of Economics
Dynamic analyses of resource development and extraction, 8:17220 (R;US)
Arizona Univ., Tucson (USA). Dept. of Hydrology and Water Resources
Computer prediction of subsurface radionuclide transport: an adaptive numerical method, 8:18773 (R;US)
Arizona Univ., Tucson (USA). Dept. of Nuclear and Energy Engineering
A hydrodynamic analysis of the electron beam vaporization experiments for UO2. Technical report 1 Oct 79-31 Sep 81, 8:18283 (R;US)
Arizona Univ., Tucson (USA). Environmental Research Lab.
Windows for accepting or rejecting solar-heat gain. Final report, 8:17667 (R;US)
Arizona Univ., Tucson (USA). Office of Arid Lands Studies
A sociotechnical survey of guayule rubber commercialization: a state-of-the-arts report, 8:17576 (R;US)
Arkansas Energy Office, Little Rock (USA)
Arkansas solar-retrofit guide, 8:17655 (R;US)
Arkansas Univ., Fayetteville (USA). Water Resources Research Center
Estimating water demand schedules for selected industries in Arkansas, 8:18028 (R;US)
Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)
Biologic dosimetry for nuclear environments by electron paramagnetic resonance (EPR) methods. Conference paper, 8:18852 (R;US)
Army Armament Research and Development Command, Aberdeen Proving Ground, MD (USA). Ballistics Research Lab.
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8:19051 (R;US)
Contribution to the flat flame olympics: problem B. Final report, 8:18383 (R;US)
Army Armament Research and Development Command, Watervliet, NY (USA). Large Caliber Weapon Systems Lab.
The combined effects of mean stress and aggressive environments on fatigue crack growth. Final technical report, 8:18242 (R;US)
Army Construction Engineering Research Lab., Champaign, IL (USA)
Development and analysis of energy consumption norms for family housing. Final report, 8:18137 (R;US)
Army Electronics Technology and Devices Lab., Fort Monmouth, NJ (USA)
Properties of $SOCl_2$ electrolyte solutions. Conference paper, 8:17974 (R;US)
Tactical gamma and fast neutron dosimetry with leuko dye optical waveguides. Conference paper, 8:18520 (R;US)
Army Engineer Waterways Experiment Station, Vicksburg, MS (USA)
Feasibility for quantitative assessment of available margins inherent in flood protection of nuclear plants. Final report, 8:18741 (R;US)
Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Hydraulics Lab.
Norfork Lake, Arkansas, temperature analysis; mathematical model investigation. Final report Jan-Jun 81, 8:17526 (R;US)
Army Materials and Mechanics Research Center, Watertown, MA (USA)
Influence of composition and process selection on densification of silicon nitride. Final report, 8:18278 (R;US)
Army Missile Command, Redstone Arsenal, AL (USA)
A new midinfrared laser in hydrogen. Conference paper, 8:18429 (R;US)
Army Night Vision Lab., Fort Belvoir, VA (USA)
Electrical properties of heated dielectrics. Conference paper, 8:18297 (R;US)
Arnold Engineering Development Center, Tullahoma, TN (USA)
MHD high-performance demonstration experiment. Quarterly progress report, April 1, 1982-June 30, 1982, 8:18126 (R;US)
Arrowhead Plastic Engineering, Inc., Muncie, IN (USA)
Separation of alcohol-water mixtures by selective adsorption. Final technical report, 8:18193 (R;US)
Aspen Technology, Inc., Cambridge, MA (USA)
Development of a reference data system for the liquefaction technology data base. Technical progress report, 22 September 1982-31 December 1982, 8:17086 (R;US)
Asplundh Environmental Services, Willow Grove, PA (USA)
Management of transmission line rights-of-way for fish and wildlife. Volume 1: background information. Final report, 8:18995 (R;US)
Management of transmission line rights-of-way for fish and wildlife. Volume 2: Eastern United States. Final report, 8:18996 (R;US)
Management of transmission line rights-of-way for fish and wildlife. Volume 3: Western United States. Final report, 8:18997 (R;US)
Association Aeronautique et Astronautique de France, Paris
Wind machine propellers - study of prototypes in steady state regime - non-steady state aspects (helices eoliennes - etude de prototypes en regime stationnaire - aspects instationnaires), 8:17741 (R;US)
Athens Univ. (Greece)
Fast processor for dilepton triggers, 8:18524 (R;US)

Atomic Energy Control Board, Ottawa, Ontario (Canada)
Application of a stratified random sampling technique to the estimation and minimization of respirable quartz exposure to underground miners, 8:17193 (R;CA)
Barium and radium migration in unconsolidated Canadian geological materials, 8:18720 (R;CA)
Nature of reactor accidents, 8:17945 (R;CA)
Studies of cesium and strontium migration in unconsolidated Canadian geological materials, 8:18721 (R;CA)
Atomics International Div., Canoga Park, CA (USA)
LMFBR technology. FFTF cover-gas leakage calculation, 8:17910 (R;US)
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8:17850 (R;US)
Australian Atomic Energy Commission Research Establishment, Lucas Heights
Environmental survey at the AAEC Research Establishment, Lucas Heights - results for 1980, 8:18693 (R;AU)
High repetition rate Q-switched CO_2 laser, 8:18425 (R;AU)
Microbial ecology of Rum Jungle II: environmental study of two flooded opencuts and smaller, associated water bodies, 8:17425 (R;AU)
Production of uranium hexafluoride by the catalyzed fluorox process: pilot plant and supporting bench-scale studies, 8:17322 (R;AU)
Use of thorium as an alternative nuclear fuel, 8:17887 (R;AU)
Avco Lycoming Engine Group, Stratford, CT (USA). Stratford Div.
Determination of effects of ambient conditions on aircraft engine emissions: ALF 502 combustor rig testing and engine verification test. Final report Mar 76-Jan 77, 8:18645 (R;US)

B

Babcock and Wilcox Co., Lynchburg, VA (USA). Nuclear Power Generation Div.
Valve inlet fluid conditions for pressurizer safety and relief valves for B and W 177-FA and 205-FA plants. Final report, 8:17819 (R;US)
Baker (Michael), Jr., Inc., Beaver, PA (USA)
Feasibility of using cemented backfill in active underground coal mines to prevent subsidence. Open file report Apr 79-Nov 81, 8:17151 (R;US)
FGD by-product disposal manual: third edition. Final report, 8:17105 (R;US)
Ball Bros. Research Corp., Boulder, CO (USA). Aerospace Systems Div.
Preliminary study on the use of lasers for the transmission of power, 8:17784 (R;US)
Battelle Columbus Labs., OH (USA)
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8:17185 (R;US)
Energy audit of three energy-conserving devices in a steel-industry demonstration program. Task I. Hague forge furnaces. Final report, 8:18199 (R;US)
Battelle-Northwest, Richland, WA (USA). Pacific Northwest Lab.
User's manual for the instream sediment-contaminant transport model SERATRA. Final report Apr 78-Jan 80, 8:17446 (R;US)
Battelle Pacific Northwest Labs., Richland, WA (USA)
Evaluation of CHESS: Utah asthma study, 1971-1972. Final report, 8:18601 (R;US)
Bayerisches Staatsministerium fuer Landesentwicklung und Umweltfragen, Muenchen (Germany, F.R.)
Planned collecting site for low- and intermediate-level radioactive waste in Bavaria, 8:17367 (R;DE;In German)
B.C. Research, Vancouver (Canada)
Biological characteristics of pulp mill effluents. Part 1. Progress report to March 31, 1978, 8:18972 (R;CA)
Bell Labs., Murray Hill, NJ (USA)
Thoughts on the evolution of dynamic graphics, 8:19362 (R;US)
Bentz (E.J.) and Associates, Inc., Springfield, VA (USA)
Regulatory assessment: interim report, 8:17501 (R;US)
Bettis Atomic Power Lab., West Mifflin, PA (USA)
Analysis of cladding deformation over plenum axial gaps in Zircaloy-clad fuel rods. LWBR Development Program, 8:17854 (R;US)
Nuclear calculational model used in the design of the 900 MW(e) LWBR scale-up concept (AWBA Development Program), 8:17855 (R;US)
Shippingport Atomic Power Station. Technical progress report, January 26-July 25, 1982, 8:17844 (R;US)
Bhabha Atomic Research Centre, Bombay (India)
Analytical Chemistry Division : annual report for the year 1980, 8:18309 (R;IN)
Bio-Organic Division progress report, July 1977-1979, 8:18811 (R;IN)
Radiochemistry Division : annual progress report for 1978, 8:18373 (R;IN)
Recoil chemistry and solid state exchange in cobalt complexes : a new model, 8:18372 (R;IN)
Some aspects of synergistic extraction of actinides and lanthanides from mixed aqueous-organic media, 8:18308 (R;IN)
Synergistic extraction of actinides : Part II. Tetra-and trivalent actinides, 8:18310 (R;IN)
Bhabha Atomic Research Centre, Bombay (India). Spectroscopy Div.
Spectrographic determination of trace elements in basaltic rocks, 8:18307 (R;IN)
Bituminous Coal Research, Inc., Monroeville, PA (USA)
Guidebook for dust control in underground mining. Open file report, 8:17155 (R;US)
Black and Veatch Consulting Engineers, Kansas City, MO (USA)
Lime FGD systems data book: second edition. Final report, 8:17104 (R;US)
Black and Veatch, Kansas City, MO (USA)
Solar Pilot Plant Phase I, detailed design report: collector subsystem research experiment. CDRL Item No. 6 (Approved), 8:17638 (R;US)
Bochum Univ. (Germany, F.R.)
RIA for indol alkaloids, 8:18835 (R;DE;In German)
Bochum Univ. (Germany, F.R.). Abt. Maschinenbau und Konstruktiven Ingenieurbau
Contribution to the analysis of the stress-elasticity behaviour of radial-flow compressor wheels, 8:18408 (R;DE;In German)
Theoretical and experimental investigations of the problem of convective heat transfer in gas heated shock heating installations, 8:18476 (R;DE;In German)
Boeing Computer Services Co., Seattle, WA (USA)
Intermediate photovoltaic system application experiment operational performance report. Volume 5. For G.N. Wilcox Memorial Hospital, Kauai, Hawaii for September 1982, 8:17625 (R;US)
Intermediate photovoltaic system application experiment operational performance report for G.N. Wilcox Memorial Hospital, Kauai, Hawaii, for November 1982, 8:17626 (R;US)
Intermediate photovoltaic system application experiment operational performance report. Lovington Square Shopping Center, Lovington, New Mexico for November 1982. Volume 17, 8:17628 (R;US)
Intermediate photovoltaic system application experiment operational performance report for Dallas-Fort Worth Regional Airport, Texas, for August 1982, 8:17627 (R;US)
Intermediate photovoltaic system application experiment operational performance report for Oklahoma Center for Science and Arts, Oklahoma City, Oklahoma, for November 1982. Volume 7, 8:17631 (R;US)
Intermediate photovoltaic system application experiment operational performance report for Beverly High School, Beverly, Massachussetts for July 1982. Volume 11, 8:17632 (R;US)
Intermediate photovoltaic system application experiment operational performance report for Beverly High School, Beverly, Massachusetts for August 1982. Volume 12, 8:17633 (R;US)
Intermediate photovoltaic system application experiment operational performance report for Beverly High School, Beverly, Massachusetts for September 1982. Volume 13, 8:17634 (R;US)
Intermediate photovoltaic system application experiment operational performance report. Newman Power Station, El Paso, Texas for November 1982. Volume 17, 8:17630 (R;US)
Intermediate photovoltaic system application experiment operational performance report for Newman Power Station, El Paso, Texas for September 1982. Volume 15, 8:17629 (R;US)

Boeing Computer Services Co., Tukwila, WA (USA). Energy Technology Applications Div.
Long-term, mid-term, and short-term fuel scheduling. Volume 1. User's guide. Final report, 8:18105 (R;US)
Long-term, mid-term, and short-term fuel scheduling. Volume 3. Economic dispatch fuel price strategies. Final report, 8:18107 (R;US)
Long-term, mid-term, and short-term fuel scheduling. Volume 2. Programmer's guide. Final report, 8:18106 (R;US)

Boeing Co., Seattle, WA (USA)
Analysis of space systems for the space disposal of nuclear waste follow-on study. Volume 1: executive summary. Final report, 8:17372 (R;US)
Analysis of space systems for the space disposal of nuclear waste follow-on study. Volume 2: technical report. Final report, 8:17373 (R;US)

Booker T. Washington Foundation, Washington, DC (USA)
Feasibility study to develop a marketing plan and strategy for increasing the participation of minority business enterprises and black colleges and universities in energy-related industries. Final report, 8:17999 (R;US)
Feasibility study to develop a marketing plan and strategy for increasing the participation of minority business enterprises and black colleges and universities in energy-related industries, 8:18000 (R;US)

Booz, Allen and Hamilton, Inc., Bethesda, MD (USA)
Competitive assessment of desiccant solar/gas systems for single family residences. Final report Aug 81-Jan 82, 8:17674 (R;US)
Efficient gas utilization in multi-family dwellings. Final report Dec 80-Oct 81, 8:17274 (R;US)

Booz, Allen and Hamilton, Inc., Bethesda, MD (USA). Transportation Consulting Div.
Coal transportation efficiency program: small mine operations. Final report, 8:17191 (R;US)

Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires
Mechanisms of alpha emitter production in ^{12}C induced reactions at 1 GeV, 8:19176 (R;FR)
Nuclear reactions and cosmological rare gases, 8:19028 (R;FR;In French)

Brandeis Univ., Waltham, MA (USA). Dept. of Chemistry
Actinometry in monochromatic flash photolysis: the extinction coefficient of triplet benzophenone and quantum yield of triplet zinc tetraphenyl porphyrin, 8:18360 (R;US)

Brigham Young Univ., Provo, UT (USA). Combustion Lab.
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 9, 1 October 1982-31 December 1982, 8:17186 (R;US)

British Carbonization Research Association, Chesterfield
A study of the changes in coke structure and strength brought about by reaction with carbon dioxide at 1000 deg C. Carbonization research report (final), 8:17096 (R;US)
A study of the influence of specimen size and rate of loading on the tensile strength of coke. Carbonization research report (final), 8:17057 (R;US)
A study of the influence of the addition of coal-tars to vitrains on the optical anisotropy developed during carbonization. Carbonization research report (final), 8:17056 (R;US)
Changes in coke structure associated with preheating of the coal charge, 8:17093 (R;US)
Further considerations of the plastic layer thickness developed within a coke-oven charge. Carbonization research report, 8:17055 (R;US)
Further investigations into the treatment of carryover slurries from coal preheating and pipeline-charging, 8:17178 (R;US)
Further studies of the partial gasification of coke in relation to the coke tensile strength, 8:17053 (R;US)
Investigation of the composition of tuyere coke by analyzing the surface material removed by abrasion. Carbonization research report (final), 8:17094 (R;US)
Low-temperature-tar content of bituminous materials. Part 2. Dense tarmacadam basecourse with crushed-rock aggregate, 8:17081 (R;GB)
Some considerations of the desulphurization of coal for cokemaking, 8:17054 (R;US)
Studies of the size degradation of coke at ambient temperature, 8:17091 (R;US)
The evaluation of the Nippon Steel Corporation reactivity and post-reaction-strength test for coke, 8:17092 (R;US)
The phosphorus content of coal and coke, 8:17090 (R;US)

Brooke Army Medical Center, Fort Sam Houston, TX (USA)
Effects of atomic explosions on field medical installations equipment, 8:18567 (R;US)

Brookhaven National Lab., Upton, NY (USA)
π^0 spectrometer for photopion production studies, 8:18522 (R;US)
Analytic tools for techno-economic assessments of industrial energy efficiency in developing countries, 8:17997 (R;US)
Beam line for experiments with coherent soft x-rays, 8:18493 (R;US)
Cloudwater acidity measurements and formation mechanisms: experimental design, 8:18588 (R;US)
Constitutive relations in TRAC-PD2, 8:17957 (R;US)
2-D fitting and interpolation applied to image-distortion analysis, 8:18825 (R;US)
Flash pyrolysis of biomass with reactive and nonreactive gases, 8:17541 (R;US)
Investigation of the conservatism associated with different combinations between primary and secondary piping responses, 8:17806 (R;US)
Irradiation effects for in-situ composite conductors, 8:18244 (R;US)
ISABELLE. Volume 4. Detector R and D, 8:18513 (R;US)
ISABELLE. Volume 2. Physics, 8:18512 (R;US)
Kinetics of oxidation of aqueous sulfur(IV) by nitrogen dioxide, 8:18587 (R;US)
Neutrino-electron scattering. Progress report, 8:19074 (R;US)
Packing material testing required to demonstrate compliance with 1000-year radionuclide containment. Semiannual report on waste package verification tests, 8:17392 (R;US)
Radioactive materials released from nuclear power plants. Annual report, 1980, 8:18696 (R;US)
Senegal food and energy study: energy use and opportunities for energy-related improvements in the food system, 8:18850 (R;US)
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions, 8:17688 (R;US)
Simultaneous electron capture and excitation in ion-atom collisions, 8:19053 (R;US)
Studies of the gas- and aqueous-phase composition of stratiform clouds, 8:18599 (R;US)
Testing the standard model, 8:19119 (R;US)
Underground science at Homestake, 8:18521 (R;US)

Brown Univ., Providence, RI (USA)
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8:19062 (R;US)
Neutrino-electron scattering. Progress report, 8:19074 (R;US)

Brown Univ., Providence, RI (USA). Dept. of Geological Sciences
Global temperature patterns 6000 years ago. Progress report, 8:19020 (R;US)

Brown Univ., Providence, RI (USA). Dept. of Physics
Composite fermions and Higgs scalars, an explanation for multiple generations, 8:19101 (R;US)

Brown Univ., Providence, RI (USA). Div. of Engineering
Time-resolved far-infrared spectroscopy of excitons. Progress report, February 1982-January 1983, 8:18299 (R;US)

Bundesministerium des Innern, Bonn (Germany, F.R.)
Development of a hydrological data bank for ecological information, 8:18746 (R;DE;In German)

Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)
Construction and operation of a prototype of a central-heating plant fired by coal dust corresponding to the system Schoppe, 8:17182 (R;DE;In German)
Extraction of coal with solvents in liquid and supercritical state under non-hydrogenating and hydrogenating conditions, 8:17008 (R;DE;In German)
Influence of the geological structure on the performance of full-face tunnelling machines in mining, 8:18395 (R;DE;In German)
Investigations into the further utilisation of the end-products from flue-gas desulphurisation washing processes, 8:17100 (R;DE;In German)
Investigations of improvement of luminous efficacy of incandescent lamps by means of chemical regenerative cycles, 8:18138 (R;DE;In German)
Pilot plant for coal hydrogenation - construction phase, 8:17010 (R;DE;In German)
Pre-feasibility study for construction of a commercial coal hydrogenation plant, 8:17009 (R;DE;In German)

Sorption and catalytic reaction in silicoaluminates and silicoborates of the pentasil group, 8:17487 (R;DE;In German)
Study on a district heating transport system based on ammonia-water solutions, 8:18043 (R;DE;In German)
Systems analysis. Humanizing of working conditions in materials transport in coal mining (abridged version), 8:17139 (R;DE;In German)

Bundesstelle fuer Aussenhandelsinformation, Koeln (Germany, F.R.)
Yemen Arab Republic - energy survey 1980, 8:18052 (R;DE;In German)

Optimization of electronic pathway for gamma spectrometry. IAA 82, 8:18533 (R;CS;CZ)
Charles River Associates, Inc., Boston, MA (USA)
Future natural gas supply and demand balance. Final report, 8:17272 (R;US)
Charles River Associates, Inc., Cambridge, MA (USA)
Economic and environmental analysis of the current OSHA lead standard. Appendix G. Financial overview of public companies in the lead industry, 8:18006 (R;US)
Economic and environmental analysis of the current OSHA lead standard: main report, 8:18021 (R;US)
Economic and environmental analysis of the current OSHA lead standard. Appendix H. Feasibility and cost of lead-in-air controls in the lead-acid battery industry, 8:18022 (R;US)
Checchi and Co., Washington, DC (USA)
Senegal food and energy study: energy use and opportunities for energy-related improvements in the food system, 8:18850 (R;US)
Chiapetta, Welch and Associates Ltd., Palos Hills, IL (USA)
Automobile impact forces on concrete wall panels. Technical report, 8:17950 (R;US)
Chicago, City of, IL (USA)
Chicago Navy Pier Terminal Building solar space and water heating demonstration project, 8:17654 (R;US)
Chrysler Corp., Detroit, MI (USA)
Application for certification 1982 model year light-duty vehicles - Chrysler Corporation, 8:18170 (R;US)

City Coll., New York (USA)
Parity-violating weak neutral current effects in elastic e-^{12}C scattering. Progress report, March 1, 1982-December 31, 1982, 8:19118 (R;US)
Selection and training of judges for sensory evaluation of the intensity and character of diesel exhaust odors. Environmental health series; air pollution, 8:18657 (R;US)

Clemson Univ., SC (USA). Water Resources Research Inst.
^{228}Ra, ^{226}Ra and ^{223}Ra in South Carolina ground water: measurement techniques and isotope relationships, 8:17315 (R;US)

Cold Regions Research and Engineering Lab., Hanover, NH (USA)
Evaluating the heat pump alternative for heating enclosed wastewater treatment facilities in cold regions. Special report, 8:18473 (R;US)

College de France, 75 - Paris. Lab. de Physique Corpusculaire
Study of the multimuon event production in the hadronic interactions at 150 and 280 GeV/c, 8:19095 (R;FR;In French)

Colorado Dept. of Highways, Denver (USA)
Geothermal energy for highway snow and ice control. Summary report, 8:17724 (R;US)

Colorado Dept. of Natural Resources, Denver (USA)
Colorado coal analyses, 1976-1979. Information series 10, 8:17088 (R;US)
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8:17318 (R;US)

Colorado Div. of Wildlife, Denver (USA)
Studies of the limnology, fish populations, and fishery of Turquoise Lake, Colorado - 1979-80, 8:17530 (R;US)

Colorado Geological Survey, Denver (USA)
Appendices of an appraisal for the use of geothermal energy in state-owned buildings in Colorado. Section F. Steamboat Springs, 8:17722 (R;US)
Appendices of an appraisal for the use of geothermal energy in state-owned buildings in Colorado. Section B: Buena Vista, 8:17725 (R;US)
Bibliography of geothermal reports in Colorado, 8:17690 (R;US)
Energy resources of the Denver and Cheyenne Basins, Colorado - resource characteristics, development potential, and environmental problems. Environmental Geology 12, 8:18747 (R;US)
Promises and problems of a new uranium-mining method: in-situ solution mining. Environmental geology 11, 8:17317 (R;US)

Colorado School of Mines, Golden (USA). Exploratory Research Lab.
Geophysical detection of groundwater. Final technical report Sep 80-Apr 82, 8:18737 (R;US)

Colorado State Univ., Fort Collins (USA)
Spring and springbrook fauna of the Piceance Basin, Colorado, 8:17307 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Civil Engineering
Behavior of LNG vapor clouds: wind-tunnel tests on the modeling of heavy plume dispersion. Final report Jul 79-Sep 81, 8:17275 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Electrical Engineering
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report, 8:17830 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Microbiology
Replication of japanese encephalitis virus. Annual summary report no. 3, jul 80-sep 81, 8:18810 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Radiology and Radiation Biology
Ecological aspects of the nuclear age: selected readings in radiation ecology, 8:18718 (R;US)

Colorado State Univ., Fort Collins (USA). Solar Energy Applications Lab.
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8:17657 (R;US)

Colorado Univ., Denver (USA). Center for Environmental Sciences
Health and environmental effects document for oil shale - 1982, 8:17305 (R;US)

Columbia Univ., New York (USA). Dept. of Chemical Engineering
Parametric study of CHF data. Volume 2. A generalized subchannel CHF correlation for PWR and BWR fuel assemblies. Final report, 8:17930 (R;US)

Combustion Engineering, Inc., Chattanooga, TN (USA)
Steam-generator support-plate radiographic evaluation system. Final report, 8:17824 (R;US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report, 8:17826 (R;US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report, 8:17827 (R;US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 3. Appendix T. Final report, 8:17828 (R;US)

Combustion Engineering, Inc., Chattanooga, TN (USA). Chattanooga Nuclear Operations
Calibration of instrumented steam separators to determine quality and flow distribution in an operating steam generator. Final report, 8:17823 (R;US)

Combustion Engineering, Inc., Windsor, CT (USA)
Valve inlet fluid conditions for pressurizer safety and relief valves in combustion engineering-designed plants. Final report, 8:17818 (R;US)

Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro
Analysis of the metallic containment integrity of Angra 2/3 reactor under the effects of the design basis accident, 8:17918 (R;BR;In Portuguese)
First accident simulation for Angra-1 power plant using the ALMOD computer code, 8:17917 (R;BR;In Portuguese)

Comitato Nazionale per l'Energia Nucleare, Bologna (Italy)
FISPET: a code for computing fission spectra from ENDF/B, 8:17895 (R;IT)
Hartree-Fock problem for Skyrme interaction. Fundamental description for double magic nuclei, 8:19195 (R;IT;IT)

Industrial experience of irradiated nuclear fuel reprocessing, 8:17333 (R;BE;In French)

Concawe, The Hague (Netherlands)
Ecological monitoring of aqueous effluents from petroleum refineries, 8:18764 (R;US)

CONSAD Research Corp., Pittsburgh, PA (USA)
Developing validation strategies for the financial reporting system. Annotated bibliography, 8:18061 (R;US)
Developing validation strategies for the financial-reporting system. Final report, 8:18062 (R;US)

Cooper Union Research Foundation, New York (USA)
Comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows, 8:18387 (R;US)
Computer analysis of entrainment flow gasification phenomena. Quarterly technical progress report No. V, August 10, 1982-November 9, 1982, 8:17027 (R;US)

Coordinating Research Council, Inc., Atlanta, GA (USA)
Effects of fuel volatility on driveability of 1980 model cars at low and intermediate ambient temperature, 8:17248 (R;US)

Cornell Univ., Ithaca, NY (USA)
Dry fermentation of agricultural residues. Final subcontract report, 8:17586 (R;US)

Cornell Univ., Ithaca, NY (USA). Dept. of Agricultural Economics
Analysis of the economic impacts from ethanol production in three New York State regions. Final report, 8:17572 (R;US)

Cornell Univ., Ithaca, NY (USA). Dept. of Chemistry
Investigation of the particulate phase of acid precipitation, 8:18680 (R;US)

Cornell Univ., Ithaca, NY (USA). Dept. of Environmental Engineering
Evaluation of limestone neutralization of acidic Adirondack surface waters, 8:18750 (R;US)

Cornell Univ., Ithaca, NY (USA). Dept. of Structural Engineering
Strength and stiffness of uniaxially tensioned reinforced concrete panels subjected to membrane shear. Technical report, 8:17949 (R;US)

Cornell Univ., Ithaca, NY (USA). Sibley School of Mechanical and Aerospace Engineering
Probabilistic models of the stress-rupture of composite materials. Phase VI. Progress report, for the period June 15, 1982 to June 14, 1983, 8:18289 (R;US)

Corps of Engineers, Chicago, IL (USA). North Central Div.
Coal traffic analysis to accompany Great Lakes harbors study, 8:17169 (R;US)
Iron ore traffic analysis to accompany Great Lakes harbors study, 8:18167 (R;US)

Council for Scientific and Industrial Research, Pretoria (South Africa). National Electrical Engineering Research Inst.
Comparison of the energy consumption during start/stop driving conditions of two types of battery vehicle drive systems, 8:18235 (R;US)

Curtiss-Wright Corp., Wood-Ridge, NJ (USA). Power Systems Div.
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8:17750 (R;US)
Test and evaluation of hot-gas cleanup devices, Phase I and II (Task 1). Technical progress report, March 1-May 31, 1982, 8:17102 (R;US)

D

Davis Engineering, Inc., Sheridan, WY (USA)
Feasibility study for the production of ethyl alcohol and xanthan polymer from barley fermentation. Final report, 8:17545 (R;US)

Defence Research Establishment Valcartier, Courcelette, Quebec (Canada)
Investigation on the absorptance of stainless steel targets irradiated by a tea-co2 laser, 8:18243 (R;US)

Defense Atomic Support Agency, Washington, DC (USA)
The residual radiation pattern for various surface wind velocities - underwater atomic burst, 8:18568 (R;US)

Defense Intelligence Agency, Washington, DC (USA). Directorate for Scientific and Technical Intelligence
Bibliography of Soviet laser developments, Number 52, March - April 1981, 8:18428 (R;US)

Defense Nuclear Agency, Kirtland AFB, NM (USA)
Joint DOD/DOE nuclear weapons accident exercise (NUWAX-81). After action report. Volume II, 8:18569 (R;US)

Delaware Univ., Newark (USA). Inst. of Energy Conversion
Phase-change materials in masonry construction. Final report, 8:17652 (R;US)

Delaware Univ., Newark (USA). Water Resources Center
Small surface coal mine operators handbook. Final report, 8:17200 (R;US)

Democritus Nuclear Research Center, Athens (Greece)
Phytoplankton ecology of the Saronicos Gulf, Aegean Sea. Data report - Year 1980. Part 1. Hydrography, 8:18739 (R;GR)
Standard real numbers, 8:19366 (R;GR)

Department of Energy, Albuquerque, NM (USA). Albuquerque Operations Office
Long-term management USDOE transuranic waste, 8:17405 (R;US)

Department of Energy, Bartlesville, OK (USA). Bartlesville Energy Research Center
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8:17213 (R;US)

Department of Energy, Bartlesville, OK (USA). Bartlesville Energy Technology Center
Computer processing of mass-spectral data. Part V. Assignment of formulas to experimental masses. Representative databases for program FZM, 8:18348 (R;US)

Department of Energy, Grand Forks, ND (USA). Grand Forks Energy Technology Center
Comparison of inorganics in three low-rank coals, 8:17084 (R;US)
Survey of synfuel technology for lignite, 8:17023 (R;US)

Department of Energy, London (UK)
Energy conservation in the production of domestic hot water, 8:18143 (R;GB)
Review of the UK transport energy outlook: and policy recommendations, 8:18168 (R;GB)
Tidal power from the Severn estuary, volume 1, 8:17727 (R;GB)
Tidal power from the Severn estuary. Volume 2: analysis, studies, reports and evaluations, 8:17728 (R;GB)

Department of Energy, Morgantown, WV (USA). Morgantown Energy Technology Center
Hydraulic fracturing experiments in Devonian shale and pre-fractured hydrostone. Final report, 8:17279 (R;US)

Department of Energy, Washington, DC (USA)
Tennol, Inc. - loan-guarantee application: Marion County, Tennessee. Environmental assessment, 8:17543 (R;US)

Department of Energy, Washington, DC (USA). Assistant Secretary for Nuclear Energy
Federal Nuclear Energy Program: a synopsis, 8:17791 (R;US)

Cost saving and safety issues in the Billings Area of the Western Area Power Administration, 8:18079 (R;US)
Department of Energy-assisted sale of 3.15 million gallons of diesel fuel for consumers in the state of Montana, 8:17245 (R;US)
Entitlements exemptions for new refiners, 8:17244 (R;US)
High-level nuclear-waste-immobilization program, 8:17359 (R;US)
Inspection of the safeguards, security, and safety of special nuclear materials, 8:17465 (R;US)
Procedures for checking the proper classification of reports declassified during the comprehensive review, 8:18039 (R;US)
Report on management issues in the Western Area Power Administration, 8:18080 (R;US)
Report on the Federal Energy Regulatory Commission's role in the Department's small hydroelectric development programs, 8:17525 (R;US)
Report on the Rural Energy Initiative Hydroelectric Program, 8:17524 (R;US)
Uneconomical practices of the purchasing function at the Pittsburgh and Midway Coal Company, 8:17199 (R;US)
Department of Housing and Urban Development, Washington, DC (USA). Office of Policy Development and Research
Prediction of pediatric blood lead levels from gasoline consumption, 8:18714 (R;US)
Department of the Air Force, Washington, DC (USA)
Axial flow laser cavity, 8:18447 (P;US)
Delta wing nozzle assembly for chemical lasers, 8:18444 (P;US)
Diffusion barrier for long wavelength laser diodes, 8:18446 (P;US)
Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)
Electroweak effects in e^+e^- annihilations, 8:19077 (R;DE)
Introduction to the electroweak theory, 8:19099 (R;DE)
Looking for the GUT monopole, 8:19120 (R;DE)
Measurement of R in e^+e^- annihilation for $\sqrt{s}$ between 7.4 and 9.4 GeV, 8:19078 (R;DE)
Observation of topologically isolated energetic electrons, 8:19079 (R;DE)
Prediction of low-lying oddballs in lattice QCD, 8:19100 (R;DE)
DHR, Inc., Washington, DC (USA)
Methanol-use options study: Phase 1. Final report, 8:17514 (R;US)
Donovan, Hamester and Rattlen, Inc., Washington, DC (USA)
Africa energy survey methodology: Volume I, 8:18054 (R;US)
Africa energy survey methodology. Volume II: Appendix II, data base, 8:18055 (R;US)
Support to CS in the redraft of SEMP legislation, 8:18060 (R;US)
Dow Chemical U.S.A., Freeport, TX. Texas Div.
Study on scale formation and suppression in heat-exchange systems for simulated geothermal brines. Final report, January 12, 1976-March 5, 1978, 8:17716 (R;US)
Drexel Univ., Philadelphia, PA (USA). Dept. of Mechanical Engineering and Mechanics
Water entrainment in intercompartmental flow. Final report, 8:17932 (R;US)
Duke Power Co., Huntersville, NC (USA). Environmental Services Section
Relations between phytoplankton growth rates and nutrient dynamics in Lake Norman, North Carolina. Technical report series, 8:18742 (R;US)
Duke Univ., Durham, NC (USA). Medical Center
Effects of 200, 591 and 2450 mhz microwaves on cerebral energy metabolism, 8:18985 (R;US)
Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Plant
Present status and future direction of plutonium process chemistry, 8:17337 (R;US)
Dynamac Corp., Rockville, MD (USA)
Bibliography on air pollution and acid rain effects on fish, wildlife, and their habitats. Final report, 8:18666 (R;US)
Dynamic Science, Inc., Fairfax, VA (USA)
Fuel efficient train operations: A preliminary investigation with the locomotive data acquisition package on the Union Pacific Railroad. Interim report Jun-Nov 80, 8:18172 (R;US)

E

Eagle-Picher Co., Joplin, MO (USA)
Calcium inorganic electrolyte battery development. Final report Apr-Oct 81, 8:17971 (R;US)
Ebon Research Systems, Washington, DC (USA)
Emerging technologies for the control of hazardous wastes. Final report, 8:18734 (R;US)
Ecole Polytechnique Federale, Lausanne (Switzerland)
Activities report of the hydraulics laboratory, 8:17521 (R;CH;In several languages)
Economic Development Administration, Washington, DC (USA). Research and Evaluation Div.
Spatial dimensions of supply economics with energy as an object case. Final report, 8:18800 (R;US)
EDS Nuclear, Inc., Norcross, GA (USA)
Evaluation of RETRAN-02 capabilities for small-break LOCA analysis. Final report, 8:17933 (R;US)
EDS Nuclear, Inc., San Francisco, CA (USA)
Nuclear-plant response to grid electrical disturbances. Final report, 8:17936 (R;US)
EG and G Idaho, Inc., Idaho Falls (USA)
Analysis of fusion-blanket cooling-tube ruptures, 8:19333 (R;US)
Application of analytical capability to predict rapid cladding cooling and quench during the blowdown phase of a large break loss-of-coolant accident, 8:17922 (R;US)
Conceptual design of alternative core melt mitigation systems for a PWR with an ice-condenser containment, 8:17956 (R;US)
Consequences of a tube rupture in a fusion-reactor blanket, 8:19331 (R;US)
Control of radiolytic gases in liners of radioactive zeolites, 8:17816 (R;US)
Directions in low-level radioactive waste management. The siting process: establishing a low-level waste-disposal facility, 8:17360 (R;US)
Experimental investigation of muon-catalyzed fusion, 8:19334 (R;US)
Hydrothermal injection experiments at the Raft River KGRA, Idaho, 8:17706 (R;US)
Image analysis for facility siting: a comparison of low- and high-altitude image interpretability for land use/land cover mapping, 8:18731 (R;US)
Instrumentation and electrical program at TMI-2, 8:17925 (R;US)
Investigation of hydrogen-burn damage in the TMI-2 reactor building, 8:17927 (R;US)
Ion-gun tritium-permeation testing, 8:19332 (R;US)
Leach tests of simulated low-level transuranic waste forms containing transuranic elements, 8:17364 (R;US)
Operational readiness and the human factors environment, 8:18001 (R;US)
Overview of DOE proposed loss-of-coolant accident (LOCA) rule-revision study, 8:17921 (R;US)
Preliminary report of TMI-2 in-core instrument damage, 8:17939 (R;US)
Technology transfer at Three Mile Island Unit 2, 8:17923 (R;US)
TMI-2 quick look examination, 8:17926 (R;US)
TMI-2 reactor-vessel head removal and damaged-core-removal planning, 8:17928 (R;US)
EG and G, Inc., Goleta, CA (USA). Energy Measurements Group
Possible effects of drilling operations in Section 6D, Naval Petroleum Reserve No. 2, Kern County, California on the endangered San Joaquin kit fox, blunt-nosed leopard lizard, and other sensitive species, 8:17234 (R;US)

EG and G, Inc., Middletown, PA (USA). Technical Integration Office
Technology transfer in the DOE Three Mile Island research programs, 8:17924 (R;US)
Ehrenkrantz Group, New York (USA)
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8:17657 (R;US)
EIC Labs., Inc., Newton, MA (USA)
Development of host crystals for ce(+3) blue and blue-green solid-state lasers. Final report 1 Jan-30 Jun 82, 8:18430 (R;US)
Lithium cycling in polymethoxymethane solvents. Technical report, 8:17973 (R;US)
Thermal decomposition of dimethoxymethane electrolyte solution. Technical report, 8:17972 (R;US)
Eidgenoessische Technische Hochschule, Zurich (Switzerland)
Energy models for generation planning and midterm operation of hydrothermal power systems, 8:18112 (R;DE;In German)
Elmco Mining Machinery International, Salt Lake City, UT (USA)
A clean internal combustion engine for underground mining machinery. A technical assessment and program plan. Final report on Phase I Aug 80-Dec 81, 8:18409 (R;US)
Electric Power Research Inst., Palo Alto, CA (USA)
Proceedings of the seventh annual EPRI contractors' conference on coal liquefaction, 8:17033 (R;US)
Electric Power Research Inst., Palo Alto, CA (USA). Nuclear Power Div.
EPRI PWR Safety and Relief Value Test Program: safety and relief valve test report, 8:17822 (R;US)
EPRI PWR Safety and Relief Valve Test Program: test condition justification report, 8:17820 (R;US)
Emmanuel Coll., Boston, MA (USA). Physics Research Div.
Study and analyze energetic particle and magnetic activity data. Final report 1 apr 79-31 mar 82, 8:19027 (R;US)
Energy and Environmental Analysis, Inc., Arlington, VA (USA)
Industrial energy productivity project: other industries. Final report, 8:18183 (R;US)
Industrial energy productivity project: the pulp and paper industry. Final report, 8:18182 (R;US)
Energy and Minerals Research Co., Exton, PA (USA)
Leak response gelling of liquefied natural gas (LNG). Final report Jan-Oct 81, 8:17289 (R;US)
Energy Mangement Corp., Gardena, CA (USA)
Cogeneration feasibility study. Final report, 8:17763 (R;US)
Energy Services, Inc., Idaho Falls, ID (USA)
Industrial food processing and space heating with geothermal heat. Final report, February 16, 1979-August 31, 1982, 8:17715 (R;US)
Energy Utilization Systems, Inc., Monroeville, PA (USA)
Examination and life assessment of field-tested heat-pump water heaters, 8:18149 (R;US)
Engineering and Economics Research, Inc., Vienna, VA (USA)
GEEF: a geothermal engineering and economic feasibility model. Description and user's manual, 8:17721 (R;US)
Environmental Control Technology, Inc., Ann Arbor, MI (USA)
Cosis: cost of service information system. Model-simulation, 8:18117 (R;US)
Environmental Protection Agency, Ann Arbor, MI (USA)
Distribution of methanol as a transportation fuel. Technical report, 8:17503 (R;US)
Interim report for EPA/EMA cooperative test program. Technical report, 8:18643 (R;US)
Environmental Protection Agency, Ann Arbor, MI (USA). Emission Control Technology Div.
Effect of low cost repairs on I/M failed vehicles, 8:18239 (R;US)
Environmental Protection Agency, Athens, GA (USA). Environmental Research Lab.
Multimedia exposure assessment model data needs, 8:18611 (R;US)
Environmental Protection Agency, Cincinnati, OH (USA). Municipal Environmental Research Lab.
Reclamation of pyritic waste, 8:17129 (R;US)
Environmental Protection Agency, Corvallis, OR (USA). Environmental Research Lab.
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8:18974 (R;US)
Environmental Protection Agency, Dallas, TX (USA). Region VI
Environmental impact statement: Henry W. Pirkey Power Plant Unit-I/South Hallsville Surface Lignite Mine Project, Harrison County, Texas. Final report (draft), 8:17776 (R;US)
Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab.
Cadmium and endrin toxicity to fish in waters containing mineral fibers, 8:18975 (R;US)
Environmental Protection Agency, Las Vegas, NV (USA). Environmental Monitoring Systems Lab.
Animal investigation program 1980 annual report: Nevada Test Site and vicinity, 8:18723 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA)
Air pollution emission test. Volume I. first interim report: continuous sulfur dioxide monitoring at steam generators, 8:18624 (R;US)
PSD monitoring. Memorandum report, 8:18661 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA). Emission Standards and Engineering Div.
Revised standards for basic oxygen process furnaces: background information for proposed standards, 8:18703 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA). Environmental Criteria and Assessment Office
A review of air pollutant damage to materials, 8:18660 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA). Environmental Sciences Research Lab.
An experimental study of turbulence in an urban environment, 8:18591 (R;US)
Evaluation of four urban-scale photochemical air quality simulation models, 8:18646 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA). Industrial Environmental Research Lab.
State-of-the-art combustion modification NOx control for stationary combustion equipment, 8:17109 (R;US)
Sulfur oxides control technology in Japan, 8:18659 (R;US)
Environmental Protection Agency, Research Triangle Park, NC (USA). Office of Air Quality Planning and Standards
Air quality data - 1975 annual statistics including summaries with reference to standards, 8:18678 (R;US)
Air quality data for non-criteria pollutants - 1957 through 1970. Final report, 8:18615 (R;US)
Carcinogen assessment group's final report on population risk to ambient benzene exposures. Final report, 8:18977 (R;US)
Comparison of three ozone models: urban airshed, City-specific EKMA and proportional Rollback. Final report, 8:18629 (R;US)
Compilation of air pollutant emission factors, third edition, supplement 13 (including supplements 1-7), 8:18675 (R;US)
Compilation of air pollutant emission factors, third edition (including supplements 1-7) supplement 10, 8:18619 (R;US)
Compilation of air pollutant emission factors, third edition (including supplements 1-7) supplement 12, 8:18620 (R;US)
Control techniques for particulate emissions from stationary sources - Volume 2. Final report, 8:18676 (R;US)
Control techniques for particulate emissions from stationary sources - Volume 1. Final report, 8:18677 (R;US)
Energy impact assessment for alternative levels of the national ambient air quality standard for ozone (draft), 8:18628 (R;US)
Evaluation of the empirical kinetics modeling approach, 8:18612 (R;US)
Guideline for implementation of the standardized SIP filing system, 8:18707 (R;US)
Guideline for the implementation of the Ambient Air Monitoring Regulations 40 CFR Part 58, 8:18626 (R;US)
Maps depicting nonattainment areas pursuant to Section 107 of the Clean Air Act - 1982, 8:18618 (R;US)
National air pollutant emission estimates, 1970-1978. Final report, 8:18623 (R;US)
National ambient air quality standard for lead. Draft environmental impact statement, 8:18639 (R;US)
National Emissions Data System (NEDS) source classification code and emission factor listing, 8:18627 (R;US)
Point and area source checklist for evaluating 1982 ozone SIP emission inventories, 8:18642 (R;US)
Procedures for emission inventory preparation. Volume I: Emission inventory fundamentals, 8:18649 (R;US)
Procedures for emission inventory preparation. Volume IV: Mobile sources, 8:18652 (R;US)
Procedures for emission inventory preparation. Volume V: Bibliography, 8:18653 (R;US)
Procedures for emission inventory preparation. Volume II: Point sources, 8:18650 (R;US)
Procedures for emission inventory preparation. Volume III: Area sources, 8:18651 (R;US)

Supplementary guidelines for lead implementation plans revised Section 4.3 (Projecting Automotive Lead Emissions). Final report, 8:18625 (R;US)
Technical basis for developing control strategies for high ambient concentrations of nitrogen dioxide, 8:18630 (R;US)

Environmental Protection Agency, Washington, DC (USA)
Air program strategy for attainment and maintenance of ambient air quality standards and control of other pollutants, 8:18705 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Drinking Water
Protection of ground water resources from the effects of accidental spills of hydrocarbons and other hazardous substances (guidance document). Technical report, 8:18751 (R;US)

Environmental Resources Management, Inc., West Chester, PA (USA)
Vienna fly ash disposal site: problem definition study. Final report, 8:18755 (R;US)

ERA Technology Ltd., Leatherhead (UK)
An evaluation of commercial battery discharge indicators. Final report, 8:17975 (R;US)

Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Fachbereich Mathematik und Physik
Nuclear and solid state investigations for the non-cubic paramagnetic system europium in samarium, 8:18256 (R;DE;In German)

Escher Wyss G.m.b.H., Ravensburg (Germany, F.R.)
Air circuit with heat pump, 8:18200 (TG;US)

ESG, Inc., Atlanta, GA (USA)
Analysis of field-test data from domestic solar-water heaters in the southern United States, period through September 1982, 8:17651 (R;US)

Exxon Nuclear Co., Inc., Richland, WA (USA)
Diversion-resistant nuclear-fuels processing. Progress report, 1980-1981, 8:17331 (R;US)

Exxon Nuclear Idaho Co., Inc., Idaho Falls (USA)
ICPP ^{85}Kr Monitoring System, 8:17329 (R;US)
ICPSEF: a user's manual for the computer mathematical model of the ICPP purex solvent extraction system, 8:17330 (R;US)

Exxon Research and Engineering Co., Florham Park, NJ (USA)
EDS coal-liquefaction process development. Phase V. Quarterly technical progress report, July 1-September 30, 1982, 8:17020 (R;US)

Exxon Research and Engineering Co., Linden, NJ (USA). Advanced Energy Systems Labs.
Development of a circulating zinc-bromine battery. Phase I. Final report, 8:17980 (R;US)

F

Factory Mutual Research Corp., Norwood, MA (USA)
Dispersal of LNG vapor clouds with water spray curtains. Annual report on phase 1 (final) Dec 80-Dec 81, 8:17276 (R;US)

Federal Emergency Management Agency, Washington, DC (USA)
Ready II damage estimation system: Build Gazetteer program. Final report, 8:18581 (R;US)
Ready II damage estimation system: fallout radiation levels program. Final report, 8:18578 (R;US)
Ready II damage estimation system: fallout trajectories program. Final report, 8:18580 (R;US)
Ready II damage estimation system, NORAD Report Handler. Final report, 8:18577 (R;US)
Ready II damage estimation system: observations program. Final report, 8:18579 (R;US)

Federal Energy Regulatory Commission, Washington, DC (USA). Office of Electric Power Regulation
Juniper/Cross Mountain project FERC No. 2757 - Colorado. Draft Environmental Impact Statement, 8:17527 (R;US)

Federal Highway Administration, Washington, DC (USA)

Garrett Turbine Engine Co., Phoenix, AZ (USA)

Ceramic gas turbine engine demonstration program. Final report 2 Jan 76-31 May 81, 8:18214 (R;US)

Gas Processors Association, Tulsa, OK (USA)

Measurement of total fraction condensed and phase boundary for a simulated natural gas. Research report, 8:17291 (R;US)

GA Technologies, Inc., San Diego, CA (USA)

Comparison of cask and dry well concepts for retrievable storage of high-level waste, 8:17365 (R;US)

GCA Corp., Bedford, MA (USA). GCA Technology Div.

Carbon monoxide hot spot guidelines. Volume 1: techniques, 8:18704 (R;US)

General Accounting Office, Washington, DC (USA). Energy and Minerals Div.

Feasibility and cost of interim storage for the Strategic Petroleum Reserve, 8:17252 (R;US)

Federal encouragement of mining investment in developing countries for strategic and critical minerals has been only marginally effective, 8:18026 (R;US)

FERC expenditures for the Trans-Alaska Pipeline System (TAPS) case, 8:17226 (R;US)

Possible effects of increased royalty rate for federal onshore oil and gas leases, 8:17225 (R;US)

Termination of the common support agreement, 8:19396 (R;US)

General Accounting Office, Washington, DC (USA). International Div.

Determination of oil price in the International-Emergency Sharing System: an unresolved issue, 8:18073 (R;US)

General Accounting Office, Washington, DC (USA). Office of the Comptroller General

Actions being taken to help reduce occupational radiation exposure at commercial nuclear powerplants, 8:17938 (R;US)

Changes needed in US assistance to deter deforestation in developing countries, 8:18027 (R;US)

Changing ownership within the US minerals industry: possible causes and steps needed to determine the effects, 8:18072 (R;US)
Department of Agriculture could do more to help farmers conserve energy, 8:18194 (R;US)
Department of Energy's procurement information system: expectations have not been realized, 8:19356 (R;US)
Indoor air pollution: an emerging health problem, 8:18959 (R;US)
Problems in air-quality monitoring system affect data reliability, 8:18016 (R;US)
Repeal of unneeded Outer Continental Shelf production rate-setting functions would cut costs, 8:17224 (R;US)
Review of the Trans-Alaska Pipeline Liability Fund's financial statements for the year ended December 31, 1981, 8:17223 (R;US)
Status of the Great Plains coal gasification project, August 1982, 8:17048 (R;US)

General Accounting Office, Washington, DC (USA). Procurement, Logistics, and Readiness Div.
Opportunities for improved oil recycling still exist, 8:17231 (R;US)

General Electric Co., Binghamton, NY (USA). Armament and Electrical Systems Dept.
Motor technology for electric remotely piloted vehicle (RPV). Final report Sep-Dec 81, 8:18234 (R;US)

General Electric Co., Philadelphia, PA (USA). Advanced Energy Programs Dept.
Marine biomass: New York state site and species study compositional analysis and systems studies. Final report Mar-Dec 81, 8:17494 (R;US)
SNG from land-based biomass 1981 program. Final report Jul-Dec 81, 8:17492 (R;US)

General Electric Co., San Jose, CA (USA). Nuclear Engineering Div.
BWR cobalt-source identification. Final report, 8:17795 (R;US)

General Electric Co., Schenectady, NY (USA). Gas Turbine Div.
Applications of composite gas-turbine components. Final report. Phase I, 8:17754 (R;US)

General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.
Anode phenomena in vacuum arcs, 8:18467 (R;US)

General Motors Proving Ground, Milford, MI (USA)
Application for certification 1982 model year heavy-duty diesel engines - General Motors, 8:18226 (R;US)

General Public Utilities, Parsippany, NJ (USA)
Control of radiolytic gases in liners of radioactive zeolites, 8:17816 (R;US)

Geological Survey, Albany, NY (USA)
Dye-dispersion study at proposed pumped-storage project on Hudson River at Cornwall-on-the-Hudson, New York. Open-file report, 8:17531 (R;US)

Geological Survey, Albuquerque, NM (USA)
Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8:17410 (R;US)

Geological Survey, Albuquerque, NM (USA). Water Resources Div.
Geologic and well-construction data for the H-7 borehole complex near the proposed Waste Isolation Pilot Plant site, southeastern New Mexico. Water resources investigations, 8:17400 (R;US)

Geological Survey, Denver, CO (USA)
Basic data report for drillhole ERDA 9 (Waste Isolation Pilot Plant WIPP), 8:17411 (R;US)
Three-dimensional modeling of the Nevada Test Site and vicinity from teleseismic p-wave residuals, 8:19013 (R;US)

Geological Survey, Denver, CO (USA). Water Resources Div.
Method for estimating historical irrigation requirements from ground water in the high plains in parts of Colorado, Kansas, Nebraska, New Mexico, Oklahoma, South Dakota, Texas, and Wyoming. Water-resources investigations (interim), 8:18851 (R;US)

Geological Survey, Reston, VA (USA)
Minutes and group memories from all NERBC/USGS-RPA power plant siting task force meetings through October, 1980. Appendix, 8:17771 (R;US)

Geomet, Inc., Gaithersburg, MD (USA)
Method for estimating wind characteristics at potential wind-energy-conversion sites, 8:17742 (R;US)

Georgia Inst. of Tech., Atlanta (USA)
Anaerobic treatment of gasifier effluents. Quarterly report No. 6, 8:17101 (R;US)

Georgia Inst. of Tech., Atlanta (USA). School of Nuclear Engineering
Saturated tearing modes in tokamaks with divertors, 8:19287 (R;US)

Georgia Univ., Athens (USA). Dept. of Botany
Environmental stress-mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 8:18955 (R;US)

Gesamthochschule Paderborn (Germany, F.R.). Fachbereich Chemie und Chemietechnik
Spectra identification and interpretation comparing the spectral informations - the example of infrared, C^{13} magnetic resonance and mass spectroscopy, 8:18255 (R;DE;In German)

Gesellschaft fuer Reaktorsicherheit m.b.H. (GRS), Koeln (Germany, F.R.)
List of reactor safety research reports from BMFT, CEA, EPRI, JSTA and USNRC, 8:17941 (R;DE;In German)
Progress in the safety evaluation of nuclear power plants, 8:17940 (R;DE;In German)

Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)
Scientific report 1981, 8:19133 (R;DE)

Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Abt. fuer Pathologie
Experimental study of the occurence and properties of C-type retroviruses in radiation-induced osteosarcomas in mice, 8:18858 (R;DE;In German)
Pathogenesis of radiation-induced osteosarcomas, 8:18857 (R;DE;In German)

Gilbert Associates, Inc., Reading, PA (USA)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume I, 8:17752 (R;US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume II, 8:17753 (R;US)

Giner, Inc., Waltham, MA (USA)
Molten-carbonate fuel-cell-powerplant desulfurization systems. Final report, November 1978-November 1979, 8:18132 (R;US)

Globetrotters Engineering Corp., Chicago, IL (USA)
Compaction criteria for coal waste embankments. Open file report Feb 80-Aug 81, 8:17115 (R;US)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii
Basic possibility of reducing doubling time by the heterogeneous arrangement of different types of fuel in the fast reactor, 8:17857 (TG;GB)
Combined use of uranium and plutonium in large fast reactors, 8:17858 (TG;GB)
Local NN interactions in a system of four nucleons and the method of hyperspherical harmonics, 8:19136 (R;SU;In Russian)
Method for synthesis of programs for a subgroup of problems of solution choice, 8:19375 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki
Cross sections of low-energy anti pD interaction, 8:19138 (R;SU)
Data analysis on hadron absorption cross section by nuclei at 5-400 GeV, 8:19086 (R;SU;In Russian)
Low-energy particle coordinate detector on the base condensated krypton, 8:18534 (R;SU;In Russian)
Masses of charmed particles, decay modes and lifetimes, 8:19085 (R;SU;In Russian)
Mechanism of water radiolysis, 8:18366 (R;SU;In Russian)
Properties and interactions of neutrino (1977-1980). Charm production, 8:19087 (R;SU;In Russian)
Proton and neutron yields from nuclei and from separated nickel and tin isotopes, 8:19084 (R;SU;In Russian)
Proton emission in the pion-nucleus interactions which reduce to production of $\pi^+\pi^-$ system, 8:19088 (R;SU;In Russian)
Resonance structure of the Λ anti Λ system in π^-p interactions at 40 GeV/c (π^-p $\rightarrow$ Λ anti Λ n reaction), 8:19083 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.
Complex reactor cell calculation by means of consecutive use of the one-dimensional algorithms based on the DSub(n)-method, 8:17834 (R;SU;In Russian)
GRUKON software package. Part 1. Data processing code, 8:19227 (R;SU;In Russian)
MMK 22p code for calculating the neutron flux by the Monte-Carlo method in the subgroup approximation, 8:19226 (R;SU;In Russian)

ROM-78 computer code: Calculation of cross-sections of elastic scattering of particles on nuclei in the framework of the optical model, 8:19197 (R;SU;In Russian)
Study on the (p,n) reaction on the molybdenum isotopes, 8:19169 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij
HPD application for film processing from the BEBC bubble chamber at IHEP, 8:18525 (R;SU;In Russian)
Methods and means for diagnostics in the bubble chamber picture measurement system for HPD IHEP, 8:18526 (R;SU;In Russian)

GPU Nuclear Corp., Parsippany, NJ (USA)
TMI-2 quick look examination, 8:17926 (R;US)

Grainger Labs., Inc., Raleigh, NC (USA)
Validation of a method to measure polychlorinated biphenyls in natural gas pipelines. Final report, 8:17290 (R;US)

Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules
Charmonium spectroscopy at the CERN ISR using an antiproton beam and a hydrogen jet target, 8:19093 (R;FR)
Deep inelastic scattering, 8:19092 (R;FR;In French)
Toponium at hadronic colliders, 8:19106 (R;FR)

Grenoble-1 Univ., 38 (France)
Cyclotron production of molecules labelled with short-lived radioisotopes β^+ emitters (^{15}O, ^{13}N, ^{11}C) and their clinical uses, 8:18377 (R;FR;In French)

Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires
Cyclotron production of molecules labelled with short-lived radioisotopes β^+ emitters (^{15}O, ^{13}N, ^{11}C) and their clinical uses, 8:18377 (R;FR;In French)
E3 transition connecting two high-spin states in ^{60}Ni, 8:19164 (R;FR)
Elastic and inelastic scattering of heavy ions at intermediate energies, 8:19152 (R;FR)
Energy transfer in deeply inelastic collisions with ^{20}Ne at 151 MeV, 8:19156 (R;FR)
Simple parametrization of nuclear deformation parameters for nuclei in the actinide region, 8:19193 (R;FR)

Guam Univ., Agana. Water and Energy Research Inst. of the Western Pacific
Assessment of low head, micro hydroelectric equipment for use on small tropical islands. Technical report, 8:17523 (R;US)

Gulf South Research Inst., New Orleans, LA (USA)
Components identified in energy-related wastes and effluents. Final report Nov 76-Nov 79, 8:18754 (R;US)

H

Hahn-Jackson-Thresher-Henning, Inc., Evansville, IN (USA)
Feasibility of night-sky radiation with heat pumps, 8:17659 (R;US)
Solar-assisted water-source heat pump. Final report, 8:17660 (R;US)

Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)
Graphical metafile Bilderbuch (picture book), 8:19374 (R;DE;GE)

Hamburg Univ. (Germany, F.R.). Fachbereich Chemie
Theoretical and experimental investigations on the heat transport from free water surfaces, 8:18740 (R;DE;In German)

Hanford Engineering Development Lab., Richland, WA (USA)
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8:17803 (R;US)
Transition control system for procedure prompting, 8:17902 (R;US)
TREAT hodoscope interpretation. I. Magnitude of self-shielding corrections, 8:17942 (R;US)
TREAT hodoscope interpretation. II. Fuel-state identification, 8:17943 (R;US)
USNRC anchor bolt study data survey and dynamic testing. Final report, 8:18460 (R;US)

Hanford Environmental Health Foundation, Richland, WA (USA)
United States Transuranium Registry summary report, July 1, 1974 to October 1, 1975 to ERDA Division of Biomedical and Environmental Research, 8:18859 (R;US)

Hannover Univ. (Germany, F.R.)
Transonic flow in the bladed diffusers of radial compressors, 8:18405 (R;DE;In German)

Hannover Univ. (Germany, F.R.). Fakultaet fuer Maschinenwesen
Thermo- and fluiddynamical behaviour of loop systems under pressure relief, 8:17760 (R;DE;In German)

Harmon Engineering and Testing, Auburn, AL (USA)
A study to evaluate carbon monoxide and hydrogen sulfide continuous emission monitors at an oil refinery. Final report, 8:18613 (R;US)

Harry Diamond Labs., Washington, DC (USA)
Aurora flash x-ray facility as a source-region emp simulator, 8:18572 (R;US)

Hawaii Univ., Honolulu (USA). Dept. of Meteorology
Project Ahupua'a: solar meteorological field measurements on the Island of Hawaii, Summer 1978. 5. Southern flank of Mauna Loa, 8:17746 (R;US)

Hawaii Univ., Honolulu (USA). Hawaii Inst. of Geophysics
Geophysical reconnaissance of prospective geothermal areas on the Island of Hawaii using electrical methods, 8:17703 (R;US)

Hazleton Labs. America, Inc., Vienna, VA
Toxicity studies on antiradiation agents. Final report, 8:18956 (R;US)

Hazleton Labs., Vienna, VA (USA)
Chronic inhalation exposure of rats, rabbits, and monkeys to 1,2,4-trichlorobenzene, 8:18976 (R;US)

Heriot-Watt Univ., Edinburgh (UK)
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh, 8:18426 (R;GB)

High Wind Association, Inc., Milwaukee, WI (USA)
Wisconsin Bioshelter Demonstration Project. Final report, 8:17658 (R;US)

Hitachi Shipbuilding and Engineering Co. Ltd., Tokyo (Japan)
Hitachi zosen nox flue gas treatment process. volume 1. pilot plant evaluation. Final report may 78-feb 82, 8:17774 (R;US)

Hittman Associates, Inc., Columbia, MD (USA)
Applicability of the residential energy consumption analyses to various geographic areas, 8:18163 (R;US)

Honeywell, Inc., Minneapolis, MN (USA). Energy Resources Center
Solar Pilot Plant Phase I, detailed design report: collector subsystem research experiment. CDRL Item No. 6 (Approved), 8:17638 (R;US)

Horn Point Environmental Lab., Cambridge, MD (USA)
Estuarine community dynamics in relation to power plant operations: benthic process program. Final report, 8:18788 (R;US)

Houston Univ., TX (USA). Dept. of Mechanical Engineering
Analysis, design, fabrication, and testing of moderately concentrating solar-energy collectors. Final report, June 1976-December 1979, 8:17680 (R;US)

Howard Univ., Washington, DC (USA). Dept. of Chemistry
Laser irradiation of SV40 DNA. Technical report, 8:18991 (R;US)

Hughes Aircraft Co., Torrance, CA (USA). Torrance Research Center
Controlled atmosphere annealing of ion implanted gallium arsenide. Final report 1 Jul 76-30 Nov 79, 8:18298 (R;US)

Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics
Single exponential fitting of pulse excited decay curves distorted by an instrument function, 8:19376 (R;HU;HU)
Small angle neutron scattering study of metallic alloys by a double crystal device, 8:19239 (R;HU)

I

ICF, Inc., Washington, DC (USA)
Legal issues related to creation, banking and use of emission reduction credits (ERCS). Part I: the 'taking' issue - is compensation required if a state or local government confiscates or reduces the quantity of banked ERCS? Final report, 8:18018 (R;US)

Idaho National Engineering Lab., Idaho Falls (USA)
Dispersion in fracture networks, 8:17717 (R;US)

Response of RRGI 6 and RRGI 7 to injection during the 5-MW plant operations, March 25 to June 15, 1982, at Raft River, Idaho, 8:17707 (R;US)
Screening levels for radionuclides in soil: application to decontamination and decommissioning (D and D) criteria, 8:18719 (R;US)
Summary and results of the comprehensive environmental monitoring program at the INEL's Raft River geothermal site, 8:17708 (R;US)

Ifo-Institut fuer Wirtschaftsforschung, Muenchen (Germany, F.R.)
Environmental protection and sectoral structural changes, 8:18796 (R;DE;In German)

IIT Research Inst., Chicago, IL (USA)
Damage functions for upgraded shelters. Final report 15 Sep 80-20 Aug 81, 8:19397 (R;US)

Illinois Dept. of Energy and Natural Resources, Springfield (USA)
Illinois energy production statistical report 1960-1979, 8:18074 (R;US)

Illinois Inst. of Natural Resources, Champaign (USA). State Geological Survey Div.
Forms and volatilities of trace and minor elements in coal. I. A comparison of three pyrolysis units. II. Feasibility of a graphite trapping system. Environmental geology notes, 8:17061 (R;US)

Illinois Inst. of Tech., Chicago (USA)
Diffusion mechanisms and degradation of environmentally sensitive composite materials. July 1, 1977 - June 30, 1982. Final report, 8:18290 (R;US)

Illinois Inst. of Tech., Chicago (USA). Dept. of Chemistry
Studies of combustion kinetics and mechanisms. Progress report, January 1, 1982-December 31, 1982, 8:18386 (R;US)

Illinois Inst. of Tech., Chicago (USA). Dept. of Mechanical Engineering
Feasibility case study concerning refuse-burning modular incineration with cogeneration in Chicago. Energy management memorandum TM-82-3, 8:18204 (R;US)
Feasibility of cogeneration for a single process industry. Energy management memorandum TM-82-5, 8:18187 (R;US)
Feasibility of cogeneration retrofit for Illinois Center, 8:18186 (R;US)
Thermal-economic analysis of organic Rankine combined cycle cogeneration. ITT Energy management report TR-82-3, 8:17751 (R;US)

Illinois Legislative Council, Springfield (USA)
Science: issues in Illinois (reprints of science columns from Illinois Issues, February 1980-May 1981), 8:18020 (R;US)
Science research annual, volume II: a collection of science staff memoranda and letters from the Illinois Legislature Council - January-June 1980. Annual report Jan 80-Sep 81, 8:18019 (R;US)

Illinois Univ., Chicago (USA)
Effect of SO_2 on light modulation of plant metabolism. Progress report, June 1, 1982-May 31, 1983, 8:18824 (R;US)

Illinois Univ., Urbana (USA)
Time-series analysis for identification of particle-emission sources, 8:18589 (R;US)

Illinois Univ., Urbana (USA). Dept. of Aeronautical and Astronautical Engineering
Flame acceleration mechanisms under conditions of partial confinement. Annual report Feb 81-Jan 82, 8:18389 (R;US)

Illinois Univ., Urbana (USA). Dept. of Mechanical and Industrial Engineering
Residential and commercial cogeneration systems assessment. Final report mar 81-feb 82, 8:17764 (R;US)

Illinois Univ., Urbana (USA). Dept. of Physics
Illinois I/O Register to FASTBUS Interface, 8:19368 (R;US)

Illinois Univ., Urbana (USA). Fusion Studies Lab.
Effects of nuclear elastic scattering and modifications of ion-electron equilibration power on advanced-fuel burns, 8:19329 (R;US)

Imperial Coll. of Science and Technology, London (UK)
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes, 8:17944 (R;GB)
A general purpose computer program for multidimensional one and two phase flow, 8:18454 (R;GB)
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor, 8:17294 (R;GB)
Studying electron distributions using the time-resolved free-bound spectra from coronal plasmas, 8:19347 (R;US)

IMPRESSION 5 Museum, Lansing, MI (USA)
Vertical solar collector. Final report, 8:17661 (R;US)

Indiana State Univ., Evansville (USA)
Feasibility of night-sky radiation with heat pumps, 8:17659 (R;US)

Indian Inst. of Management, Bangalore
Draught animal power as a source of renewable energy, 8:18121 (R;US)

Institut de Recherche de l'Hydro-Quebec, Varennes (Canada)
Bipolar HVDC transmission-system study between +- 600 kV and +- 1200 kV: corona studies, Phase II, 8:17781 (R;US)

Institute of Ecology, Indianapolis, IN (USA)
Crop and forest losses due to current and projected emissions from coal-fired power plants in the Ohio River Basin, 8:18733 (R;US)

Institute of Gas Technology, Chicago, IL (USA)
Coal-gasification research studies. Quarterly report, August 20-November 19, 1982, 8:17029 (R;US)
Evaluation of coal conversion catalysts. Annual report, 8:17060 (R;US)
Feedstock characteristics and preparation for peat gasification. Volume I: tasks 8, 10, 11, and 12. Final report Jul 80-Jul 81, 8:17062 (R;US)
Feedstock characteristics and preparation for peat gasification. Volume III: task 13. Final report Jul 80-Jul 81, 8:17064 (R;US)
Feedstock characteristics and preparation for peat gasification. Volume II: task 9. Final report Jul 80-Jul 81, 8:17063 (R;US)
Gasification of land-based biomass. Annual report jan-dec 81, 8:17493 (R;US)
Thermochemical hydrogen production. Volume 2: Appendix A. Cycle status summaries. Final report Jan 72-Dec 80, 8:17481 (R;US)
Thermochemical hydrogen production. Volume 4: Appendix C. Impacts of materials development for thermochemical water-splitting processes. Final report Jan 72-Dec 80, 8:17483 (R;US)
Thermochemical hydrogen production. Volume 3: Appendix B. Discussion of experimental and design work. Final report Jan 72-Dec 80, 8:17482 (R;US)
Thermochemical hydrogen production. Volume 1: Program summary. Final report Jan 72-Dec 80, 8:17480 (R;US)

Institute of Mathematical Sciences, Madras (India)
Charmed physics of the seventies, 8:19125 (R;IN)
Lectures on the Lorentz group and related topics, 8:19124 (R;IN)
Proceedings of the second conference on number theory, 8:19270 (R;US)

Institute of Occupational Medicine, Edinburgh (UK)
A study of the day-to-day variation in the composition of dust samples and of the measurement procedures required to establish the composition of the dust with requisite accuracy. Final report, 8:17133 (R;GB)
Autopsy studies of coalminers' lungs. Final report, 8:17198 (R;GB)

Institutet foer Metallforskning, Stockholm (Sweden)
Prediction of stress relaxation under multiaxial stresses. Application to the reactor pressure vessel steel A533B, 8:18268 (R;SE)

Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)
Development of conductivity probe and temperature probe for in-situ measurements in hydrological studies, 8:19005 (R;BR)
Use of electroplating technique in preparation of a source of ^{237}Np for its determination by alpha spectrometry, 8:17334 (R;BR;SP)

Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)
I-V characterization of solar cells, 8:17546 (R;BR;In several languages)
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data, 8:18781 (R;BR;In several languages)
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat, 8:17682 (R;BR;In several languages)
Three dimensional numerical model for estimation of pollutant concentration, 8:18606 (R;BR;In several languages)

Institutul Central de Fizica, Bucharest (Romania)
Alpha-decay half-lives of neutron-deficient trans-tin isotopes, 8:19175 (R;RO)
Simple and efficient method for determination of resonance parameters by Pade approximants, 8:19103 (R;RO)

Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)
Some classes of test functions for local fields, 8:19121 (R;RO)

Interagency Task Force on Acid Precipitation, Washington, DC (USA)
Interagency task force on acid precipitation: first annual report to the President and the Congress of the United States, 8:18664 (R;US)
National Acid Precipitation Assessment Plan, 8:18667 (R;US)
Intermountain Technologies, Inc., Idaho Falls, ID (USA)
Application of RELAP5/MOD1 for calculation of safety and relief valve discharge piping hydrodynamic loads. Final report, 8:17821 (R;US)
International Center for Living Aquatic Resources Management, Manila (Philippines)
Alternative energy sources in fisheries and aquaculture; management of tropical fisheries, and aquaranching: ICLARM newsletter, volume 4, numbers 2-4. Report for Apr-Oct 81, 8:18123 (R;US)
International Harvester Co., Fort Wayne, IN (USA). Truck Engineering Center
Application for certification 1982 model year heavy-duty engines - International Harvester, 8:18227 (R;US)
International Inst. for Applied Systems Analysis, Laxenburg (Austria)
Evolution of future energy demands till 2030 in different world regions: an assessment made for the two IIASA scenarios, 8:18057 (R;US)
Life on a warmer earth: possible climatic consequences of man made global warming, 8:18702 (R;AT)
Operational water quality management: beyond planning and design, 8:18745 (R;AT)
International Lake Erie Regulation Study Board (USA)
Lake Erie water level study. Appendix E. Power. Final report, 8:17519 (R;US)
Lake Erie water level study. Appendix E. Power. Annex D. Computer programs. Final report, 8:17520 (R;US)
Lake Erie water level study. Appendix G. Recreational beaches and boating. Final report, 8:18790 (R;US)
Lake Erie water level study. Appendix H. Public information program. Final report, 8:18014 (R;US)
Inveresk Research International Ltd., Musselburgh (UK)
Tier II mutagenic screening of 13 NIOSH priority compounds, individual compound report 2-methoxyethanol, 8:18982 (R;US)
Iowa State Univ. of Science and Technology, Ames (USA). Heat Transfer Lab.
Energy conservation via heat-transfer enhancement. Final report, 8:18192 (R;US)
Istituto Nazionale di Fisica Nucleare, Legnaro (Italy). Lab. Nazionale di Legnaro
Tabulation of heavy-ion stopping powers for gas detectors, 8:18527 (R;IT)
Isuzu Motors Ltd., Southfield, MI (USA)
Application for certification 1982 model year heavy-duty engines - isuzu, 8:18228 (R;US)
Application for certification 1982 model year light-duty vehicles - Isuzu, 8:18223 (R;US)
IT-Enviroscience, Knoxville, TN (USA)
Control of sulfur emissions from oil shale retorts. Final report Jul 79-Jul 80, 8:17306 (R;US)
IWG Corp., San Diego, CA (USA)
Health and environmental effects document for oil shale - 1982, 8:17305 (R;US)

SHALO: a simple theoretical description of drainage flow, 8:17709 (R;US)
TMI-2 fission-product elemental and isotopic inventories, 8:17840 (R;US)
Toxicological study of the high explosive formulation X-0298, 8:18966 (R;US)

Louisiana Geological Survey, Baton Rouge (USA)
Physical properties of reservoir fluids. Final report 1 Feb 80-31 Aug 81, 8:17260 (R;US)

Louisiana State Univ., Baton Rouge (USA). Dept. of Physics and Astronomy
Structure of nuclei far from beta stability. Progress report, May 15, 1982-May 14, 1983, 8:19181 (R;US)

Louisiana State Univ., Baton Rouge (USA). Inst. for Environmental Studies
Investigation of the utility of Gulf Coast salt domes for the storage or disposal of radioactive wastes, 8:17361 (R;US)
Quaternary geology of Rayburn's salt dome: North Louisiana Salt Dome Basin, 8:19007 (R;US)

Louisiana Water Resources Research Inst., Baton Rouge (USA)
Use of twin wells and water-source heat pumps for energy conservation in Louisiana, 8:18151 (R;US)

Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst.
Cytogenetic studies of lung cells following inhalation of fly ash, chemical mutagens, and effluents from power-related industry, 8:18969 (R;US)
Lung-clearance mechanisms following inhalation of acid sulfates, 8:18968 (R;US)
Pulmonary effects of acid sulfate inhalation in the guinea pig, 8:18967 (R;US)
Respiratory toxicology following inhalation of NO/sub x/, 8:18970 (R;US)

Lund Inst. of Tech. (Sweden). Dept. of Mathematical Physics
Theoretical aspects of high-spin states, 8:19196 (R;US)
Lund Univ. (Sweden). Fysiska Institutionen
Light particle production in ^{12}C induced reactions at Cern SC Energies, 8:19174 (R;SE)
Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire
Lepton and quark generations in the geometrical Rishon model, 8:19107 (R;FR)

M

Macawber Engineering, Inc., Maryville, TN (USA)
Pneumatic dense-phase shipboard coal and ash conveying storage and bunkering systems for coal-fired ships (technical application manual). Final report Mar 81-May 82, 8:17177 (R;US)
Mack Trucks, Inc., Hagerstown, MD (USA)
Application for certification 1982 model year heavy-duty engines - Mack Trucks, inc, 8:18229 (R;US)
Madison Consulting Group, WI (USA)
The economic theory of enhanced natural gas service to the industrial sector: an applied approach. Final report, 8:17273 (R;US)
Maine Dept. of Conservation, Augusta (USA). Maine Geological Survey
Consultation and concurrence for NWTS in crystalline rocks. Quarterly progress report, October 1, 1982-December 31, 1982, 8:17362 (R;US)
Mainz Univ. (Germany, F.R.). Medizinische Fakultaet
Determination of the radioimmunologic concentration of 5-androstene-3β-17β-diole in the blood plasma of patients suffering from common psoriasis, 8:18832 (R;DE;In German)
Marburg Univ. (Germany, F.R.). Fachbereich Physikalische Chemie
Neutron diffraction structure investigations for expanded liquid selenium up to 1400°C and 300 bar, 8:18302 (R;DE;In German)
Martin Marietta Corp., Baltimore, MD (USA). Environmental Center
Stack plume interaction and flow characteristics for a notched ridge. Final report, 8:18616 (R;US)
The Maryland Power Plant Siting Program (PPSP) air quality model user's guide. Final report, 8:18644 (R;US)
Martin Marietta Labs., Baltimore, MD (USA)
Study of the mechanisms of fragmentation and vibration in blasting operations. Final report, 8:17146 (R;US)
Maryland Univ., College Park (USA). Dept. of Physics and Astronomy
Adsorption on metal surfaces. Progress report, May 1, 1980-April 30, 1983, 8:19259 (R;US)
Maryland Univ., College Park (USA). Lab. for Plasma and Fusion Energy Studies
Plasma shifts of CVI Lyman lines to shorter wavelengths. Annual report, November 4, 1981-September 30, 1982, 8:19285 (R;US)
Maryland Univ., Solomons (USA). Center for Environmental and Estuarine Studies
Estuarine community dynamics in relation to power plant operations: benthic process program. Final report, 8:18788 (R;US)
Maryland Univ., Solomons (USA). Chesapeake Biological Lab.
The effect of water chlorination on the toxicity of copper to phytoplankton. Final report, 8:18981 (R;US)
Mason and Hanger-Silas Mason Co., Inc., Amarillo, TX (USA)
Computer program for powder blanding, 8:18559 (R;US)
Formulation and evaluation of RX-03-DY made from water-aminated TATB. Process development endeavor No. 101, 8:18560 (R;US)
Quantitative analysis of TATB impurities by thin layer chromatography. Process development endeavor No. 205, 8:18561 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA)
A pitch control system for large scale wind turbines, 8:17739 (R;SE)
Amine plasma modification of polyaramid filaments, 8:18292 (R;US)
Coal-gasification and tar-conversion reactions over calcium oxide. Annual progress report, August 1, 1981-October 31, 1982, 8:17026 (R;US)
Fischer-Tropsch synthesis in slurry-reactor systems. Quarterly report, November 1, 1981 to January 31, 1982, 8:17031 (R;US)
Utility spot-pricing study: Wisconsin, 8:18109 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Center for Materials Science and Engineering
Molecular-orbital basis for superconductivity in high- and low-dimensional metals. Interim technical report, 8:19261 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Chemistry
Fuel and electricity generation from illumination of inorganic interfaces. Interim technical report, 8:17540 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Nuclear Engineering
Ion-bombardment effects on the fatigue life of stainless steel under simulated fusion first-wall conditions, 8:19325 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Div. of Sponsored Research
Research on materials for high power laser windows. Final technical report 1 jun 75-31 may 77, 8:18435 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Electric Power Systems Engineering Lab.
Selective modal analysis in power systems. Final report, 8:17782 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Energy Lab.
Controlled nucleation and growth process for large-grained polycrystalline-silicon photovoltaics. Final report, 8:17563 (R;US)
Review of the Energy Productivity Center's least-cost energy-strategy study. Interim report, 8:18856 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center
Design features of T-2, a torsatron reactor with continuous, demountable coils, 8:19322 (R;US)
Textor bundle divertor, 8:19323 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). Sea Grant Coll. Program
Small scale tidal power plants. part 1: performance 82-9. part 2: capital cost 82-10, 8:17729 (R;US)
Massachusetts Inst. of Tech., Lexington (USA). Lincoln Lab.
GAAS shallow-homojunction solar cells. Final report, 8:17566 (R;US)
Isolation transformers for utility-interactive photovoltaic systems, 8:17619 (R;US)
Seismic discrimination. Semiannual technical summary report 1 Apr-30 Sep 81, 8:18570 (R;US)
Massachusetts Univ., Amherst (USA). Energy Alternatives Program
Wind-turbine-blade stress analysis and natural frequencies, 8:17743 (R;US)
Materials Research Labs., Maribyrnong (Australia)
Electromagnetic launchers: background and the MRL program, 8:18575 (R;US)
Mathematical Sciences Northwest, Inc., Bellevue, WA (USA)
Design investigation of solar-powered lasers for space applications, 8:17621 (R;US)
Investigation of possibilities for solar-powered high-energy lasers in space, 8:17668 (R;US)
Space laser power transmission, 8:17788 (R;US)
Max-Planck-Institut fuer Stroemungsforschung, Goettingen (Germany, F.R.)
Experimental investigations of gas transport systems, 8:18380 (R;DE;GE)
Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/s, 2/super 3/s) state with Ar in the thermal energy range, 8:19069 (R;DE;In German)
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow, 8:19072 (R;DE;In German)
Kinetic investigations of the reactions of ufg in the gaseous phase, 8:18335 (R;DE;In German)
Measurement of the differential scattering cross sections of electron excited sodium by argon, 8:19068 (R;DE;In German)
McDonnell Douglas Astronautics Co., Huntington Beach, CA (USA)
Electric fields in earth orbital space. Annual report, 8:19045 (R;US)
10-MWe solar-thermal central-receiver pilot plant, solar-facilities design integration: plant maintenance/training manual (RADL

Item 2-37). Section 5. Process instrumentation, Book 1 of 2, 8:17646 (R;US)
10-MWe solar-thermal central-receiver pilot plant, solar-facilities design integration: plant maintenance/training manual (RADL Item 2-37). Section 3. Electrical apparatus, 8:17641 (R;US)

McDonnell Douglas Corp., St. Louis, MO (USA)
The NASA standard 20 ampere hour nickel-cadmium battery manual, 8:17976 (R;US)

McDonnell Douglas Research Labs., St. Louis, MO (USA)
Short-pulse electron-beam propagation experiments in a controlled-environment chamber. Final technical report 8 jun 81-8 mar 82, 8:19205 (R;US)

McGill Univ., Montreal, Quebec (Canada)
Fast processor for dilepton triggers, 8:18524 (R;US)

McRae (Gregory J.), Pasadena, CA (USA)
Source-receptor reconciliation of South Coast Air Basin particulate air quality data. Final report Jul 79-Jan 81, 8:18672 (R;US)

Medizinische Hochschule Luebeck (Germany, F.R.). Klinik fuer Paediatrie
Autoradiographic investigations on the prednisolone-induced atrophy and on interdependent reactions in different lymphatic tissues of rabbit, 8:18819 (R;DE;In German)

Mercedes-Benz of North America, Inc., Montvale, NJ
Application for certification 1982 model year heavy-duty diesel engines - Mercedes-Benz, 8:18230 (R;US)

Messerschmitt-Boelkow-Blohm G.m.b.H., Muenchen (Germany, F.R.)
Technological activities for high performance receivers, 8:17645 (TG;US)

Metropolitan Life, New York (USA). Corporate System Planning
Methodology for view integration in logical database design, 8:19363 (R;US)

Miami Univ., Coral Gables, FL (USA). Dept. of Mechanical Engineering
Characterization and environmental studies on anaerobic digestion of solid wastes. Progress report, February 1, 1982-July 31, 1982, 8:18205 (R;US)
Verification and transfer of thermal pollution model. Volume I: verification of three-dimensional free-surface model. Final report Mar 78-Sep 80, 8:18783 (R;US)
Verification and transfer of thermal pollution model. Volume III: verification of three-dimensional rigid-lid model. Final report Mar 78-Sep 80, 8:18785 (R;US)
Verification and transfer of thermal pollution model. Volume V: verification of one-dimensional numerical model. Final report Mar 78-Sep 80, 8:18786 (R;US)
Verification and transfer of thermal pollution model. Volume VI: user's manual for one-dimensional numerical model. Final report Mar 78-Sep 80, 8:18787 (R;US)
Verification and transfer of thermal pollution model. Volume II: user's manual for three-dimensional free-surface model. Final report Mar 78-Sep 80, 8:18784 (R;US)

Michigan Dept. of Commerce, Lansing (USA)
Hazardous waste management in the great lakes region: opportunities for economic development and resource recovery, 8:18674 (R;US)

Michigan Dept. of Public Health, Lansing (USA). Div. of Radiological Health
Transportation of radioactive material in Michigan. Final report Sep 80-Aug 81, 8:19001 (R;US)

Michigan State Univ., East Lansing (USA)
The utility of administrative diagnostic x rays. Final report, 8:18839 (R;US)

Michigan State Univ., East Lansing (USA). Carcinogenesis Lab.
Human epithellial cell activation systems. Final report, 8:18984 (R;US)

Michigan Univ., Ann Arbor (USA). School of Natural Resources
Impact of a once through cooling system on the yellow perch stock in the western basin of lake erie, 8:18792 (R;US)

Middle Tennessee State Univ., Murfreesboro (USA)
Field experiences underscore the importance of moisture control in energy-efficient homes, 8:18164 (R;US)

Mine Safety Appliances Co., Pittsburgh, PA (USA)
Feasibility study of coal dust measurement by light reflectance photometry. Open file report 20 Aug 79-20 May 81, 8:17089 (R;US)

Mine Subsidence Engineering Co., Morrison, CO (USA)
Characterization of subsidence over multiple-lift longwall panels. Final technical report, 8:17147 (R;US)

Ministerium des Innern und fuer Sport Rheinland-Pfalz, Mainz (Germany, F.R.)
Report of experiences by practicing emergency provisions around Biblis reactor in May 3, 1980, 8:18017 (R;DE;In German)

Ministerium fuer Wirtschaft und Verkehr des Landes Schleswig-Holstein, Kiel (Germany, F.R.)
Programme of the administration of the Land of Schleswig-Holstein for careful and economic use of energy, 8:18049 (R;DE;In German)

Minnesota Univ., Crookston (USA)
Comparison of inorganics in three low-rank coals, 8:17084 (R;US)

Minnesota Univ., Minneapolis (USA)
Contribution of electronically excited states to the radiation chemistry of organic systems. Informal technical progress report, December 1, 1981-January 31, 1983, 8:18365 (R;US)

Minnesota Univ., Minneapolis (USA). Dept. of Civil and Mineral Engineering
Development and implementation of dynamic methodologies for evaluating energy conservation strategies. Final report aug 80-sep 81, 8:18173 (R;US)
Development and implementation of dynamic methodologies for evaluating energy conservation strategies - executive summary. Final report aug 80-sep 81, 8:18174 (R;US)

Mission Research Corp., Albuquerque, NM (USA)
Modified betatron stability calculations. Interim report, 8:18487 (R;US)

Mission Research Corp., Alexandria, VA (USA)
Nonuniformities in laser-ablated plasma, 8:19336 (R;US)

Mississippi State Univ., Mississippi State (USA)
Application of remote sensing to state and regional problems, 8:18730 (R;US)

Missouri Dept. of Natural Resources, Jefferson City (USA)
Project reinforcement: an experiment of behavioral change strategy in state government energy programs, 8:18213 (R;US)

Missouri Water Resources Research Center, Columbia (USA)
Characterization, renovation, and utilization of water from slurry transport systems. Completion report 1 Oct 79-30 Sep 81, 8:17108 (R;US)

Mitre Corp., McLean, VA (USA). METREK Div.
Energy and development in Central America. Volume I: regional assessment, 8:17991 (R;US)
Energy and development in Central America. Volume II. country assesments, 8:17992 (R;US)

Mitsubishi Motors Corp., Tokyo (Japan)
Application for certification 1982 model year heavy-duty diesel engines - Mitsubishi, 8:18231 (R;US)

Mobil Research and Development Corp., Paulsboro, NJ (USA)
Slurry Fischer-Tropsch/Mobil two-stage process of converting syngas to high-octane gasoline. Quarterly report, 1 April-30 June 1982, 8:17490 (R;US)

Monsanto Research Corp., Miamisburg, OH (USA). Mound
Laser marking of component parts, 8:18402 (R;US)
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8:18319 (R;US)

Montana Applied Research Group, Butte (USA)
Investigation of Great Basin big sagebrush and black greasewood as biogeochemical indicators of uranium mineralization. Final report. National Uranium Resource Evaluation, 8:19021 (R;US)

Montana Coll. of Mineral Science and Technology, Butte (USA)
Geophysical investigation of the Warm Springs, Montana area, 8:17702 (R;US)

Montana Univ., Missoula (USA). Wood Chemistry Lab.
Kinetic studies of wood gasification. Final report Jan 81-Apr 82, 8:17491 (R;US)

Montpellier-2 Univ., 34 (France). Dept. de Physique Mathematique
Large-order expansion for the anharmonic oscillators, 8:19274 (R;FR)
Some properties of Borel summable functions, 8:19272 (R;FR)
Water waves produced by ground motions, 8:19273 (R;FR)

Montreal Engineering Co. Ltd., Toronto, Ontario (Canada)
Chairman's address. World energy needs and supply, 8:18051 (R;CA)

Moskovskij Inzhenerno-Fizicheskij Inst. (USSR)
Combined use of uranium and plutonium in large fast reactors, 8:17858 (TG;GB)

Motor Industry Research Association, Nuneaton (UK)
Assessment of proprietary devices for reducing the aerodynamic drag of commercial vehicles, 8:18221 (R;US)
Development of quiet low back pressure exhaust silencers on two saloon cars using a performance prediction computer program. Final report, 8:18129 (R;US)
Effect of combustion-chamber/fuel combination on high-speed knock. Final report, 8:18219 (R;US)
Investigation of gasoline engine warm-up emissions. Final report, 8:18237 (R;US)
The effect of add-on devices and engine treatment on fuel consumption. Final report, 8:18220 (R;US)
Mountain Fuel Supply Co., Salt Lake City, UT (USA)
Resource evaluation and production research on tight sands in the Pinedale unit, Sublette County, Wyoming. Final report sep 80-dec 81, 8:17282 (R;US)
Mountain States Research and Development, Tucson, AZ (USA)
Inventory of waste embankments of surface and underground openings: metal/nonmetal active mines. Open file report 30 Sep 79-20 Jul 81, 8:18197 (R;US)
Mountain West Research, Inc., Tempe, AZ (USA)
Socioeconomic impacts of nuclear generating stations: Arkansas Nuclear One station case study. Technical report 1 Oct 78-4 Jan 82, 8:17872 (R;US)
Socioeconomic impacts of nuclear generating stations: Calver Cliffs case study. Technical report 1 Oct 78-4 Jan 82, 8:17873 (R;US)
Socioeconomic impacts of nuclear generating stations: D. C. Cook case study. Technical report 1 Oct 78-4 Jan 82, 8:17875 (R;US)
Socioeconomic impacts of nuclear generating stations: Crystal River Unit 3 case study. Technical report 1 Oct 78-4 Jan 82, 8:17874 (R;US)
Socioeconomic impacts of nuclear generating stations: Nine Mile Point and Fitzpatrick case study. Technical report 1 Oct 78-4 Jan 82, 8:17877 (R;US)
Socioeconomic impacts of nuclear generating stations: Oconee case study. Technical report 1 Oct 78-4 Jan 82, 8:17878 (R;US)
Socioeconomic impacts of nuclear generating stations - Diablo Canyon case study. Technical report for 1 Oct 78-4 Jan 82, 8:17876 (R;US)
Socioeconomic impacts of nuclear generating stations: Rancho Seco case study. Technical report 1 Oct 78-4 Jan 82, 8:17880 (R;US)
Socioeconomic impacts of nuclear generating stations: Peach Bottom case study. Technical report 1 Oct 78-4 Jan 82, 8:17879 (R;US)
Socioeconomic impacts of nuclear generating stations: St. lucie case study. Technical report 1 Oct 78-4 Jan 82, 8:17881 (R;US)
Socioeconomic impacts of nuclear generating stations: Surry case study. Technical report 1 Oct 78-4 Jan 82, 8:17882 (R;US)
Socioeconomic impacts of nuclear generating stations: Three Mile Island case study. Technical report 1 Oct 78-4 Jan 82, 8:17883 (R;US)
Sociological impacts of nuclear generating stations - summary report on the NRC post-licensing studies. Final report 1 Oct 78-4 Jan 82, 8:17884 (R;US)
MPR Associates, Inc., Washington, DC (USA)
PWR safety and relief valve test program. Valve selection/ juftification report. Final report, 8:17817 (R;US)
TMI-2 quick look examination, 8:17926 (R;US)
Muenchen Univ. (Germany, F.R.). Fachbereich Medizin
Twelve years nuclear medicine - results and outlook - illustrated by 7414 cerebral scintigrams, 8:18833 (R;DE;In German)
Muenchen Univ. (Germany, F.R.). Inst. fuer Medizinische Mikrobiologie, Infektions- und Seuchenmedizin
Experimental study of the occurence and properties of C-type retroviruses in radiation-induced osteosarcomas in mice, 8:18858 (R;DE;In German)
Municipality of Metropolitan Seattle-METRO, WA (USA)
Transportation energy contingency planning: a guide for transit operators, 8:18053 (R;US)

Solar-geophysical data number 457, September 1982. Part 2 (comprehensive reports). Data for March 1982, May 1980 and miscellanea, 8:19038 (R;US)
National Inst. for Occupational Safety and Health, Cincinnati, OH (USA)
Third annual report of health activities under the Federal Mine Safety and Health Act of 1977, 8:18983 (R;US)
National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Div. of Surveillance, Hazard Evaluation and Field Studies
Supplement to the NIOSH certified equipment list, October 1, 1981. Technical report, 8:19003 (R;US)
Survey report on rf radiation exposures from heat sealers at Beaverite Products, Inc., Beaver Falls, New York. Industrywide study, 8:18993 (R;US)
National Inst. for Transport and Road Research, Pretoria (South Africa)
Energy in road transportation. Technical report, 8:18177 (R;US)
National Lab. for High Energy Physics, Oho, Ibaraki (Japan)
Neutrino-electron scattering. Progress report, 8:19074 (R;US)
National Maritime Inst., Feltham (UK)
Wind effects on offshore platforms - a summary of wind tunnel studies, 8:17216 (R;US)
National Measurement Lab. (NBS), Washington, DC (USA)
NBS Reactor: Summary of activities July 1980 through June 1981, 8:17914 (R;US)
National Nuclear Data Center, Upton, NY (USA)
Standardization of data for basic and applied nuclear physics, 8:19131 (R;US)
National Oceanic and Atmospheric Administration, Boulder, CO (USA). Office of Marine Pollution Assessment
The IXTOC I oil spill: the Federal Scientific Response. Special report, 8:18758 (R;US)
National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.
A summary of solar 1-8a measurements from the SMS and GOES satellites, 1977-1981, 8:19036 (R;US)
Cross-correlations between monthly averages of solar-interplanetary indices fom 1971 to 1978. Technical memo, 8:19033 (R;US)
Modelling of total electron content measured by the ATS-6 radio beacon experiment. Technical memo, 8:19048 (R;US)
National Oceanic and Atmospheric Administration, Miami, FL (USA). Atlantic Oceanographic and Meteorological Labs.
Ocean optical data from potential OTEC sites in the Gulf of Mexico. Technical memo, 8:17648 (R;US)
Physical oceanographic observations in the eastern Gulf of Mexico during 1979-1980 for a potential OTEC site. Technical memo, 8:17647 (R;US)
National Oceanic and Atmospheric Administration, Seattle, WA (USA). Pacific Marine Environmental Lab.
Processes affecting the distribution of low-molecular-weight aliphatic hydrocarbons in Cook Inlet, Alaska. Technical memo, 8:18761 (R;US)
Surface and upper-air observations in the eastern Bering Sea, February and March 1981. Technical memo, 8:18594 (R;US)
National Oceanic and Atmospheric Administration, Silver Spring, MD (USA). Air Resources Lab.
User's guide for a long-range multi-layer atmospheric transport and dispersion model. Technical memo, 8:18663 (R;US)
National Research Council, Washington, DC (USA). Advisory Board on Military Personnel Supplies
Advisory Committee on Military Personnel Supplies periodic report: Committee on Environmental Sciences and Resources. Final report, 8:18815 (R;US)
Nauchno-Issledovatel'skij Inst. Atomnykh Reaktorov, Dimitrovgrad (USSR)
Radiation damage in refractory metals and alloys on their base, 8:18265 (R;SU;In Russian)
Naval Air Development Center, Warminster, PA (USA). Aircraft and Crew Systems Technology Directorate
Survey and update of F-14a mission profiles for TF30 engine usage. Final report, 8:18165 (R;US)
Naval Civil Engineering Lab., Port Hueneme, CA (USA)
Energy Data Mobile Laboratory. Final technical note Oct 76-Sep 81, 8:18136 (R;US)
Naval Medical Research Inst., Bethesda, MD (USA)
Residual ionizing radiation depth dose measurements in unit-density material, 8:18564 (R;US)
Naval Postgraduate School, Monterey, CA (USA)
An investigation of the effects of smoke suppressant fuel additives on engine and test cell exhaust gas opacities. Final report for 1981, 8:18236 (R;US)
Hp-41CV flight performance advisory system (FPAS) for the E-2c, E-2B, and C-2A aircraft. Final technical report Apr-Jun 82, 8:18166 (R;US)
Naval Research Lab., Washington, DC (USA)
Charcoal performance under simulated accident conditions. Memorandum report, 8:18694 (R;US)
Effects of ion-acoustic instability on ligh-ion-beam transport in deuterium channels, 8:19293 (R;US)
Electron velocity shear instability in the auroral ionosphere. Memorandum report, 8:19046 (R;US)
Nonuniformities in laser-ablated plasma, 8:19336 (R;US)

One-dimensional time-dependent model for flame initiation, propagation and quenching. Memorandum report, 8:18384 (R;US)
X-ray spectroscopy to determine line coincidences, 8:18438 (R;US)

Naval Surface Weapons Center, Silver Spring, MD (USA). White Oak Lab.
Development of improved separators for alkaline zinc batteries, 8:17978 (R;US)

Naval Weapons Center, China Lake, CA (USA)
Coso monitoring program. Summary report Jan-Dec 80, 8:17693 (R;US)

Naval Weapons Support Center, Crane, IN (USA)
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells, 8:17977 (R;US)

Nevada Univ., Reno (USA). Desert Research Inst.
Community Radiation Monitoring Program annual report, January 1, 1981-November 30, 1982, 8:18695 (R;US)
Tephrostratigraphy and potassium-argon age determinations of seven volcanic ash layers in the Muddy Creek formation of southern Nevada, 8:19004 (R;US)

New Mexico Inst. of Mining and Technology, Socorro (USA). New Mexico Petroleum Recovery Research Center
Improvement of water injectivity in the Hobbs (Grayburg-San Andres) field. Final report, 8:17215 (R;US)

New Mexico Univ., Albuquerque (USA). Inst. for Modern Optics
Study of molecular collision dynamics for chemical laser systems. Final technical report 1 aug 80-31 oct 81, 8:18431 (R;US)

New Orleans Area/Bayou-River Health Systems Agency, Inc., LA (USA)
Criteria and standards: CT scanning services, 8:18831 (R;US)
Criteria and standards radiation therapy services, 8:18830 (R;US)

New Orleans Univ., LA (USA). Dept. of Chemistry
Identification and temporal behavior of radical intermediates formed during the combustion and pyrolysis of gaseous fuels: kinetic pathways to soot formation. Progress report, September 1, 1982-June 30, 1983, 8:18385 (R;US)

New Univ. of Ulster, Coleraine (UK)
Simultaneous electron capture and excitation in ion-atom collisions, 8:19053 (R;US)

New York City Dept. of Sanitation (USA)
Feasibility study for resource recovery: southwest Brooklyn incinerator. Final report, 8:17517 (R;US)

New York Univ., NY (USA). Dept. of Applied Science
Geochemical and geophysical models of the fossil-fuel CO_2 climate problem. Annual progress report, September 1981-October 1982, 8:17121 (R;US)

Norges Landbrugshoegskole, Aas. SNSF-projektet
Acid precipitation: effects on forest and fish. Final report, 8:18971 (R;NO)

North Atlantic Treaty Organization, Brussels (Belgium). Committee on the Challenges of Modern Society
Pollution atmospherique: techniques de controle des emissions d'oxyde d'azote en sources fixes (air pollution: control techniques for nitrogen oxide emissions from stationary sources), 8:18658 (R;US)

North Carolina State Univ., Raleigh (USA)
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites, 8:18291 (R;US)

North Carolina Univ., Chapel Hill (USA)
Simultaneous electron capture and excitation in ion-atom collisions, 8:19053 (R;US)

North Dakota Univ., Grand Forks (USA). Engineering Experiment Station
Disposal of fly-ash alkali FGD waste in a western decoaled strip mine. Quarterly technical progress report, June 1-August 31, 1982, 8:17122 (R;US)

Northwest Arkansas Regional Planning Commission, Springdale (USA)
Fire defense and emergency response planning resource directory. Final report, 8:19002 (R;US)

North Wind Power Co., Warren, VT (USA)
North Wind 2-kW high-reliability wind system. Phase II: fabrication and test, 8:17745 (R;US)

Nuclear Regulatory Commission, Arlington, TX (USA). Region IV
Licensee contractor and vendor inspection status report: quarterly report, April 1982-June 1982, 8:17859 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA)
NRC inventory of dams, 8:17904 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Rules and Records
NRC regulatory agenda. Quarterly report, September-December 1982, 8:17866 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Technical Information and Document Control
Nuclear Regulatory Commission issuances, March 1982, 8:17864 (R;US)
Title list of documents made publicly available, October 1-31, 1982, 8:17861 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office for Analysis and Evaluation of Operational Data
Report to Congress on abnormal occurrences, July-September 1982, 8:17860 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Inspection and Enforcement
Enforcement actions: significant actions resolved. Quarterly progress report, October-December 1982, 8:17867 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Material Safety and Safeguards
Symposium on low-level waste disposal, 8:17374 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Clarification of TMI action plan requirements. Requirements for emergency response capability, 8:17863 (R;US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), January 1-January 31, 1983, 8:17862 (R;US)
Safety evaluation report related to the operation of Catawba Nuclear Station, Units 1 and 2. Docket Nos. 50-413 and 50-414, Duke Power Company, et al., 8:17869 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
Small-Business Innovation Research Program: program solicitation FY 1983. Closing date: June 3, 1983, 8:17468 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of Resource Management
Budget estimates, fiscal year 1984/85. Appropriation: salaries and expenses, 8:17868 (R;US)
Summary information report, 8:17865 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of State Programs
Informatin report on state legislation, volume 8, number 8, 8:17467 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Office of the Executive Director for Operations
Regulatory analysis guidelines of the United States Nuclear Regulatory Commission, 8:17870 (R;US)

NUS Corp., Rockville, MD (USA)
Cost and sensitivity analysis for uranium in situ leach mining. Open file report Oct 79-Mar 81, 8:17320 (R;US)

NUS Corp., San Francisco, CA (USA). Western Engineering Operations
Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8:17842 (R;US)

NUS Corp., Sherman Oaks, CA (USA)
Study of a conceptual nuclear-energy center at Green River, Utah: site-specific transportation, 8:17807 (R;US)
Study of a conceptual nuclear-energy center at Green River, Utah: potential alternative heat-rejection systems, 8:17808 (R;US)

O

Oak Ridge Associated Universities, Inc., TN (USA)
Institute for Energy Analysis research report 1982, 8:18805 (R;US)
Theoretical aspects of high-spin states, 8:19196 (R;US)
Training Kentuckians for industrial jobs: a longitudinal study, 8:17986 (R;US)
Training Tennesseans for industrial jobs: a longitudinal study, 8:17985 (R;US)

Oak Ridge Gaseous Diffusion Plant, TN (USA)
Determination of methylmercury in fish by selective-reduction cold-vapor atomic-absorption spectrophotometry, 8:18964 (R;US)
Oak Ridge National Lab., TN (USA)
Anaerobic digestion of low-level radioactive cellulosic and animal wastes, 8:17397 (R;US)
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-dimensional and 3-dimensional crack models, 8:17804 (R;US)
Assessment of Fisher and logistic linear and quadratic discrimination models, 8:19380 (R;US)
Atomic physics processes in radial transport calculations, 8:19294 (R;US)
Bulk Shielding Facility. Quarterly report, April-June 1982, 8:17912 (R;US)
Charge states and dynamic screening of swift ions in solids, 8:19207 (R;US)
Comparison of BWR-stability measurements with calculations using the code LAPUR-IV, 8:17805 (R;US)
Constrained ripple optimization of Tokamak bundle divertors, 8:19337 (R;US)
Description of sliding-seal scattering chamber (Engineering Materials), 8:18510 (E;US)
Development of a portable field monitor for PCBs. Final report, 8:17235 (R;US)
Dynamic modeling and simulation of froth flotation and vacuum-filtratrion units, 8:17170 (R;US)
Eddy-current inspection for steam-generator tubing program. Quarterly progress report for period ending September 30, 1982, 8:17841 (R;US)
Evaluation of the Energy-Related Inventions Program. Volume 1. Analysis of case studies of supported projects, 8:18036 (R;US)
Experimental characterization of the flux-line lattice in superconducting V_3Si, 8:18247 (R;US)
Expert opinion and ranking methods, 8:19378 (R;US)
Fixed-base flywheel storage systems for electric-utility applications: an assessment of economic viability and R and D priorities, 8:17969 (R;US)
High-Temperature Gas-Cooled Reactor Safety studies for the Division of Accident Evaluation. Quarterly progress report, April 1-June 30, 1982, 8:17951 (R;US)
Licensee Event Report (LER) compilation for month of December 1982, 8:17871 (R;US)
Method for anodic oxidation of metals and their alloys, 8:18275 (TG;US)
Modification of the Purdue University physical properties package (PPROP) to allow the handling of streams containing solids, 8:19381 (R;US)
Oak Ridge National Laboratory filtering and smoothing programs, 8:19379 (R;US)
Role of financial incentives in utility-sponsored residential conservation programs: a review of customer surveys, 8:18147 (R;US)
Shallow-land burial of low-level radioactive wastes: preliminary simulations of long-term health risks, 8:17434 (R;US)
Siting field research in the western Kentucky energy development region: an exploration of a regional approach. Environmental Sciences Division, Publication No. 2089, 8:18607 (R;US)
SURE: a system of computer codes for performing sensitivity/uncertainty analyses with the RELAP code, 8:17958 (R;US)
Symposium on low-level waste disposal, 8:17374 (R;US)
Use of an overall heat-transfer coefficient to calculate performance of an evaporative cooler, 8:18196 (R;US)
Oak Ridge Y-12 Plant, TN (USA)
Environmental and in-plant measurement of acetonitrile vapors using an infrared gas analyzer, 8:18556 (R;US)
Office of Technology Assessment (U.S. Congress), Washington, DC
Increased automobile fuel efficiency and synthetic fuels: alternatives for reducing oil imports, 8:17255 (R;US)
Solar power satellites, summary, 8:17624 (R;US)
The implications of cost-effectiveness analysis of medical technology. Background paper number 2: case studies of medical technologies. Case study number 13: cardiac radionuclide imaging and cost effectiveness, 8:18838 (R;US)
Ohio River Basin Energy Study, Urbana, IL (USA)
An energy and fuel demand model for the Ohio River Basin Energy Study Region, 8:17990 (R;US)
Crop and forest losses due to current and projected emissions from coal-fired power plants in the Ohio River Basin, 8:18733 (R;US)
Impacts on human health from the coal and nuclear fuel cycles and other technologies associated with electric power generation and transmission, 8:17444 (R;US)
Ohio River Basin Energy Study: air quality and related impacts. Volume III. Selected impacts of electric utility operations in the Ohio River Basin (1976-2000): an application of the utility simulation model, 8:17772 (R;US)
Ohio River Valley Water Sanitation Commission, Cincinnati (USA)
Assessment of water quality conditions Ohio River main stem 1980-81, 8:18757 (R;US)
Ohio State Univ., Columbus (USA)
Finite-element modeling of thermo-mechanical responses associated with underground coal conversion, 8:17024 (R;US)
Ohio State Univ., Columbus (USA). Dept. of Engineering Mechanics
Structural and fracture mechanics modeling associated with underground coal conversion. Final report, April 1, 1980-June 15, 1982, 8:17025 (R;US)
Ohio State Univ., Columbus (USA). Dept. of Metallurgical Engineering
Fundamental studies of high-temperature-corrosion reactions. Technical progress report, 8:18248 (R;US)
General and localized corrosion of carbon and low-alloy steels in oxygenated high-temperature water. Final report, 8:17800 (R;US)
Ohio State Univ. Research Foundation, Columbus (USA)
Hydrogen attack of pressure-vessel steels. Annual report, June 1, 1982-May 31, 1983, 8:18249 (R;US)
Oklahoma State Univ., Stillwater (USA). Agricultural Experiment Station
Assessment of the establishment of food-energy research, development and extension centers. Final report, 8:18184 (R;US)
Oklahoma State Univ., Stillwater (USA). Dept. of Chemistry
Computer processing of mass-spectral data. Part V. Assignment of formulas to experimental masses. Representative databases for program FZM, 8:18348 (R;US)
Old Dominion Univ., Norfolk, VA (USA)
Theoretical studies of solar-pumped lasers, 8:17669 (R;US)
Ontario Hydro, Toronto (Canada)
Investigations of titamium and zirconium hydrides to determine suitability of recoverable tritium immobilization for the Pickering tritium removal system, 8:17394 (R;CA)
Oregon State Univ., Corvallis (USA)
Nuclear chemistry progress report, September 1, 1981-August 31, 1982, 8:19182 (R;US)
Oregon Univ., Eugene (USA). Inst. of Theoretical Science
Polarization structure and the weave of 16-sets, 8:19263 (R;US)
Symmetry constraints in optimal polarization formalisms with an application to p-p scattering, 8:19130 (R;US)
Organisatie voor Toegepast Natuurwetenschappelijk Onderzoek, The Hague (Netherlands)
Solid fuel from household waste (vaste brandstof uit huishoudelijk afval), 8:17516 (R;US)
Organization of Arab Petroleum Exporting Countries, Kuwait
Secretary General's sixth annual report, 1399 H, 1979 AD, 8:17227 (R;KW)
Sixth annual statistical report 1977-1978, 8:17228 (R;KW)
Oxford Univ. (UK). Nuclear Physics Lab.
Hadron production in e+e- annihilation. Final report, 8:19108 (R;US)

P

Pacific Northwest Lab., Richland, WA (USA)
Annotated bibliography of radioactive waste management publications at Pacific Northwest Laboratory, January 1978 through July 1982, 8:17401 (R;US)
Application of fisheries-management techniques to assessing impacts, 8:17906 (R;US)
Assessment method to predict the rate of unresolved false alarms, 8:17469 (R;US)

Beta and low-energy photon irradiation of several commercial phosphors, 8:18541 (R;US)
Comparison of cask and dry well concepts for retrievable storage of high-level waste, 8:17365 (R;US)
Comparison of the leachability of three TRU cement waste forms, 8:17403 (R;US)
Cost and effectiveness of radon barrier systems, 8:17449 (R;US)
Critical considerations in the assessment of health and environmental risks: what we have learned from the nuclear experience, 8:18725 (R;US)
Dual tracer measurements of plume depletion, 8:18682 (R;US)
Early results from the Battelle-Carolina ^{76}Ge double-beta-decay project, 8:19166 (R;US)
Effect of irradiation on phosphorus segregation, 8:18266 (R;US)
Emergency effluent monitoring and assessment, 8:18726 (R;US)
Enviromechanical testing of Ti-grade 2 and Ti-grade 12 in basalt ground water, 8:18267 (R;US)
Feasibility of an EIS Follow-up Program, 8:18806 (R;US)
Formation of aromatic and possible oligomeric materials from cellulose liquefaction, 8:17580 (R;US)
Glass leaching, 8:17402 (R;US)
Ground-water monitoring programs at the Hanford Site, Washington state, 8:17321 (R;US)
Health physics and industrial hygiene aspects of decontamination as a precursor to decontamination, 8:17919 (R;US)
In search of the relevant lung dose, 8:18868 (R;US)
Master schedule for CY-1983 Hanford environmental surveillance routine sampling program, 8:18697 (R;US)
Method for estimating wind characteristics at potential wind-energy-conversion sites, 8:17742 (R;US)
Modeling early events in the radiation chemistry of dilute aqueous solutions, 8:18367 (R;US)
New pollutant-dispersion model for application in mountain valleys, 8:18683 (R;US)
Nuclear air cleaning: the need for a change in emphasis, 8:18698 (R;US)
Postaccident decontamination of reactor primary systems and test loops, 8:17935 (R;US)
Preliminary study of adiabatic compressed-air energy storage in aquifers, 8:17966 (R;US)
Projection of US LWR spent fuel storage requirements, 8:17341 (R;US)
Resuspension and dry deposition research needs, 8:18684 (R;US)
Review of fugitive dust control for uranium mill tailings, 8:17393 (R;US)
State energy price system. Volume I. Overview and technical documentation, 8:17221 (R;US)
State energy price system. Volume II. Data base development, 8:17222 (R;US)
Systematic approach to designing surface covers for uranium-mill tailings, 8:17432 (R;US)
Theory of pulsed-irradiation microstructures, 8:19338 (R;US)
Track modeling by Monte Carlo techniques, 8:19247 (R;US)
Transportation risks in the US nuclear fuel cycle, 8:17448 (R;US)
Twenty-six-inch pipe NDE instrument surveillance test, 8:17801 (R;US)

Paris-6 Univ., 75 (France)
Study of the inclusive reactions in the K^-p interactions at 70 GeV/c, 8:19075 (R;FR;In French)
Study of the multimuon event production in the hadronic interactions at 150 and 280 GeV/c, 8:19095 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France)
Disorder and conductivity of organic metals, 8:18364 (R;FR;In French)
Identification of new isotopes with a time-of-flight mass spectrometer and total β^+ decay energy measurement of these nuclei in the deformation region N=Z=40, 8:19155 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
Competition between a few nucleon emission and γ-deexcitation for the system $^{66}Cu + ^{87}Rb \rightarrow ^{153}Dy^*$ at E*approximately54 MeV, 8:19162 (R;FR)
Identification of new isotopes with a time-of-flight mass spectrometer and total β^+ decay energy measurement of these nuclei in the deformation region N=Z=40, 8:19155 (R;FR;In French)
Magic features of ^{66}Ni, 8:19163 (R;FR)
NIa crystal efficiency of 7.5x7.5cm to neutrons of ^{252}Cf, 8:19192 (R;FR;In French)
Use of realistic wave functions in the coherent photoproduction on ^{3}He nuclei, 8:19137 (R;FR)

Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
New results from PETRA on fragmentation and neutral particles production, 8:19091 (R;FR)

Parsons, Brinckerhoff, Quade and Douglas, Inc., New York (USA)
Nuclear-waste repository in basalt, Project B-301: functional-design criteria, 8:17406 (R;US)

PEDCo-Environmental, Inc., Cincinnati, OH (USA)
Acid rain: control strategies for coal-fired utility boilers. Volume I, 8:17103 (R;US)
Appendix a: summary of individual comments on the may 22, 1980 proposed visibility regulations. Final report, 8:18706 (R;US)
Flue gas desulfurization costs for large coal-fired boilers (draft), 8:17116 (R;US)

Pennsylvania State Univ., University Park (USA)
DNA repair in B. subtilis: an inducible dimer-specific W-reactivation system, 8:18853 (R;US)
Structural properties of amorphous metals by Raman scattering. Progress report, June 1, 1981-May 31, 1983, 8:18250 (R;US)

Pennsylvania State Univ., University Park (USA). Dept. of Mineral Engineering
Mine power systems. Volume I. Contract research report 1 Oct 74-31 May 81, 8:17162 (R;US)
Mine power systems. Volume II. Contract research report 1 Oct 74-31 May 81, 8:17163 (R;US)

Pennsylvania State Univ., University Park (USA). Inst. for Research on Land and Water Resources
A conceptual model of primary productivity in shallow streams using biomass simulation. Technical completion report, 8:18756 (R;US)

Pennsylvania Univ., Philadelphia (USA)
Neutrino-electron scattering. Progress report, 8:19074 (R;US)
Testing the standard model, 8:19119 (R;US)

Pennsylvania Univ., Philadelphia (USA). Analysis Center for Energy Studies
Energy-assessment procedures: issues in analysis and design, 8:18139 (R;US)

Philippine Atomic Energy Commission, Diliman, Quezon City
Investigation of levels of organic pollutants in selected areas in the Philippines, 8:18749 (R;PH)
Pesticide content of human abdominal fat of Filipinos. Final report of Proj. PARC-ARC-IE 7201 Ch, 8:18321 (R;PH)
Philippine survey of public attitudes towards alternative energy systems (Pilot Study), 8:18003 (R;PH)
Studies on air and water pollution. I. Polychlorinated biphenyls and benzopyrene status report July 1977 - June 1978, 8:18320 (R;PH)
Study on students' beliefs about nuclear power, 8:18004 (R;PH)
Total mercury in water and sediment from Honda Bay area in Palawan, 8:18748 (R;PH)

Philips G.m.b.H., Bremen (Germany, F.R.). Elektro Spezial Unternehmensbereich
Development of a compact microwave spectrometer for gas analysis, based on the stark effect. Final report Oct 78-Dec 80, 8:18686 (TG;US)

Philips Labs., Briarcliff Manor, NY (USA)
Development of a novel laser material for miniaturized laser systems. Final technical report 8 nov 80-31 dec 81, 8:18432 (R;US)

Philips Research Labs., Eindhoven (Netherlands)
A study of the reactivity of vitrain cokes in relation to their optical anisotropy. Carbonization research report (final), 8:17095 (R;US)

Photowatt International, Inc., Tempe, AZ (USA)
Development of technique for AR coating and nickel and copper metallization of solar cells. Final report, 8:17544 (R;US)

Pittsburgh Univ., PA (USA)
Addition of devolatilization equations to SYNTHANE computerized mathematical model. Final report, September 15, 1978-September 14, 1979, 8:17019 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Efficiency of buffered aqueous carboxylic acid solutions and organic solvents to absorb SO_2 from industrial flue gas; solubility data from gas-liquid chromatography, 8:17770 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy
Studies of the applicability of opto-electronic devices for instrumentation in high-energy physics. Progress report, June 1, 1981-May 31, 1982, 8:18523 (R;US)

Studies of the applicability of optoelectronic devices for instrumentation in high-energy physics. Progress report, June 1, 1982-May 31, 1983, 8:19081 (R;US)

Pittsburgh Univ., PA (USA). NASA Industrial Applications Center
ARIS: Acid Rain Information System. Final project report, 8:18600 (R;US)

PLT Engineering, Inc., Houston, TX (USA)
Cost estimates for above-ground crude-oil storage with capacities of 30, 40, and 50 MM bbl, 8:17251 (R;US)

Politecnico di Milano (Italy)
Comparative performance of heat pumps vs cogeneration district-heating systems, 8:18142 (R;IT)

Power Math Associates, Inc., Tempe, AZ (USA)
Nuclear-plant response to grid electrical disturbances. Final report, 8:17936 (R;US)

Pratt and Whitney Aircraft, East Hartford, CT (USA). Commercial Products Div.
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8:17755 (R;US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8:17756 (R;US)

Princeton Univ., NJ (USA)
Interactive graphical data analysis. Annual progress report, March 25, 1982-March 24, 1983, 8:19369 (R;US)
Thoughts on the evolution of dynamic graphics, 8:19362 (R;US)

Princeton Univ., NJ (USA). Dept. of Physics
High Energy Physics Division Research Highlights, 8:19080 (R;US)
Observation of the radiative decay J/psi → γ eta ππ, 8:19097 (R;US)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Current state of magnetic-fusion energy research, 8:19340 (R;US)
Diamagnetic flux measurement using the PDX TF coils, 8:19299 (R;US)
High-energy D_2O submillimeter laser for plasma diagnostics, 8:19295 (R;US)
Lower-hybrid heating and current drive on PLT, 8:19297 (R;US)
Magnetic dipole lines in the 3s²3p/sup x/ configuration of elements from copper to molybdenum, 8:19298 (R;US)
Observation of magnetized-ion thermal effects on lower-hybrid waves, 8:19296 (R;US)
Reduction of recycling by pumping at the PDX limiter, 8:19339 (R;US)

Punjab, Haryana and Delhi Chamber of Commerce and Industry, New Delhi (India)
Steam economics: guidelines on planning, generation, and conservation, 8:17765 (R;US)

R

Radian Corp., Austin, TX (USA)
Acid rain mitigation study. Volume II. FGD cost estimates (appendices). Final report Feb 80-Feb 81, 8:17775 (R;US)
Environmental characterization of the Texaco Coal-Gasification Process at Ruhrkohle/Ruhrchemie in Oberhausen-Holten, Federal Republic of Germany. Final report, 8:17123 (R;US)
Evaluation of the maintenance effect on fugitive emmissions from refineries in the South Coast Air Quality Management District. Final report Dec 80-Sep 81, 8:17240 (R;US)
Preliminary identification of areas subject to construction bans under the Clean Air Act and analysis of related issues. Final report, 8:18063 (R;US)
Shell NO/sub x//SO_2 flue gas treatment process: independent evaluation. Final report Feb 80-Feb 82, 8:18483 (R;US)

Radian Corp., Durham, NC (USA)
Costs of sulfur dioxide, particulate matter, and nitrogen oxide controls on fossil fuel fired industrial boilers. Final report, 8:18482 (R;US)

Radiological and Chemical Technology, Inc., San Jose, CA (USA)
Monitoring system for determining air inleakage and oxygen concentrations in the secondary cycle of pressurized-water-reactor plants. Final report, 8:17833 (R;US)

RAND Corp., Santa Monica, CA (USA)
An evaluation of economists' influence on electric utility rate reforms, 8:18077 (R;US)

Range Commanders Council, White Sands Missile Range, NM (USA). Meteorological Group
A glossary of selected meteorology terms. Final report, 8:18586 (R;US)

Renault Vehicles Industriels (France). Direction des Etudes et Recherches
Energy consumption and heavy-duty vehicles, 8:18178 (TG;US)
The evolution of the industrial vehicle by the year 2000, 8:18179 (TG;US)

Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Chemistry
Molten carbonates: microwave studies of the vapor state. Progress report, June 1, 1982-May 31, 1983, 8:18131 (R;US)

Research Triangle Inst., Research Triangle Park, NC (USA)
Evaluation of batteries used in sampling pumps. Final report, 8:17979 (R;US)

Resource Engineering and Development, Inc., Midvale, UT (USA)
Analysis of groundwater criteria and recent restoration attempts after in situ uranium leaching. Open file report, 8:17430 (R;US)

Resource Planning Collaborative, Alexandria, VA (USA)
The energy connection: incorporating energy concerns in the economic development process, 8:18801 (R;US)

Resources for the Future, Inc., Washington, DC (USA)
Annual report for the year ending September 30, 1981, 8:18002 (R;US)
Issues in uranium availability, 8:17309 (R;US)

Restrepo and Associates, El Paso, TX (USA)
Ixtoc I oil spill economic impact study. Volume I. Final report, 3:17237 (R;US)
Ixtoc I oil spill economic impact study. Volume II. executive summary. Final report, 8:17238 (R;US)
Ixtoc I oil spill economic impact study. Volume III. input-output model for economic analysis: instruction manual. Final report, 8:17239 (R;US)

Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA)
Greater Confinement Disposal Test at the Nevada Test Site, 8:17358 (R;US)

Rio de Janeiro Univ. (Brazil). Coordenacao dos Programas de Pos-graduacao de Engenharia
Diffusion in Poiseuille and Couette flows of binary mixtures of incompressible newtonian fluids, 8:18457 (R;BR)
Similarity flows between a rotating and a stationary disk, 8:18456 (R;BR)

Risoe National Lab., Roskilde (Denmark)
Geostatistical study of the uranium deposit at Kvanefjeld, the Ilimaussaq intrusion, South Greenland, 8:17312 (R;DK)
Importance of deposition for individual and collective doses in connection with routine releases from nuclear power plants, 8:18699 (R;DK)
List of selected publications 1981. Risoe National Laboratory, 8:19354 (R;DK)
RISO 78: mean profile and turbulence measurements at a shoreline escarpment1, 8:18595 (R;DK)

Robbins Co., Kent, WA (USA)
Equipment for the emplacement of heat-producing waste in long horizontal boreholes, 8:17357 (R;US)

Rochester Univ., NY (USA). Dept. of Chemistry
Quantum dynamical model of laser-stimulated isotope separation of adsorbed species: role of anharmonicity, coupling strength and energy feedback from the heated substrate. Technical report, 8:17323 (R;US)
Quantum model of laser excitation of isotopic species adsorbed on a solid surface. Interim technical report, 8:18331 (R;US)

Rochester Univ., NY (USA). School of Medicine and Dentistry
DNA repair in B. subtilis: an inducible dimer-specific W-reactivation system, 8:18853 (R;US)

Rockwell International Corp., Canoga Park, CA (USA). Energy Systems Group
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8:19324 (R;US)

Rockwell International Corp., Canoga Park, CA (USA). Energy Technology Engineering Center
Final report on the testing of the Mannesmann Demag oxygen compressor, 8:18397 (R;US)

Rockwell International Corp., Cedar Rapids, IA (USA). Collins Government Avionics Div.
A communication and monitoring system for an underground coal mine, iron ore mine, and deep underground silver mine. Open file report Jun 73-Mar 78, 8:17157 (R;US)

Rockwell International Corp., Downey, CA (USA). Space Div.
Development of ambient cure polyimide foam. Open file report (final) Jan 77-May 78, 8:17156 (R;US)
Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant
Actinide chemistry research at Rocky Flats, 8:18381 (R;US)
Air-cleaning philosophy in a nuclear-materials fabrication plant, 8:17451 (R;US)
Artificial radioactivity and marine environment: study of the transuranium elements ^{239}Pu, $^{239+240}Pu$, ^{241}Pu and ^{241}Am in the Mediterranean, 8:18775 (TG;US)
Comparison of estimators of beta parameters for fitting binomial data with varying p, 8:19382 (R;US)
Discussion of "Statistical methods for nuclear-materials safeguards", 8:17470 (R;US)
Ferrite catalyst, 8:17118 (TG;US)
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8:18324 (R;US)
Long-term management USDOE transuranic waste, 8:17405 (R;US)
Overview of industries policies and practices on fertile female and ionizing radiation, 8:17450 (R;US)
Present status and future direction of plutonium process chemistry, 8:17337 (R;US)
Process for producing oxygen, 8:18326 (TG;US)
Process for treating nitrogen oxides in exhaust gases, 8:18685 (TG;US)
Process for treatment of waste gas containing nitrogen oxides, 8:17119 (TG;US)
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8:17327 (R;US)
Removal of actinides from waste solutions by ferrite treatment, 8:17404 (R;US)
Review of plutonium process chemistry at Rocky Flats, 8:17336 (R;US)
System operational testing of major ventilation systems for a plutonium recovery facility, 8:17335 (R;US)
Technical and management support for the development of small wind systems. Fiscal year 1981 annual report, October 1, 1980-September 30, 1981, 8:17744 (R;US)
Treatment agents for separation of oil and water, 8:18765 (TG;US)
Treatment agents for separation of oil and water, 8:18767 (TG;US)
Treatment agents for separation of oil and water, 8:18768 (TG;US)
Treatment agents for separation of oil and water, 8:18769 (TG;US)
Treatment agents for separation of oil and water, 8:18770 (TG;US)
Treatment agents for separation of oil and water, 8:18771 (TG;US)
Treatment agents for separation of oil and water, 8:18766 (TG;US)
Rockwell International Corp., Newbury Park, CA (USA)
Apparatus and procedure for determining oil droplet size distribution. Final report jun 78-nov 80, 8:18753 (R;US)
Quality Assurance in Support of Energy Related Monitoring Activities: annual report No. 3, 8:18636 (R;US)
Quality Assurance in Support of Energy Related Monitoring Activities. Final report, 8:18637 (R;US)
Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations
Automated data acquisition and analysis system used in the Basalt Waste Isolation Project's Near-Surface Test Facility, 8:17409 (R;US)
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8:17408 (R;US)
Control of radiolytic gases in liners of radioactive zeolites, 8:17816 (R;US)
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8:17407 (R;US)
Ground-water monitoring programs at the Hanford Site, Washington state, 8:17321 (R;US)
Nuclear-waste repository in basalt, Project B-301: functional-design criteria, 8:17406 (R;US)
Present status and future direction of plutonium process chemistry, 8:17337 (R;US)
Rockwell International Corp., Thousand Oaks, CA (USA)
Electrochemical photovoltaic cells/stabilization and optimization of II-VI semiconductors. Second technical progress report, 8:17588 (R;US)
Rockwell International Corp., Thousand Oaks, CA (USA). Science Center
Prototype EMAT system for inspection of steam generator tubing. Final report, 8:17825 (R;US)
Sintering phenomena of non-oxide silicon compounds. Technical report No. 4, January 1, 1982-December 31, 1982, 8:18279 (R;US)
Rutgers--the State Univ., Piscataway, NJ (USA). Waksman Inst. of Microbiology
Mechanisms of mutagenesis: analysis through the use of alcohol dehydrogenase in Drosophila. Progress report, February 1982-January 1983, 8:18963 (R;US)

S

Saab-Scania of America, Inc., Orange, CT
Application for certification 1982 model year light-duty vehicles - Saab-Scania, 8:18225 (R;US)
Sachs/Freeman Associates, Inc., Bowie, MD (USA)
Investigation of shorebased powerline transients. Phase II. Final report, 8:17779 (R;US)
Sandia National Labs., Albuquerque, NM (USA)
Adaptive line enhancement and sinusoidal burst detection, 8:19384 (R;US)
Assessment of a high-energy coordination compound, 8:18562 (R;US)
Asymptotic bounds on the errors of one-step methods, 8:19385 (R;US)
Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8:17410 (R;US)
Basic data report for drillhole ERDA 9 (Waste Isolation Pilot Plant WIPP), 8:17411 (R;US)
Beneficial uses of nuclear byproducts/sewage sludge irradiation project. Progress report, October 1981-March 1982, 8:17474 (R;US)
Capacitive load and data-acquisition system for photovoltaic-array testing, 8:17581 (R;US)
Comparison of risks due to HLW and SURF repositories in bedded salt, 8:17443 (R;US)
Conclusions regarding geotechnical acceptability of the WIPP site, 8:17414 (R;US)
Creep testing of salt: procedures, problems and suggestions, 8:19017 (R;US)
DARPA dynamic synthesis program: Sandia National Laboratories' program on shock-activated sintering. Second quarterly report, 8:18281 (R;US)
Diffusion bonding of Stratapax for drill bits, 8:17720 (R;US)
Effects of wire rope in a Waste Isolation Pilot Plant (WIPP) waste shaft accident, 8:17412 (R;US)
Electron-stimulated desorption from condensed branched alkanes, 8:18368 (R;US)
Engineering model for predicting rubble motion during blasting, 8:19018 (R;US)
Equipment for the emplacement of heat-producing waste in long horizontal boreholes, 8:17357 (R;US)
Full-scale turbine-missile-casing tests. Final report, 8:17797 (R;US)
Geo energy research and development: technology transfer update, 8:17164 (R;US)
Global-error estimation for stiff ODEs, 8:19383 (R;US)
Helium release from tritium occluders in Zetatron tubes, 8:18498 (R;US)
High-energy gas-fracturing development. Annual report, April 1981-March 1982, 8:17284 (R;US)
HIgh-temperature electrical conductivity and thermal decomposition of Sylgard 184 and 184/GMB, 8:18295 (R;US)
Instrumentation and data analysis from Occidental retorts MR-3 and MR-4, 8:17300 (R;US)
Investigation of the potential for using electrochemical technology to reduce drill bit wear, 8:17718 (R;US)
Prediction of hydraulic fracture azimuth through geological, core and analytical studies, 8:17285 (R;US)
Sandia National Laboratories Technical Library status report, 8:19395 (R;US)
Severe Accident Risk Reduction Program, 8:17962 (R;US)
Static slot testing of conventional lost circulation materials, 8:17719 (R;US)

Thermal efficiency of a steam injection test well with insulated tubing, 8:17217 (R;US)
Transition radiation: a possible diagnostic tool for relativistic electrons at Sandia, 8:19241 (R;US)
Value-impact analysis of severe-accident prevention and mitigation systems, 8:17961 (R;US)
WIPP research and development program: providing the technical basis for defense waste disposal, 8:17413 (R;US)

Sandia National Labs., Livermore, CA (USA)
DRAC: a user-friendly computer code for modeling transient thermohydraulic phenomena in solar-receiver tubing, 8:17643 (R;US)
Ignition and flame-propagation studies with adaptive numerical grids, 8:18390 (R;US)
Multi-Well Experiment Core Program, 8:17261 (R;US)

Santa Clara Univ., CA (USA)
Inclusion principle for dynamic systems. Final report, September 1, 1977-April 30, 1982, 8:17780 (R;US)

Sao Paulo Univ. (Brazil). Inst. de Fisica
Characteristics of natural - and brush fire atmospheric aerosols of the Amazon basin, 8:18603 (R;BR;In Portuguese)
Preliminary data on atmospheric aerosol of the Amazon basin, 8:18604 (R;BR)
Structural aspects of the atmospheric aerosol of the Amazon basin, 8:18605 (R;BR;In Portuguese)
Trace-elements of the atmospheric aerosol of the Amazon basin, 8:18602 (R;BR)

Sarasota Board of Public Instruction, FL (USA)
Overview of the Solar in Federal Buildings Demonstration Program (SFBP), 8:17650 (R;US)

Savannah River Ecology Lab., Aiken, SC (USA)
Evaluation of the Steel Creek ecosystem in relation to the proposed restart of the L-reactor, 8:18743 (R;US)

Schafer (W.J.) Associates, Inc., Arlington, VA (USA)
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs, 8:17785 (R;US)

School of Aerospace Medicine, Brooks AFB, TX (USA)
Animal-model studies of radiation-induced emesis and its control. Interim report Jan 75-Jan 81, 8:18957 (R;US)

Science and Engineering Research Council, Chilton (UK). Rutherford Appleton Lab.
Depolarisation effects in resonance absorption neutron polarising filters, 8:19240 (R;US)
Design of a pulse stacker, 8:18439 (R;US)
Design of neodymium glass disc amplifiers, 8:18440 (R;US)
Electron/hadron discrimination in the hyperon semi-leptonic decay experiments performed at the CERN SPS, 8:18540 (R;US)
Pole face winding thyristor power supplies as used for Nimrod, 8:18490 (R;US)

Science Applications, Inc., Albuquerque, NM (USA)
Comparison of risks due to HLW and SURF repositories in bedded salt, 8:17443 (R;US)

Science Applications, Inc., Chatsworth, CA (USA). Combustion Science and Advanced Technology Dept.
Combustion diagnostic instrumentation. part I: probe measurements. Final report Sep 81-Mar 82, 8:18388 (R;US)
Performance modeling of advanced gas burner systems. Annual report may 81-jun 82, 8:18479 (R;US)

Science Applications, Inc., Golden, CO (USA)
Parameter sensitivity analysis of tailored-pulse loading stimulation of Devonian gas shale, 8:17280 (R;US)

Science Applications, Inc., McLean, VA (USA)
Analysis of radiation exposure for troop observers, Exercise Desert Rock V, Operation Upshot-Knothole. Final report 1 Mar 80-28 Apr 81, 8:18571 (R;US)
Probabilistic approaches to LCO's and surveillance requirements for standby safety systems, 8:18804 (R;US)
Radiation from high temperature plasmas. Phase II. Final report 15 Jul 81-14 Jul 82, 8:19358 (R;US)

Science Applications, Inc., Morgantown, WV (USA)
Modeling of Devonian shale-gas reservoirs (conduct reservoir modeling for the Devonian shales). Final report, 8:17269 (R;US)

Science Applications, Inc., Oak Brook, IL (USA)
Comparison of selected risk contributions of an LMFBR and an LWR: Phase A. Final report, 8:17931 (R;US)

Science Applications, Inc., Oak Ridge, TN (USA)
Alpha-contaminated waste management workshop, 8:17345 (R;US)

Science Applications, Inc., Palo Alto, CA (USA)
ATWS: a reappraisal. Part 3. Frequency of anticipated transients, 8:17929 (R;US)
Data base management project. Annual report, 29 September 1981-29 September 1982, 8:17888 (R;US)

Science Applications, Inc., Raleigh, NC (USA)
Analysis of current meter records at the northwest atlantic 2800 metre radioactive waste dumpsite. Final report, 8:17431 (R;US)

Science Applications, Inc., Salt Lake City, UT (USA)
Environmental resources and potential impacts for a nuclear energy center near Green River, Utah. Volume II. Maps, 8:18732 (R;US)

Science Information Services, Inc., Philadelphia, PA (USA)
Biological effects of nonionizing electromagnetic radiation: a digest of current literature, October thru December 1981. volume VI, number 2, 8:18992 (R;US)

Scottish Research Reactor Centre, East Kilbride (UK)
Radiochemical investigations of trace elements in ancient metals, 8:18322 (R;US)
Upgrading power of the Scottish Universities Research Reactor to 300 kW thermal. Part 3: Commissioning and post commissioning report, 8:17913 (R;US)

SECOR Inc., Montreal, Quebec (Canada)
Cost of implementing AECB interim criteria for the closeout of uranium tailings sites. A report prepared for the Atomic Energy Control Board, 8:17366 (R;CA)

Sentralinstitutt for Industriell Forskning, Oslo (Norway)
Degradation of polycylic aromatic hydrocarbons during sampling, 8:18679 (R;US)
Identification of oil spills at sea: development of a system for the identification of oil spills. Technical report, 8:17241 (R;US)
Oil spill combat: damage assessment using multiattribute utility analysis. Final report, 8:17242 (R;US)

Siemens A.G., Muenchen (Germany, F.R.). Forschungslaboratorien
Gas-sensitive semiconductor field-effect sensors. Final report, 8:18665 (R;US)

Sigma Research, Inc., Richland, WA (USA)
Optical probe for steam-generator-tube dent measurement. Final report, 8:17832 (R;US)

Skelly and Loy, Harrisburg, PA (USA)
Partial listing of coal waste embankments, surface and underground openings, 8:17111 (R;US)
Partial listing of coal waste embankments, surface and underground openings: appendix, volume II. Open file report (final) Mar 80-Aug 81, 8:17114 (R;US)
Partial listing of coal waste embankments, surface and underground openings. Open file report (final) Mar 80-Aug 81, 8:17112 (R;US)
Partial listing of coal waste embankments, surface and underground openings: appendix, volume I. Open file report (final) Mar 80-Aug 81, 8:17113 (R;US)

Skoda, Plzen (Czechoslovakia)
Distribution of pressure acting on core barrel and caused by simultaneous operation of several circulating pumps, 8:17846 (R;CS)
Rice frequency as a parameter of mechanical vibrations of circulating pumps, 8:17847 (R;CS)

Sloan-Kettering Inst. for Cancer Research, New York (USA). Radiation Biophysics Lab.
Biological and clinical dosimetry. Progress report, October 1, 1981-August 31, 1982, 8:19243 (R;US)

Small Business Administration, Washington, DC (USA)
Small business in the emerging energy technologies. Final report, 8:18124 (R;US)

Social Impact Research, Inc., Seattle, WA (USA)
Socioeconomic impacts of nuclear generating stations: Arkansas Nuclear One station case study. Technical report 1 Oct 78-4 Jan 82, 8:17872 (R;US)
Socioeconomic impacts of nuclear generating stations: Calver Cliffs case study. Technical report 1 Oct 78-4 Jan 82, 8:17873 (R;US)
Socioeconomic impacts of nuclear generating stations: Crystal River Unit 3 case study. Technical report 1 Oct 78-4 Jan 82, 8:17874 (R;US)
Socioeconomic impacts of nuclear generating stations: D. C. Cook case study. Technical report 1 Oct 78-4 Jan 82, 8:17875 (R;US)

Socioeconomic impacts of nuclear generating stations - Diablo Canyon case study. Technical report for 1 Oct 78-4 Jan 82, 8:17876 (R;US)
Socioeconomic impacts of nuclear generating stations: Nine Mile Point and Fitzpatrick case study. Technical report 1 Oct 78-4 Jan 82, 8:17877 (R;US)
Socioeconomic impacts of nuclear generating stations: Rancho Seco case study. Technical report 1 Oct 78-4 Jan 82, 8:17880 (R;US)
Socioeconomic impacts of nuclear generating stations: St. lucie case study. Technical report 1 Oct 78-4 Jan 82, 8:17881 (R;US)
Socioeconomic impacts of nuclear generating stations: Surry case study. Technical report 1 Oct 78-4 Jan 82, 8:17882 (R;US)
Socioeconomic impacts of nuclear generating stations: Three Mile Island case study. Technical report 1 Oct 78-4 Jan 82, 8:17883 (R;US)
Socioeconomic impacts of nuclear generating stations: Oconee case study. Technical report 1 Oct 78-4 Jan 82, 8:17878 (R;US)
Socioeconomic impacts of nuclear generating stations: Peach Bottom case study. Technical report 1 Oct 78-4 Jan 82, 8:17879 (R;US)
Sociological impacts of nuclear generating stations - summary report on the NRC post-licensing studies. Final report 1 Oct 78-4 Jan 82, 8:17884 (R;US)

Sociedade Brasileira de Quimica, Araraquara
Regional Meeting on Chemistry - Book of abstracts, 8:18305 (R;BR;In Portuguese)

Soil Systems, Inc., Marietta, GA (USA)
Environmental data inventory, state of Alabama, January 1, 1981. Final report, 8:18024 (R;US)

Solar-Dronics, Inc., Colorado Springs, CO (USA)
Solar domestic hot-water system: La Quinta Motor Inn, Casper, Wyoming, 8:17653 (R;US)

Solar Energy Industries Association, Washington, DC (USA)
DOE solar-thermal-energy program on-line budget analysis, 1983. Task II report, 8:17535 (R;US)
International solar-thermal market assessments: an evaluation, 8:17536 (R;US)
Options for federal income-tax incentives for the solar-energy industry. Task III report, 8:17534 (R;US)
Solar-thermal-program strategy. Task V report, 8:17636 (R;US)
Status of the solar-thermal industry: an assessment, 8:17637 (R;US)

Solar Energy Research Inst., Golden, CO (USA)
Biotechnology for the production of chemicals and fuels from biomass, 8:17504 (R;US)

Southampton Univ. (UK)
Experimental determination of initial vibrational and rotational energy distributions from the reaction of atomic deuterium with molecular fluorine. Final scientific report 1 Jun 80-1 Jul 81, 8:19052 (R;US)

South Carolina State Coll., Orangeburg (USA). School of Business
Study of energy consumption and use patterns of minorities in South Carolina and parts of Georgia and North Carolina, including socio-economic impact studies. Volume II. Energy-policy implications of the survey data. Final report, 8:18118 (R;US)

South Carolina Univ., Columbia (USA). Coll. of Engineering
Thermodynamic consistency test procedure using orthogonal collocation and the Peng-Robinson equation of state, 8:18336 (R;US)

South Carolina Univ., Columbia (USA). Dept. of Physics
Early results from the Battelle-Carolina ^{76}Ge double-beta-decay project, 8:19166 (R;US)

Southern Illinois Univ., Carbondale (USA). Cooperative Wildlife Research Lab.
A guide for enhancement of fish and wildlife on abandoned mine lands in the eastern United States. Final report, 8:17125 (R;US)

Southern Research Inst., Birmingham, AL (USA)
Sampling and data handling methods for inhalable particulate sampling. Final report nov 78-dec 80, 8:18670 (R;US)

Southern Tier Central Regional Planning and Development Board, Corning, NY (USA)
Design study for a regional energy development corporation. Final report, 8:18037 (R;US)

Southwest Research Inst., San Antonio, TX (USA)
Feasibility of water injection for particulate removal in large turbocharged diesel engines. Open file report Dec 79-May 81, 8:18232 (R;US)
Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1. Construction of apparatus and preliminary experiments, 8:18382 (R;US)
Nonstandard aging tests on coal-derived distillate fuels. Technical progress report, 7 July 1982-6 January 1983, 8:17085 (R;US)

Southwest Research Inst., San Antonio, TX (USA). Army Fuels and Lubricants Research Lab.
Effect of flame temperature and fuel composition on sooting tendency in a research combustor. Interim report Jun 80-Oct 81, 8:17253 (R;US)
Installation of a diesel engine combustion/ignition evaluation facility. Interim report Oct 80-Sep 81, 8:18215 (R;US)

SPM Group, Inc., Englewood, CO (USA)
Refuse-derived-fuel pre-separator process-technology evaluation, 8:18474 (R;US)

Squibb (E.R.) and Sons, Inc., Princeton, NJ (USA)
Development of W-Ta generator, 8:17479 (R;US)

SRI International, Menlo Park, CA (USA)
Basic studies of new coal conversion catalysts. Annual report, 8:17059 (R;US)
Dip process thermal-barrier coatings for superalloys. Final report 1 Jul 79-30 Jun 80, 8:18241 (R;US)
Experimental extinguishment of fires by blast. Final report, 8:18574 (R;US)
Identification and cleavage of breakable single bonds by selective oxidation, reduction, and hydrolysis. Quarterly report No. 16, July 1-October 31, 1982, 8:17083 (R;US)

Stanford Linear Accelerator Center, CA (USA)
BADC: semi-autonomous controller for data acquisition, the brilliant ADC (Engineering Materials), 8:18554 (E;US)
Coil-winding fixture for SLAC's Mark III detector (Engineering Materials), 8:18504 (E;US)
Copper plating 300 series stainless steel (Engineering Materials), 8:18277 (E;US)
Drift tube: future rf cavity 7S8 SPEAR (Engineering Materials), 8:18519 (E;US)
Mark III detector gas-system schematic (Engineering Materials), 8:18550 (E;US)
Observation of the radiative decay J/psi $\rightarrow \gamma$ eta $\pi\pi$, 8:19097 (R;US)
PEP all metal isolation valve (Engineering Materials), 8:18517 (E;US)
PEP bakeout oven: working drawing list (Engineering Materials), 8:18515 (E;US)
PEP ring quadrupole magnetic measurement equipment (Engineering Materials), 8:18508 (E;US)
PEP storage ring magnets and power supply system (Engineering Materials), 8:18514 (E;US)
Selected vacuum components of PEP experiment detectors (Engineering Materials), 8:18505 (E;US)
SHAM IV: sample and hold analog module (Engineering Materials), 8:18558 (E;US)
Single turn integrator (Engineering Materials), 8:18516 (E;US)
SLAC accelerator automatic phasing system (Engineering Materials), 8:18500 (E;US)
SLAC Mark III detector muon steel (Engineering Materials), 8:18507 (E;US)
SLAC Positron source accelerator section girder 11-3A (Engineering Materials), 8:18506 (E;US)
SLAP PEP bakeout hot water system (Engineering Materials), 8:18518 (E;US)
SPEAR septum magnet layout and installation in Region 355 (Engineering Materials), 8:18509 (E;US)
Three flavor beam trigger (Engineering Materials), 8:18549 (E;US)
Time-of-flight delay controller (Engineering Materials), 8:18553 (E;US)
Time-of-flight tester (Engineering Materials), 8:18501 (E;US)
Vacuum system for Mark II detector (Engineering Materials), 8:18502 (E;US)
Waveguide high-power switch (Engineering Materials), 8:18503 (E;US)
Waveguide, waveguide valve, flanges and gaskets, directional coupler and accelerator (Engineering Materials), 8:18511 (E;US)

Stanford Univ., CA (USA). Dept. of Geology
Rock-brine chemical interactions. Final report, 8:17726 (R;US)

Stanford Univ., CA (USA). Dept. of Mechanical Engineering
Development of a predictive computer code for heat losses from solar external receivers, 8:17642 (R;US)

Effects of core nonuniformities on the performance of MHD generators, 8:18127 (R;US)
Stanford Univ., CA (USA). Inst. for Plasma Research
Invalidity of local thermodynamic equilibrium for electrons in the solar transition region. I. Fokker-Planck results, 8:19025 (R;US)
On the thermal stability of coronal loop plasma, 8:19026 (R;US)
Stanford Univ., CA (USA). Petroleum Research Inst.
Analysis of unit mobility ratio well-to-well tracer flow to determine reservoir heterogeneity, 8:17214 (R;US)
Stanford Univ., CA (USA). Systems Optimization Lab.
Modified aggregation program for the PILOT Process Integrated Model. Technical report SOL 80-31, 8:17998 (R;US)
Simplified algorithms for computing dynamic solutions to multi-regional planning models. Technical report SOL 81-2, 8:17989 (R;US)
Statens Inst. foer Byggnadsforskning, Stockholm (Sweden)
Swedish national and local government programs for conservation of energy in buildings, 8:18158 (R;US)
Statens Raad foer Byggnadsforskning, Stockholm (Sweden)
Swedish building research news, number 1, 1982, 8:18157 (R;US)
Synopses of Swedish building research, number 3, April 1982, 8:18155 (R;US)
Synopses of Swedish building research, number 2, March 1982, 8:18156 (R;US)
Synopses of Swedish building research, number 4, May 1982, 8:18154 (R;US)
Statens Stralskyddsinstitut, Stockholm (Sweden)
Contents of radon and radium in the water from large water-works in Sweden, 8:18774 (R;SE;In Swedish)
Release of activity and occupational exposure of the nuclear power industry. Quarterly report, 4th quarter 1981, 8:17909 (R;SE;In Swedish)
State Univ. of New York, Buffalo (USA)
Catalytic coal liquefaction. Quarterly report, October-December 1982, 8:17032 (R;US)
State Univ. of New York, Stony Brook (USA)
Neutrino-electron scattering. Progress report, 8:19074 (R;US)
State Univ. of New York, Stony Brook (USA). Marine Sciences Research Center
Stabilized coal waste in the Chesapeake Bay-Choptank River estuary: environmental investigations. Final report, 8:17127 (R;US)
STD Research Corp., Arcadia, CA (USA)
Analytical investigation of critical MHD phenomena. Annual report, September 1980 - September 1981, 8:18128 (R;US)
Studsvik Energiteknik AB, Nykoeping (Sweden)
Lapse of the release of radioactivity on postulated cases of core meltdown reactor accidents at Swedish boiling water reactors. Stage I. Final report, 8:17963 (R;SE;In Swedish)
Stuttgart Univ. (Germany, F.R.)
Completion of a simulation model for calculation of static and dynamic behaviour of steam generators and its use for a pilot steam generator, 8:17761 (R;DE;In German)
Investigation of D_2O laser emission at 50, 66, 83, 111, and 116 microns, 8:18436 (R;DE)
Stuttgart Univ. (Germany, F.R.). Fachbereich Energietechnik
Contribution to the numerical flow calculation in compressor and turbine grids, 8:18407 (R;DE;In German)
Stuttgart Univ. (TH) (Germany, F.R.). Betriebswirtschaftliches Inst.
Dynamics of structural change in pursuing alternative strategies of energy policy in the supply area of an energy supply utility, 8:18111 (R;DE;In German)
Suffolk County Community Coll., Selden, NY (USA). Div. of Engineering Science and Technology
2.6°K refrigeration system for CBA magnet testing, 8:18396 (R;US)
Sussex Univ., Brighton (UK). Science Policy Research Unit
The supply of Australian coal. Occasional paper series, 8:17190 (R;US)
Worldwide nuclear plant performance. Occasional paper series, 8:17792 (R;US)
Svensk Kaernbraenslefoersoerjning AB, Stockholm
Chemical interaction of clay buffer materials and concrete, 8:17415 (R;SE)
Predictive geology in nuclear waste management, 8:17416 (R;SE)
Sveriges Geologiska Undersoekning, Uppsala
Radon - geological aspects of an environmental problem: environmental radon investigation in Sweden - regional environmental documentation of natural radiation in Sweden, 8:18724 (R;US)
Sveriges Lantbruksuniversitet, Uppsala. Institutionen foer Virkeslaera
Storage of fuelwood chips in fraction 25-30 mm., 8:17518 (R;US)
Swiss Federal Inst. for Reactor Research, Wuerenlingen
Application of analytical capability to predict rapid cladding cooling and quench during the blowdown phase of a large break loss-of-coolant accident, 8:17922 (R;US)
Sydkraft AB, Malmoe (Sweden)
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81, 8:17738 (R;SE)
Synergy, Inc., Washington, DC (USA)
Complementary data systems: FRS involvement in oil pipeline companies. Final report, 8:17247 (R;US)
Systech Corp., Xenia, OH (USA)
Five resource recovery success stories, 8:18208 (R;US)
Systems Applications, Inc., San Rafael, CA (USA)
Comparative application of the KMA in the Los Angeles area, 8:18633 (R;US)
Evaluating simple oxidant prediction methods using complex photochemical models: cluster analysis applied to urban ozone characteristics, 8:18634 (R;US)
The sensitivity of complex photochemical model estimates to detail in input information, 8:18631 (R;US)
The sensitivity of complex photochemical model estimates to detail in input information - appendix b: specification and assessment of airshed model input requirements, 8:18632 (R;US)
The sensitivity of complex photochemical model estimates to detail in input information. Appendix A: a compilation of simulation results, 8:18635 (R;US)
Systems Control, Inc., Palo Alto, CA (USA)
HPOF transmission-system economic-evaluation program. Final report, 8:17783 (R;US)
Systems, Science and Software, La Jolla, CA (USA)
The physical basis of mb:Ms and variable frequency magnitude methods for earthquake/explosion discrimination. Topical report, 8:18584 (R;US)
Systems Technology Corp., Xenia, OH (USA)
Physical characteristics of densified refuse derived fuel and their impact on flow properties. Final report, 8:17515 (R;US)
Systems Technology Lab., Inc., Arlington, VA (USA)
Special routing of spent fuel shipments. Final report Dec 79-Apr 81, 8:17340 (R;US)

T

Technical Chamber of Greece, Athens
Nuclear propulsion and engineering for engineers, 8:17915 (R;US)
Technion-Israel Inst. of Tech., Haifa. Energy Engineering Center
Fluidized bed combustion of oil shale, 8:17304 (R;IL;In English and Hebrew)
Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Maschinenwesen
Criticality problems in the HEAD-END of reprocessing of HTGR fuel elements, 8:17332 (R;DE;In German)

Pathogenesis of radiation-induced osteosarcomas, 8:18857 (R;DE;In German)
Technisch-Physische Dienst TNO-TH, Rijswijk (Netherlands)
Draft recommendations for a European reporting format on the performance of solar heat stores. Final report, 8:17689 (R;XE)
Teledyne Geotech, Alexandria, VA (USA). Seismic Data Lab.
Evaluation of seismic event location methods on the regional event location system (rels). Technical report, 8:18583 (R;US)
Teledyne Geotech, Garland, TX (USA)
Microseismic monitoring of Chocolate Bayou Texas: the Pleasant Bayou No. 2 geopressured/geothermal energy test-well program. 1981 annual progress report, 8:17700 (R;US)
Temple, Barker and Sloane, Inc., Lexington, MA (USA)
Preliminary analysis of the effects of the accident at Three Mile Island on Metropolitan Edison Company, 8:17920 (R;US)
Tennessee Univ., Knoxville (USA)
Evaluation of passive-solar modular dwelling, June 30, 1980-August 30, 1981. Final report, 8:17677 (R;US)
Tennessee Univ., Knoxville (USA). Dept. of Physics
Theoretical aspects of high-spin states, 8:19196 (R;US)
Theory of waves, instabilities and transport in thermonuclear plasmas. Final report, 8:19289 (R;US)
Tennessee Univ., Knoxville (USA). Water Resources Research Center
Automated biomonitoring applications in remote water quality surveillance and time rated toxicological assay, 8:18752 (R;US)
Tennessee Univ., Tullahoma (USA). Space Inst.
MHD coal fired flow facility quarterly technical progress report, January-March 1982, 8:18125 (R;US)
Tennessee Valley Authority, Chattanooga (USA)
Field experiences underscore the importance of moisture control in energy-efficient homes, 8:18164 (R;US)
Tennessee Valley Authority, Chattanooga (USA). Div. of Energy Demonstrations and Technology
Field study to obtain trace element mass balances at Kingston Steam Plant. Final report Mar 77-Jun 81, 8:18762 (R;US)
Forced-oxidation demonstration at the TVA Widows Creek Unit 8 FGD System. Final report Apr 78-Nov 81, 8:17777 (R;US)
Texaco, Inc., Montebello, CA (USA). Montebello Research Lab.
Type III extended pilot-plant evaluation of molten H-Coal liquefaction residue. Gasification of residual-materials from coal liquefaction, 8:17021 (R;US)
Texaco, Inc., South El Monte, CA (USA). Montebello Research Lab.
Performance comparison of 15- and 165-tpd Texaco coal gasifiers. Final report, 8:17047 (R;US)
Texas A and M Univ., College Station (USA). Cyclotron Inst.
X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982, 8:19063 (R;US)
Texas A and M Univ., College Station (USA). Dept. of Oceanography
Gas hydrates in deep ocean sediments. Annual report 1 Apr 81-31 Mar 82, 8:17207 (R;US)
Texas A and M Univ., College Station (USA). Remote Sensing Center
Correlations of estimated pumpage from the Ogallala Aquifer with modeled crop water requirements in the Texas High Plains. Final report, 8:18793 (R;US)
Texas A and M Univ., College Station (USA). Research Foundation
Applications of functionalized polymers in catalysis. Final report, September 1, 1977-November 30, 1981, 8:18349 (R;US)
Mechanical and transport properties of rocks at high temperatures and pressures. Task I: the physical nature of fracturing at depth; Task II: fracture permeability of crystalline rocks as a function of temperature, pressure, and hydrothermal alteration; Task III: mechanical properties of rocks at high temperatures and pressures. Progress report, 8:19014 (R;US)
Texas Instruments, Inc., Dallas (USA)
Superconductive niobium oxide tunnel device program. Final report 1 Sep 80-15 Jan 81, 8:18394 (R;US)
Texas Univ., Austin (USA). Bureau of Economic Geology
Exploration and production program for locating and producing prospective aquifers containing solution gas and free gas--Texas Gulf Coast. Annual report Feb 81-Feb 82, 8:17283 (R;US)
Texas Univ., Austin (USA). Center for Electromechanics
Assessment of potential research areas for improving rotating electrical machines for pulsed-power applications. Publication No. XM-12, 8:19326 (R;US)
Mechanical energy storage and electromechanical energy conversion. Publication No. PN-65, 8:19327 (R;US)
Pulsed-power-supply development for fusion applications: special research support agreement, 8:19328 (R;US)
Texas Univ., Austin (USA). Center for Energy Studies
Shale oil, water, and the politics of ambiguity, 8:17308 (R;US)
Texas Univ., Austin (USA). Center for Research in Water Resources
Development of models for the planning of large-scale water-energy systems. Technical report (final), 8:17993 (R;US)
Thermo Electron Corp., Waltham, MA (USA)
Demonstration of the spectral conservation system. Final report, 8:18185 (R;US)
The development of solar-assisted gas-fired appliances: phase ii. Final report dec 80-nov 81, 8:17672 (R;US)
Toyo Kogyo Co. Ltd., Southfield, MI (USA)
Application for certification 1982 model year light-duty vehicles - Mazda (Toyo Kogyo), 8:18224 (R;US)
Transport and Road Research Lab., Crowthorne (UK)
Aerodynamic drag of commercial vehicles, 8:18175 (R;US)
Fuel economy: some effects of driver characteristics and vehicle type, 8:18176 (R;US)
TRW Environmental Engineering Div., Redondo Beach, CA (USA)
Health impacts, emissions, and emission factors for noncriteria pollutants subject to 'de minimis' guidelines and emitted from stationary conventional combustion processes. Special report, 8:18638 (R;US)
TRW, Inc., Durham, NC (USA)
Analysis of new source review (NSR) permitting experience, 8:18708 (R;US)
Tufts Univ., Medford, MA (USA). Dept. of Physics
Symmetry constraints in optimal polarization formalisms with an application to p-p scattering, 8:19130 (R;US)

Tuskegee Inst., AL (USA). Carver Research Foundation
Into the second century (at Tuskegee Institute) with a focus on energy. Final report, 8:18802 (R;US)

U

UKAEA Atomic Energy Establishment, Winfrith
Recommended decay data for 235-neptunium, 8:19183 (R;GB)
UKAEA Atomic Energy Research Establishment, Harwell. Chemistry Div.
Chemical data for the calculation of fission product releases in design basis faults in PWRs, 8:17810 (R;GB)
UKAEA Atomic Energy Research Establishment, Harwell. Metallurgy Div.
List of unclassified documents by the staff of Metallurgy Division, AERE Harwell from January 1979 to July 1980, 8:19353 (R;GB)
Ultrasystems, Inc., Fairfax, VA (USA)
Advanced bio-energy systems for Air Force installations. Final report Feb 80-Jan 81, 8:17747 (R;US)
UNC Inst. for Transportation Research and Education, Research Triangle Park, NC (USA)
Coastal energy transportation study, phase ii, volume 1: a study of OCS onshore support bases and coal export terminals, 8:17176 (R;US)
UNESP, Araraquara (Brazil). Inst. de Quimica
Regional Meeting on Chemistry - Book of abstracts, 8:18305 (R;BR;In Portuguese)
Unidynamics/Phoenix, Inc., AZ (USA)
Assessment of a high-energy coordination compound, 8:18562 (R;US)
United Health Systems Agency, Inc., Concord, NH (USA)
Computed tomographic scanning in New Hampshire, 8:18829 (R;US)
United States Metric Board, Arlington, VA
The conversion of retail fuel pump computers to sale by the liter. Final report, 8:17219 (R;US)
United Technologies Corp., South Windsor, CT (USA)
Low no subx heavy fuel combustor concept program. phase 1a: Coal gas addendum. Final report, 29 Jun. - Oct. 1981, 8:17050 (R;US)
United Technologies Corp., South Windsor, CT (USA). Power Systems Div.
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8:17757 (R;US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8:17755 (R;US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8:17756 (R;US)
United Technologies Research Center, East Hartford, CT (USA)
Mass and momentum turbulent transport experiments with confined coaxial jets, 8:18475 (R;US)
University of Petroleum and Minerals, Dhahran (Saudi Arabia)
Solar energy in the Arab world: policies and programs, 8:17539 (R;KW)
University of South Alabama, Mobile (USA). Dept. of Microbiology/Immunology
Effects of radiation and chemicals on SV40 oncogenesis. Final progress report, 8:18855 (R;US)
Urban Systems Research and Engineering, Inc., Cambridge, MA (USA)
Potential for salt-gradient solar ponds in New York state. Final report, 8:17685 (R;US)
USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC. Office of Industrial Programs
Industrial Energy-Efficiency Improvement Program. Annual report to the Congress and the President 1980, 8:18180 (R;US)

Fire-retardant lubricant for turbine generators. Final report, 8:17829 (R;US)
Westinghouse Electric Corp., Madison, PA (USA). Synthetic Fuels Div.
Advanced development of a pressurized ash agglomerating fluidized-bed coal gasification system. Quarterly progress report, January 16-March 31, 1982, 8:17028 (R;US)
Westinghouse Electric Corp., Pittsburgh, PA (USA)
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines. final report, 8:17758 (R;US)
Quality assurance requirements for certification of TRU waste for shipment to the WIPP, 8:17421 (R;US)
Westinghouse Electric Corp., Pittsburgh, PA (USA). Advanced Energy Systems Div.
Design of a nuclear-waste package for emplacement in tuff, 8:17419 (R;US)
Westinghouse Electric Corp., Pittsburgh, PA (USA). Nuclear Energy Systems Div.
BR-3 high burnup fuel rod hot cell program. Volume 1, 8:17814 (R;US)
BR-3 high burnup fuel rod hot cell program. Volume 2. Data summary, 8:17815 (R;US)
Extended fuel-burnup demonstration program. Semiannual technical progress report, July 1981-December 1981, 8:17812 (R;US)
Westinghouse Electric Corp., Pittsburgh, PA (USA). Nuclear Technology Div.
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8:17796 (R;US)
Westinghouse Electric Corp., Pittsburgh, PA (USA). Research and Development Center
Excitation of mercuric bromide by electrons. Final report 15 May 81-30 Jun 82, 8:18434 (R;US)
Improved solar-collector sealants. Semiannual report, May 1981-October 1981, 8:17679 (R;US)
Westinghouse Research and Development Center, Pittsburgh, PA (USA)
Trace and minor element reactions in fluidized-bed combustion processes. Final report Aug 79-Aug 81, 8:17188 (R;US)
West Virginia Univ., Morgantown (USA). Dept. of Geology and Geography
Bedding-orientation contours of Middle Devonian shales exposed in the Middle Mountain syncline, Valley and Ridge province, West Virginia, 8:17258 (R;US)
Statistical analysis of geochemical data for the Eastern Kentucky Gas Field, 8:17259 (R;US)
West Virginia Univ., Morgantown (USA). Engineering Experiment Station
Analysis of coal mine electrical accidents. Open file report 25 Jun 80-27 Aug 81, 8:17195 (R;US)
Wilhelm Engineering Co., Inc., Ashland, WI (USA)
Dual tube, counter-flow heat exchange for turkey barns. First quarterly report, 8:18181 (R;US)
Wisconsin Univ., Madison (USA)
Manufacture and evaluation of Nb_3Sn conductors fabricated by the MJR method, 8:18412 (R;US)
Shear Alfven waves in tokamaks, 8:19288 (R;US)
Utility spot-pricing study: Wisconsin, 8:18109 (R;US)
Wisconsin Univ., Madison (USA). Dept. of Chemical Engineering
Dynamic models for the control of a highly exothermic packed bed reactor, 8:17500 (R;US)
Process design and control strategies for energy efficiency in the process industries. Progress report, April 1, 1980-December 31, 1982, 8:18191 (R;US)
Wisconsin Univ., Madison (USA). Dept. of Mechanical Engineering
Diesel combustion analysis using rapid sampling techniques. Final report jul 78-jul 82, 8:18216 (R;US)
Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering
Modular coil design for UWTOR-M stellarator reactor, 8:19330 (R;US)
Woods Hole Oceanographic Institution, MA (USA)
Late paleogene (eocene to oligocene) paleoceanography of the northern North Atlantic. Doctoral thesis, 8:19009 (R;US)
Woodward-Clyde Consultants, San Francisco, CA (USA)
Decision model for assessment of sandstone uranium deposits. National Uranium Resource Evaluation. Final report, 8:17314 (R;US)
Worcester Polytechnic Inst., MA (USA)
Kinetics and mechanisms of catalytic hydroliquefaction and hydrogasification of lignite. Final technical report, 8:17030 (R;US)
Kinetics of compressibility in two-phase fluid flows. Final report, 8:18455 (R;US)
Wuerzburg Univ. (Germany, F.R.). Fachbereich Medizin
Radioimmunoassay of pancreatic glucagon. Improvement of method and application in order to determine the role of glucagon in the polytrauma, 8:18834 (R;DE;In German)
Wyoming Univ., Laramie (USA)
Oil shales energy source development. Final report, 8:17299 (R;US)

Toxicity studies of underground coal gasification and tarsands processes. Progress report, February 1, 1982-January 31, 1983, 8:17192 (R;US)

Wyoming Univ., Laramie (USA). Dept. of Zoology and Physiology
Paramecium tetraurelia pre-screen for hazardous chemicals: a rapid detector system for health hazards. 1977-1983 report, 8:18962 (R;US)

X

Xavier Univ., Cincinnati, OH (USA). Dept. of Physics
Design and construction of a folding 60-ft self-supporting tower system, 8:17733 (R;US)

Y

Yale Univ., New Haven, CT (USA)
Development of a direct experimental test for any violation of the equivalence principle by the weak interaction. Final report, 8:19096 (R;US)
Experimental study of opening-mode crack growth in rock. Technical progress report, 8:19015 (R;US)
Simultaneous multipoint measurements of density gradients and temperature in a flame. Progress report, July 1, 1982-January 31, 1983, 8:19286 (R;US)

Yale Univ., New Haven, CT (USA). Dept. of Chemical Engineering
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8:18333 (R;US)

Z

Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden (German Democratic Republic)
Laboratory investigations of the behaviour of radioactive corrosion products in primary circuits of pressurized water reactors. Summary of results for the period 1973 to 1980, 8:17845 (R;DD;In German)
Thermochemistry in nuclear engineering, 8:18337 (R;DD;In German)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R:US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

A

AAEC
Radiation Monitoring
Environmental survey at the AAEC Research Establishment, Lucas Heights - results for 1980, 8: 18693 (R:AU)

ABANDONED SITES
Land Reclamation
A guide for enhancement of fish and wildlife on abandoned mine lands in the eastern United States. Final report, 8: 17125 (R:US)
Monitoring
Analysis of current meter records at the northwest atlantic 2800 metre radioactive waste dumpsite. Final report, 8: 17431 (R:US)

ABNORMALITIES (CHROMOSOMAL)

ACETALDEHYDE
Liquid Column Chromatography
Determination of vapor-phase carbonyls by high-pressure liquid chromatography, 8: 18330 (J:US)

ACETIC ACID
Binding Energy
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Chemical Reactions
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Production
Chemical feedstocks from hardwood by organosolv hydrolysis: computer-aided process design and economic evaluations, 8: 17512 (RA:US)
Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

ACETIC ALDEHYDE
See ACETALDEHYDE

ACETONE
Binding Energy
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Chemical Reactions
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Liquid Column Chromatography
Determination of vapor-phase carbonyls by high-pressure liquid chromatography, 8: 18330 (J:US)
Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

ACETONITRILE
Absorption Spectroscopy
Environmental and in-plant measurement of acetonitrile vapors using an infrared gas analyzer, 8: 18556 (R:US)
Binding Energy
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Chemical Reactions
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Monitoring
Environmental and in-plant measurement of acetonitrile vapors using an infrared gas analyzer, 8: 18556 (R:US)
Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

ACETYLACETONE
Toxicity
Preliminary toxicological study of ferric acetyl acetonate, 8: 18965 (R:US)

ACETYLENE
Hydrogenation
Ab initio calculation of the transition-state properties and addition rate constants for H + C_2H_2 and selected isotopic analogues, 8: 18350 (J:US)

ACETYLENES
See ALKYNES

ACID MINE DRAINAGE
Sludges
Sludge disposal from acid mine drainage treatment. Report of investigations/1982, 8: 17117 (R:US)

ACID RAIN
Bibliographies
Bibliography on air pollution and acid rain effects on fish, wildlife, and their habitats. Final report, 8: 18666 (R:US)
Biological Effects
Acid precipitation: effects on forest and fish. Final report, 8: 18971 (R:NO)
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Economic Impact
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Environmental Effects
ARIS: Acid Rain Information System. Final project report, 8: 18600 (R:US)
Consequences of sulfuric acid inputs to a forest soil, 8: 18715 (BA:US)
Effects of acid precipitation on soil leachate quality: computer calculations, 8: 18608 (R:US)
Environmental Impacts
Acid precipitation: effects on forest and fish. Final report, 8: 18971 (R:NO)
United States-Canadian relations and acid rain, 8: 18711 (B:US)
Environmental Transport
ARIS: Acid Rain Information System. Final project report, 8: 18600 (R:US)
Information Systems
ARIS: Acid Rain Information System. Final project report, 8: 18600 (R:US)
Monitoring
Interagency task force on acid precipitation: first annual report to the President and the Congress of the United States, 8: 18664 (R:US)
Investigation of the particulate phase of acid precipitation, 8: 18680 (R:US)
National Acid Precipitation Assessment Plan, 8: 18667 (R:US)
Survey of acid precipitation in northern California. Final report, 8: 18609 (R:US)
Political Aspects
United States-Canadian relations and acid rain, 8: 18711 (B:US)
Reviews

Anaerobic Digestion
Dry fermentation of agricultural residues. Final subcontract report, 8: 17586 (R:US)
AGRICULTURE
Energy Conservation
Department of Agriculture could do more to help farmers conserve energy, 8: 18194 (R:US)
Senegal food and energy study: energy use and opportunities for energy-related improvements in the food system, 8: 18850 (R:US)
Research Programs
Energy research for the farm: an overview. Agriculture information bulletin, 8: 18038 (R:US)
Progress report 1979, 8: 18035 (R:TR:In English and Turkish)
AIR
Charged-Particle Transport
Short-pulse electron-beam propagation experiments in a controlled-environment chamber. Final technical report 8 jun 81-8 mar 82, 8: 19205 (R:US)
Chemical Analysis
Quality assurance for environmental analytical chemistry: 1981, 8: 18317 (R:US)
AIR CLEANING SYSTEMS
Technology Assessment
Nuclear air cleaning: the need for a change in emphasis, 8: 18698 (R:US)
AIR FILTERS
Chemical Analysis
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Efficiency
Nuclear air cleaning: the need for a change in emphasis, 8: 18698 (R:US)
Performance Testing
Test and evaluation of hot-gas cleanup devices, Phase I and II (Task 1). Technical progress report, March 1-May 31, 1982, 8: 17102 (R:US)
AIR FLOW
Calculation Methods
SHALO: a simple theoretical description of drainage flow, 8: 17709 (R:US)
Mathematical Models
SHALO: a simple theoretical description of drainage flow, 8: 17709 (R:US)
Turbulence
Modified finite-element model for application to terrain-induced mesoscale flows, 8: 18598 (R:US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Development of a compact microwave spectrometer for gas analysis, based on the stark effect. Final report Oct 78-Dec 80, 8: 18686 (TG:US)
Thanksgiving 1966 air pollution episode in the eastern United States (Meteorology correlated with pollutant concentrations), 8: 18592 (R:US)
Bibliographies
Bibliography on air pollution and acid rain effects on fish, wildlife, and their habitats. Final report, 8: 18666 (R:US)
Data Base Management
National Emissions Data System (NEDS) source classification code and emission factor listing, 8: 18627 (R:US)
Diffusion
Three dimensional numerical model for estimation of pollutant concentration, 8: 18606 (R:BR:In several languages)
Ecological Concentration
Three dimensional numerical model for estimation of pollutant concentration, 8: 18606 (R:BR:In several languages)
Economic Analysis
A review of air pollutant damage to materials, 8: 18660 (R:US)
Environmental Transport
Addendum to user's guide for climatological dispersion model. Final report, 8: 18593 (R:US)
Modified finite-element model for application to terrain-induced mesoscale flows, 8: 18598 (R:US)
Multimedia exposure assessment model data needs, 8: 18611 (R:US)
New pollutant-dispersion model for application in mountain valleys, 8: 18683 (R:US)
Spatially averaging cross-wind sensors and numerical-model results for nocturnal drainage winds in complex terrain, 8: 18597 (R:US)
Turbulent transfer processes to a surface and interaction with vegetation, 8: 18689 (BA:US)
Forecasting
Time-series analysis for identification of particle-emission sources, 8: 18589 (R:US)

Licenses
Implementing tradable emissions permits for sulfur oxides emissions in the south coast air basin. Volume II. main report, 8: 18709 (R:US)
Implementing tradable emissions permits for sulfur oxides emissions in the south coast air basin. Volume III: appendices, 8: 18710 (R:US)
Mathematical Models
Comparative application of the KMA in the Los Angeles area, 8: 18633 (R:US)
Development of computerized emission projection and allocation system. phase ii: comparison of existing systems. Final report, 8: 18654 (R:US)
Evaluating simple oxidant prediction methods using complex photochemical models: cluster analysis applied to urban ozone characteristics, 8: 18634 (R:US)
Evaluation of four urban-scale photochemical air quality simulation models, 8: 18646 (R:US)
New pollutant-dispersion model for application in mountain valleys, 8: 18683 (R:US)
The sensitivity of complex photochemical model estimates to detail in input information, 8: 18631 (R:US)
The sensitivity of complex photochemical model estimates to detail in input information - appendix b: specification and assessment of airshed model input requirements, 8: 18632 (R:US)
The sensitivity of complex photochemical model estimates to detail in input information. Appendix A: a compilation of simulation results, 8: 18635 (R:US)
Meteorology
Meteorological potential for urban air pollution in the contiguous United States, 8: 18655 (R:US)
Monitoring
Air quality data - 1975 annual statistics including summaries with reference to standards, 8: 18678 (R:US)
Guideline for the implementation of the Ambient Air Monitoring Regulations 40 CFR Part 58, 8: 18626 (R:US)
Health impacts, emissions, and emission factors for noncriteria pollutants subject to 'de minimis' guidelines and emitted from stationary conventional combustion processes. Special report, 8: 18638 (R:US)
Procedures for emission inventory preparation. Volume I: Emission inventory fundamentals, 8: 18649 (R:US)
Procedures for emission inventory preparation. Volume III: Area sources, 8: 18651 (R:US)
Procedures for emission inventory preparation. Volume IV: Mobile sources, 8: 18652 (R:US)
PSD monitoring. Memorandum report, 8: 18661 (R:US)
Quality Assurance in Support of Energy Related Monitoring Activities. Final report, 8: 18637 (R:US)
Mutagen Screening
Geographical and temporal distribution of atmospheric mutagens in California. Final report 10 Dec 79-9 Mar 81, 8: 18979 (R:US)
Pollution Regulations
Guideline for the implementation of the Ambient Air Monitoring Regulations 40 CFR Part 58, 8: 18626 (R:US)
Prevention of Significant Deterioration
PSD monitoring. Memorandum report, 8: 18661 (R:US)
Regulations
Analysis of new source review (NSR) permitting experience, 8: 18708 (R:US)
Time-Series Analysis
Time-series analysis for identification of particle-emission sources, 8: 18589 (R:US)
AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Development of a compact microwave spectrometer for gas analysis, based on the stark effect. Final report Oct 78-Dec 80, 8: 18686 (TG:US)
Bibliographies
Procedures for emission inventory preparation. Volume V: Bibliography, 8: 18653 (R:US)
Cost
Medium duty vehicle emission control cost effectiveness comparisons. volume i. executive summary. Final report, 8: 18238 (R:US)
Cost Benefit Analysis
Acid rain: control strategies for coal-fired utility boilers. Volume I, 8: 17103 (R:US)
Financial Incentives
Incentives for technological innovation in air pollution reduction: an ETIP policy research series. volume 9: internal offsets and technological innovation: six case studies, 8: 18797 (R:US)
Mathematical Models
Comparison of three ozone models: urban airshed, City-specific EKMA and proportional Rollback. Final report, 8: 18629 (R:US)
Standards
Revised standards for basic oxygen process furnaces: background information for proposed standards, 8: 18703 (R:US)
Technology Assessment
Sulfur oxides control technology in Japan, 8: 18659 (R:US)
AIR POLLUTION MONITORS
Sampling and data handling methods for inhalable particulate sampling. Final report nov 78-dec 80, 8: 18670 (R:US)
Calibration
Environmental and in-plant measurement of acetonitrile vapors using an infrared gas analyzer, 8: 18556 (R:US)
Design
Development of a continuous methane monitor. Open file report Jun 77-Mar 80, 8: 18662 (R:US)
Development of a portable field monitor for PCBs. Final report, 8: 17235 (R:US)
Feasibility study of coal dust measurement by light reflectance photometry. Open file report 20 Aug 79-20 May 81, 8: 17089 (R:US)
Evaluation
A study to evaluate carbon monoxide and hydrogen sulfide continuous emission monitors at an oil refinery. Final report, 8: 18613 (R:US)
Performance
Laboratory evaluation of the Du Pont p-2500 automatic flow-controlled personal dust sampling pump. Report of investigations/1982, 8: 18610 (R:US)
AIR QUALITY
Air quality data - 1975 annual statistics including summaries with reference to standards, 8: 18678 (R:US)
Air quality measurements for site characterization, 8: 17427 (RA:US)
Radiochemical measurements for evaluating air quality in the vicinity of low-level waste burial sites - the West Valley experience, 8: 17428 (RA:US)
Mathematical Models
The Maryland Power Plant Siting Program (PPSP) air quality model user's guide. Final report, 8: 18644 (R:US)
Monitoring
Problems in air-quality monitoring system affect data reliability, 8: 18016 (R:US)
Simulated precipitation reference materials, II, 8: 18681 (R:US)
AIR TRANSPORT
Automation
Automation of on-board flightpath management, 8: 18169 (R:US)
Optimization
Automation of on-board flightpath management, 8: 18169 (R:US)
AIRBORNE PARTICLES
See PARTICULATES
AIRBORNE PARTICULATES
See PARTICULATES
AIRCRAFT
Fuel Consumption
Hp-41CV flight performance advisory system (FPAS) for the E-2c, E-2B, and C-2A aircraft. Final technical report Apr-Jun 82, 8: 18166 (R:US)

Turbojet Engines
Survey and update of F-14a mission profiles for TF30 engine usage. Final report, 8: 18165 (R:US)

AIRCRAFT ACCIDENTS
See ACCIDENTS

AIRCRAFT COMPONENTS
Determination of effects of ambient conditions on aircraft engine emissions: ALF 502 combustor rig testing and engine verification test. Final report Mar 76-Jan 77, 8: 18645 (R:US)
Reliability
Reliability-confidence methodology for complex systems, 8: 18465 (R:US)

AIRCRAFT PROPULSION REACTORS
Nuclear propulsion and engineering for engineers, 8: 17915 (R:US)

AIRPORTS
Photovoltaic Power Supplies
Intermediate photovoltaic system application experiment operational performance report for Dallas-Fort Worth Regional Airport, Texas, for August 1982, 8: 17627 (R:US)

ALABAMA
Resource Development
Environmental data inventory, state of Alabama, January 1, 1981. Final report, 8: 18024 (R:US)

ALAP
See RADIATION PROTECTION

ALARM DOSEMETERS
See RADIATION MONITORS

ALASKA
Meteorology
Surface and upper-air observations in the eastern Bering Sea, February and March 1981. Technical memo, 8: 18594 (R:US)
Water Pollution
Processes affecting the distribution of low-molecular-weight aliphatic hydrocarbons in Cook Inlet, Alaska. Technical memo, 8: 18761 (R:US)

ALASKA OIL PIPELINE
Charges
FERC expenditures for the Trans-Alaska Pipeline System (TAPS) case, 8: 17226 (R:US)
Insurance
Review of the Trans-Alaska Pipeline Liability Fund's financial statements for the year ended December 31, 1981, 8: 17223 (R:US)

ALBERTA
Oil Sand Deposits
Current in situ oil sands pilot projects in Alberta, Canada, 8: 17302 (BA:US)
Mine-assisted in situ project: an update, 8: 17303 (BA:US)

ALBUMEN
See ALBUMINS

ALBUMINS
Chemical Radiation Effects
Investigation on the radiation damage in biomolecules, 8: 18921 (BA:XE)

ALCOHOLS
See also ETHANOL
GLYCOLS
METHANOL
METRONIDAZOLE
Fuel Substitution
Microemulsions from vegetable oil and aqueous alcohol with trialkylamine surfactant as alternative fuel for diesel engines, 8: 17496 (P:US)
Mutagen Screening
Tier II mutagenic screening of 13 NIOSH priority compounds, individual compound report 2-methoxyethanol, 8: 18982 (R:US)

ALFALFA
Enzymatic Hydrolysis
Preliminary process engineering evaluation of ethanol production from vegetative crops, 8: 17513 (RA:US)

ALFVEN WAVES
Analytical Solution
Shear Alfven waves in tokamaks, 8: 19288 (R:US)
Numerical Solution
Shear Alfven waves in tokamaks, 8: 19288 (R:US)

ALGAE
Aquaculture
Production of marine plant biomass: management, cultivation, and genetic modification of macrophytic algae, 8: 17585 (RA:US)
Biological Radiation Effects
Studies on the effects of radiation on the blue-green algae, 8: 18888 (BA:XE)
Cell Cultures
Heliosynthesis: a solar biotechnology based on direct bioconversion of solar energy by photosynthetic cells, 8: 17584 (RA:US)
Cultivation Techniques
Tasks for the microbial geneticist in phycotechnology, 8: 17583 (RA:US)
Genetic Engineering
Production of marine plant biomass: management, cultivation, and genetic modification of macrophytic algae, 8: 17585 (RA:US)
Genetics
Tasks for the microbial geneticist in phycotechnology, 8: 17583 (RA:US)
Harvesting
Production of marine plant biomass: management, cultivation, and genetic modification of macrophytic algae, 8: 17585 (RA:US)
Productivity
Algal biomasses. Final report, 8: 17574 (R:US)
Radionuclide Kinetics
Bibliographical review of radioactive cesium uptake capacity and processes in aquatic plants, 8: 18772 (R:FR:In French)
Translocation of radionuclides absorbed by the roots (redistribution) and subsequent release from leaves into the atmosphere (biological resuspension), 8: 18879 (BA:XE)

ALGEBRA
Identity from classical invariant theory, 8: 19392 (J:US)

ALGEBRAIC FIELD THEORY
Lie Groups
Deformation of the Lie-admissible pseudo-octonion algebra into the octonion algebra, 8: 19128 (J:US)
Octonion as traceless 3 x 3 matrices via a flexible Lie-admissible algebra, 8: 19129 (J:US)

ALGERIA
Economic Growth
Long-term energy planning for Algeria, 8: 18070 (BA:US)
Energy Policy
Long-term energy planning for Algeria, 8: 18070 (BA:US)

ALLUVIAL DEPOSITS
Coatings
Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed, 8: 19023 (J:GB)
Compression Strength
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Isotope Dating
Tephrostratigraphy and potassium-argon age determinations of seven volcanic ash layers in the Muddy Creek formation of southern Nevada, 8: 19004 (R:US)
Permeability
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Poisson Ratio
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Porosity
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Stratigraphy
Tephrostratigraphy and potassium-argon age determinations of seven volcanic ash layers in the Muddy Creek formation of southern Nevada, 8: 19004 (R:US)
Tensile Properties
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Thermal Stresses
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Young Modulus
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

ALPHA PARTICLES
Emitted by nuclei.
Dosimetry
Underlying parameters in dosimetry, 8: 19250 (BA:XE)
Energy Losses
Fundamental dosimetric studies with slow heavy charged particles, 8: 19252 (BA:XE)
Theoretical and experimental study on the ionizing energy loss modes of charged particles in matter. Consequences for microdosimetry, radiobiology and nuclear medicine, 8: 19249 (BA:XE)
Underlying parameters in dosimetry, 8: 19250 (BA:XE)
Particle Tracks
Radiation spectrometry and microdosimetric studies, 8: 19257 (BA:XE)
RBE
Direct and indirect radiation effects on DNA of eukaryotic cells and their repair, 8: 18906 (BA:XE)
Stopping Power
Stopping power of Ni, Ag, Au and Pb for ~ 7 MeV/n α-particles and carbon ions (Z_1^3 proportional deviation from the Bethe formula), 8: 19212 (RA:US)

ALPHA REACTIONS
Cross Sections
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Inelastic Scattering
Experimental evidence for giant multipole resonances at high excitation energies, 8: 19180 (R:FR)
Nuclear Potential
Generalized optical potentials of light particle interaction with 1p shell nuclei, 8: 19149 (RA:SU:In Russian)

ALPHA SOURCES
Radiation Monitoring
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)

ALPHA SPECTROSCOPY
Surface Barrier Detectors
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
ALPHA-BEARING WASTES
Certification
Quality assurance requirements for certification of TRU waste for shipment to the WIPP, 8: 17421 (R:US)
Detection
Detection and determination of alpha content of waste, 8: 17348 (RA:US)
Inventories
Physical description and quantities of alpha-contaminated waste from defense sources, 8: 17347 (RA:US)
Isotope Ratio
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Leaching
Comparison of the leachability of three TRU cement waste forms, 8: 17403 (R:US)
Leach tests of simulated low-level transuranic waste forms containing transuranic elements, 8: 17364 (R:US)
Packaging
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8: 17408 (R:US)
Radiation Hazards
Radiological hazards from alpha-contaminated waste, 8: 17349 (RA:US)
Transport
Transportation of alpha-contaminated waste, 8: 17339 (RA:US)
ALTERNATE FUELS
See SYNTHETIC FUELS
ALUMINIA
See ALUMINIUM OXIDES
ALUMINIUM
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Possibility of elementarl analysis by complex neutron and γ-activation methods with high-current accelerator, 8: 18314 (RA:SU:In Russian)
Charged-Particle Transport
Effective charge of energetic ions in metals, 8: 19223 (RA:US)
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)
Environmental Transport
Chemical transport beneath a uranium mill tailings pile, Riverton, Wyoming, 8: 17426 (R:US)
Consequences of sulfuric acid inputs to a forest soil, 8: 18715 (BA:US)
PIXE Analysis
Preliminary data on atmospheric aerosol of the Amazon basin, 8: 18604 (R:BR)
Trace-elements of the atmospheric aerosol of the Amazon basin, 8: 18602 (R:BR)
Proton Transport
Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons, 8: 19209 (RA:US)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
ALUMINIUM 27 TARGET
Neon 20 Reactions
Energy transfer in deeply inelastic collisions with ^{20}Ne at 151 MeV, 8: 19156 (R:FR)
Neutron Reactions
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Sulfur 32 Reactions
Identification of new isotopes with a time-of-flight mass spectrometer and total β^+ decay energy measurement of these nuclei in the deformation region N=Z=40, 8: 19155 (R:FR:In French)
ALUMINIUM ALLOYS
Oxidation
Kinetics and morphology of the oxide growth by oxidation of NiAl coatings on nickel, 8: 18259 (R:US)
ALUMINIUM NITRIDES
Sintering
DARPA dynamic synthesis program: Sandia National Laboratories' program on shock-activated sintering. Second quarterly report, 8: 18281 (R:US)
ALUMINIUM OXIDES
Catalytic Effects
Surface spectroscopic characterization of cobalt-molybdenum-alumina catalysts, 8: 18341 (J:US)
Ion Collisions
Interaction of hydrogen molecular ions with thin foils. III. Inner-shell ionization, 8: 19061 (RA:US)
Photoacoustic Spectroscopy
Photoacoustic spectroscopy of chemically modified surfaces. Doctoral thesis, 8: 18306 (R:US)
Sintering
DARPA dynamic synthesis program: Sandia National Laboratories' program on shock-activated sintering. Second quarterly report, 8: 18281 (R:US)
Structural Chemical Analysis
Surface spectroscopic characterization of cobalt-molybdenum-alumina catalysts, 8: 18341 (J:US)
ALUMINIUM SILICATES
Lung Clearance
Dosimetry of internal emitters, 8: 18933 (BA:XE)
Retention

Leach tests of simulated low-level transuranic waste forms containing transuranic elements, 8: 17364 (R:US)
Nuclear Reaction Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Radioecological Concentration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)
Radioecological investigations of an environmental contamination with transuranic elements, 8: 18779 (BA:XE)

Radionuclide Migration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}Pu$, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)

AMERICIUM 241 TARGET
Neutron Reactions
Application of the coupled-channel optical model to the calculation of fast neutron cross sections on odd-A actinide nuclei, 8: 19187 (R:FR:In French)

AMINES
See also MEA
THIAMINE
Complexometry
Kinetics of complexation and oxidation of ethanolamine and diols by silver(II), 8: 18352 (J:US)
Oxidation
Kinetics of complexation and oxidation of ethanolamine and diols by silver(II), 8: 18352 (J:US)

AMINO ACIDS
Organic acids containing both a basic amino group and an acidic carboxyl group.
See also CYSTEINE
GLUTAMIC ACID
Biosynthesis
Membrane reactors for continuous coenzyme regeneration, 8: 18816 (RA:US)

AMINO ALCOHOLS
See ALCOHOLS
AMINES

AMINO SUGARS
See AMINES

AMINOETHANETHIOL
See MEA

AMINOGLUTARIC ACID-ALPHA
See GLUTAMIC ACID

AMINOGLYCIDES
See AMINES

AMMONIA
Air Pollution Control
Preliminary air pollution survey of ammonia: a literature review, 8: 18640 (R:US)
Chemical Reactions
Kinetic measurements for the reaction of NH_2 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)
Monitoring
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)

AMP
Radiosensitivity Effects
Influence of agents encountered in normal physiology on the capacity of cells to repair and recover from radiation damage, 8: 18901 (BA:XE)

ANADROMOUS FISHES
Mortality
Potential effects of Kaplan, Ossberger and bulb turbines on anadromous fishes of the northeast United States, 8: 17528 (R:US)

ANAEROBIC DIGESTION
Chemical Reactors
Future trends in digester design, 8: 17498 (BA:GB)

ANALOG-TO-DIGITAL CONVERTERS
Engineering Drawings
BADC: semi-autonomous controller for data acquisition, the brilliant ADC (Engineering Materials), 8: 18554 (E:US)

ANALYSIS (ACTIVATION)
See ACTIVATION ANALYSIS

ANALYSIS (GAS)
See GAS ANALYSIS

ANALYSIS (QUANTITATIVE CHEMICAL)
See QUANTITATIVE CHEMICAL ANALYSIS

ANCHORS
Design
USNRC anchor bolt study data survey and dynamic testing. Final report, 8: 18460 (R:US)
Mechanical Tests
USNRC anchor bolt study data survey and dynamic testing. Final report, 8: 18460 (R:US)

ANDESITES
Rock-Fluid Interactions
Rock-brine chemical interactions. Final report, 8: 17726 (R:US)

ANDROSTENEDIONE
Radioimmunoassay
Determination of the radioimmunologic concentration of 5-androstene-3β-17β-diole in the blood plasma of patients suffering from common psoriasis, 8: 18832 (R:DE:In German)

ANEMOMETERS
Performance Testing
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report (PWR; BWR), 8: 17799 (R:US)

ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY
BLOOD VESSELS

ANGRA-1 REACTOR
Reactor Accidents
First accident simulation for Angra-1 power plant using the ALMOD computer code, 8: 17917 (R:BR:In Portuguese)

ANGRA-2 REACTOR
Containment Buildings
Analysis of the metallic containment integrity of Angra 2/3 reactor under the effects of the design basis accident, 8: 17918 (R:BR:In Portuguese)
Loss of Coolant
Analysis of the metallic containment integrity of Angra 2/3 reactor under the effects of the design basis accident, 8: 17918 (R:BR:In Portuguese)

ANGRA-3 REACTOR
Loss of Coolant
Analysis of the metallic containment integrity of Angra 2/3 reactor under the effects of the design basis accident, 8: 17918 (R:BR:In Portuguese)

ANHARMONIC OSCILLATORS
Ground States
Large-order expansion for the anharmonic oscillators, 8: 19274 (R:FR)

ANIMAL CELLS
Includes human cells.
See also SOMATIC CELLS
Biological Radiation Effects
Radiation spectrometry and microdosimetric studies, 8: 19257 (BA:XE)
Cell Cycle
Cell-cycle patterns of mutation induction and their relationship to DNA repair, 8: 18960 (R:US)
Cell Killing
Cytogenetic studies of lung cells following inhalation of fly ash, chemical mutagens, and effluents from power-related industry, 8: 18969 (R:US)
Chromosomal Aberrations
Cytogenetic studies of lung cells following inhalation of fly ash, chemical mutagens, and effluents from power-related industry, 8: 18969 (R:US)
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
Genetic Radiation Effects
Assessment and analysis of genetic damage in eukaryotes, 8: 18900 (BA:XE)
Effects of radiation on genetic and biochemical systems, 8: 18883 (BA:XE)
Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells, 8: 18902 (BA:XE)
Studies on induced chromosome aberrations and chromosome structure, 8: 18904 (BA:XE)
Morphological Changes
Cytogenetic studies of lung cells following inhalation of fly ash, chemical mutagens, and effluents from power-related industry, 8: 18969 (R:US)

Mutagenesis
Studies on the relationship between repair mechanisms of radiation damage in DNA and oncogenic transformation, 8: 18885 (BA:XE)
Oncogenic Transformations
Effects of radiation and chemicals on SV40 oncogenesis. Final progress report, 8: 18855 (R:US)
Studies on the relationship between repair mechanisms of radiation damage in DNA and oncogenic transformation, 8: 18885 (BA:XE)
Radiosensitivity
Genetic and biochemical basis of radiation sensitivity in human and other cells in culture, 8: 18892 (BA:XE)
Genetical and biochemical analysis of the radiosensitivity of eukaryotic cells, 8: 18909 (BA:XE)
Identify and characterize variant strains of mammalian cells deficient in repair of DNA damage, 8: 18890 (BA:XE)
Sister Chromatid Exchanges
Cytogenetic studies of lung cells following inhalation of fly ash, chemical mutagens, and effluents from power-related industry, 8: 18969 (R:US)

ANIMAL FEEDS
Radiation Protection
Background for protective action recommendations: accidental radioactive contamination of food and animal feeds. Final report, 8: 18867 (R:US)

ANIMAL SHELTERS
Heat Exchangers
Dual tube, counter-flow heat exchange for turkey barns. First quarterly report, 8: 18181 (R:US)
Waste Heat Utilization
Dual tube, counter-flow heat exchange for turkey barns. First quarterly report, 8: 18181 (R:US)

ANIMAL TISSUES
See also BONE MARROW
RETICULOENDOTHELIAL SYSTEM
Ontogenesis
Cellular and genetic analysis of mouse blastocyst development, 8: 18823 (BA:US)
Ultrastructural Changes
Cellular and genetic analysis of mouse blastocyst development, 8: 18823 (BA:US)

ANOXIA
Radiosensitivity Effects
Influence of agents encountered in normal physiology on the capacity of cells to repair and recover from radiation damage, 8: 18901 (BA:XE)

ANTHRACENE
Acoustic ESR
Electron spin echo modulation of the photoexcited triplets of anthracene in p-terphenyl crystals, 8: 18362 (J:US)
Excited States
Electron spin echo modulation of the photoexcited triplets of anthracene in p-terphenyl crystals, 8: 18362 (J:US)
Photochemistry
Electron spin echo modulation of the photoexcited triplets of anthracene in p-terphenyl crystals, 8: 18362 (J:US)

ANTIMONY 121 TARGET
Argon 40 Reactions
Identification of new isotopes with a time-of-flight mass spectrometer and total βi decay energy measurement of these nuclei in the deformation region N=Z=40, 8: 19155 (R:FR:In French)

ANTIMONY COMPOUNDS
See also ANTIMONY FLUORIDES
ANTIMONY OXIDES
Chemical Preparation
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Chemical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Physical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)

ANTIMONY FLUORIDES
Chemical Preparation
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Chemical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Physical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)

ANTIMONY OXIDES
Chemical Preparation
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Chemical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Physical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)

ANTIPROTON REACTIONS
Total Cross Sections
Cross sections of low-energy anti pD interaction, 8: 19138 (R:SU)

ANTIPROTONS
Pair Production
Radiative production of anti pNsub(3/2)* - pair in electron-positron colliding beams, 8: 19105 (RA:SU:In Russian)

ANTRIM SHALES
See BLACK SHALES

APARTMENT BUILDINGS
Energy Conservation
Innovative financing for energy-efficiency improvements: model documents and financial projections. Phase II report, 8: 18047 (R:US)

APPARATUS
See EQUIPMENT

APPLE COMPUTERS
Equipment Interfaces
Connecting your Apple to Octopus 7600's, 8: 19387 (R:US)

APPLICATORS (RADIOTHERAPY)

SEAWEEDS
WATER HYACINTHS
Radionuclide Kinetics
Bibliographical review of radioactive cesium uptake capacity and processes in aquatic plants, 8: 18772 (R:FR:In French)

Investigation for the evaluation of the impact of nuclear plants discharges in the marine environment, under the environmental and health protection standpoints, 8: 18777 (BA:XE)

AQUICULTURE
See AQUACULTURE

AQUIFERS
Isotope Ratio
Chemical transport beneath a uranium mill tailings pile, Riverton, Wyoming, 8: 17426 (R:US)
Sensible Heat Storage
Preliminary study of adiabatic compressed-air energy storage in aquifers (Performance analysis using CYCLOPS computer code), 8: 17966 (R:US)

ARAB REPUBLIC OF EGYPT
See EGYPTIAN ARAB REPUBLIC

ARAMIDS
Amination
Amine plasma modification of polyaramid filaments, 8: 18292 (R:US)

ARCHAEOLOGICAL SPECIMENS
Activation Analysis
Radiochemical investigations of trace elements in ancient metals, 8: 18322 (R:US)

ARGON
Atom-Atom Collisions
Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/s, 2/super 3/s) state with Ar in the thermal energy range, 8: 19069 (R:DE:In German)
Measurement of the differential scattering cross sections of electron excited sodium by argon, 8: 19068 (R:DE:In German)
Atom-Molecule Collisions
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8: 19051 (R:US)
Charged-Particle Transport
Stopping power of rare gases in amorphous silicon for MeV helium ions, 8: 19216 (RA:US)
Tabulation of heavy-ion stopping powers for gas detectors, 8: 18527 (R:IT)
Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
Electron-Atom Collisions
Electron excitation of O_2 metastables in O_2-N_2 mixtures and of free-free radiation in argon. Final report oct 80-sep 81, 8: 19050 (R:US)
Frenkel Defects
Production and recombination of radiation defects in argon and krypton crystals, 8: 18300 (R:DE:In German)
Ion-Atom Collisions
Simultaneous electron capture and excitation in ion-atom collisions, 8: 19053 (R:US)
Physical Radiation Effects
Production and recombination of radiation defects in argon and krypton crystals, 8: 18300 (R:DE:In German)
Thermal Conductivity
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
Thermal Diffusion
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)

ARGON 40 REACTIONS
Fusion Reactions
Identification of new isotopes with a time-of-flight mass spectrometer and total β^+ decay energy measurement of these nuclei in the deformation region N=Z=40, 8: 19155 (R:FR:In French)

ARGON 41
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

ARGON IONS
Effective Charge
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)
Ion-Atom Collisions
Simultaneous electron capture and excitation in ion-atom collisions, 8: 19053 (R:US)
Stopping Power
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)

ARKANSAS
Electric Utilities
Developer handbook for Section 210 of PURPA for Arkansas, 8: 18091 (R:US)
Public Utility Commission manual for Section 210 of PURPA for Arkansas, 8: 18084 (R:US)
Lakes
Norfork Lake, Arkansas, temperature analysis; mathematical model investigation. Final report Jan-Jun 81, 8: 17526 (R:US)
Water Requirements
Estimating water demand schedules for selected industries in Arkansas, 8: 18028 (R:US)

ARKANSAS POWER-LIGHT-1 REACTOR

TOLUENE
XYLENES
Combustion
Effect of flame temperature and fuel composition on sooting tendency in a research combustor. Interim report Jun 80-Oct 81, 8: 17253 (R:US)
Hydrogenation
Applications of functionalized polymers in catalysis. Final report, September 1, 1977-November 30, 1981, 8: 18349 (R:US)
Mass Spectroscopy
Characterization of coal-liquefaction fractions. Final report, 8: 17022 (R:US)

ARSENATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Absorption Spectroscopy
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)
Liquid Column Chromatography
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

ARSENIC
Absorption Spectroscopy
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

Liquid Column Chromatography
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

ARSENIC COMPLEXES
Synthesis
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

ARSENIC IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s²3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)

ARSONIC ACIDS
Absorption Spectroscopy
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)
Liquid Column Chromatography
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

ARTERIES
Biomedical Radiography
Animal experimental study on the roentgen densitometric determination of the arterial circulation conditions, 8: 18812 (R:DE:In German)
Blood Flow
Animal experimental study on the roentgen densitometric determination of the arterial circulation conditions, 8: 18812 (R:DE:In German)

ASCORBIC ACID
Radiosensitivity Effects
Influence of agents encountered in normal physiology on the capacity of cells to repair and recover from radiation damage, 8: 18901 (BA:XE)

ASHES
See also FLY ASH
Agglomeration
Coal-gasification research studies. Quarterly report, August 20-November 19, 1982, 8: 17029 (R:US)
Chemical Analysis
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)
Chemical Composition
Agglomeration of SRC residues (Kerr-McGee CSD ash concentrate), 8: 17045 (RA:US)
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Desashing
Agglomeration of SRC residues (Kerr-McGee CSD ash concentrate), 8: 17045 (RA:US)
Deposition
Combustion-turbine design guidelines based on deposition-corrosion considerations. Volume 1. Residual-fuel-oil studies. Final report, 8: 17254 (R:US)
Electron Microprobe Analysis
Application of PIXE, RBS and high energy proton microbeams to the elemental analysis of coal and coal waste, 8: 17098 (BA:US)
Leaching
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Materials Handling
Pneumatic dense-phase shipboard coal and ash conveying storage and bunkering systems for coal-fired ships (technical application manual). Final report Mar 81-May 82, 8: 17177 (R:US)
Melting
Coal-gasification research studies. Quarterly report, August 20-November 19, 1982, 8: 17029 (R:US)
Proton Microprobe Analysis
Application of PIXE, RBS and high energy proton microbeams to the elemental analysis of coal and coal waste, 8: 17098 (BA:US)
X-Ray Fluorescence Analysis
Application of PIXE, RBS and high energy proton microbeams to the elemental analysis of coal and coal waste, 8: 17098 (BA:US)
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)

ASPERGILLUS
Genetic Radiation Effects
Assessment and analysis of genetic damage in eukaryotes, 8: 18900 (BA:XE)

ASPHALTENES
Chemical Analysis
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

ASSETS
See FINANCIAL DATA

ASTHMA
Epidemiology
Evaluation of CHESS: Utah asthma study, 1971-1972. Final report, 8: 18601 (R:US)

ASTROPHYSICS
Data Acquisition
Automated data retrieval in astronomy. Proceedings of the 64th colloquium of the International Astronomical Union held in Strasbourg, France, July 7-10, 1981, 8: 19041 (B:NL)
Meetings

AUTOCLAVES
Design
Microautoclave studies. Part I: the effect of microautoclave mixing and workup procedure on microautoclave coal conversion. Part II: the effect of basic-nitrogen solvents on coal conversion (Standardization of design and analytical techniques used on products), 8: 17039 (RA:US)

AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES STANDARDS

AUTOMOBILES
Certification
Application for certification 1982 model year light-duty vehicles - Isuzu, 8: 18223 (R:US)
Application for certification 1982 model year light-duty vehicles - Mazda (Toyo Kogyo), 8: 18224 (R:US)
Application for certification 1982 model year light-duty vehicles - Saab-Scania, 8: 18225 (R:US)
Exhaust Gases
Application for certification 1982 model year light-duty vehicles - Chrysler Corporation, 8: 18170 (R:US)
Effect of low cost repairs on I/M failed vehicles, 8: 18239 (R:US)
Medium duty vehicle emission control cost effectiveness comparisons. volume i. executive summary. Final report, 8: 18238 (R:US)
Exhaust Systems
Development of quiet low back pressure exhaust silencers on two saloon cars using a performance prediction computer program. Final report, 8: 18129 (R:US)
Fuel Consumption
Development of quiet low back pressure exhaust silencers on two saloon cars using a performance prediction computer program. Final report, 8: 18129 (R:US)
Fuel Economy
Fuel economy: some effects of driver characteristics and vehicle type, 8: 18176 (R:US)
Maintenance
Effect of low cost repairs on I/M failed vehicles, 8: 18239 (R:US)
Materials
Potential of composite materials in surface transportation applications, 8: 18293 (R:US)
Performance
Effects of fuel volatility on driveability of 1980 model cars at low and intermediate ambient temperature, 8: 17248 (R:US)
Repair
Effect of low cost repairs on I/M failed vehicles, 8: 18239 (R:US)
Specifications
Application for certification 1982 model year light-duty vehicles - Chrysler Corporation, 8: 18170 (R:US)

AUTOMOTIVE ACCESSORIES
Technology Assessment
The effect of add-on devices and engine treatment on fuel consumption. Final report, 8: 18220 (R:US)

AUTOMOTIVE FUELS
Antiknock Ratings
Effect of combustion-chamber/fuel combination on high-speed knock. Final report, 8: 18219 (R:US)
Combustion
Combustion losses in automotive spark ignition and diesel engines, 8: 18217 (R:US)
Fuel Additives
Assessment of water addition to spark ignition engines, 8: 18218 (R:US)
Fuel Substitution
Energy in road transportation. Technical report (South Africa), 8: 18177 (R:US)
Increased automobile fuel efficiency and synthetic fuels: alternatives for reducing oil imports, 8: 17255 (R:US)
Ignition Quality
Effect of combustion-chamber/fuel combination on high-speed knock. Final report, 8: 18219 (R:US)
Volatility
Effects of fuel volatility on driveability of 1980 model cars at low and intermediate ambient temperature, 8: 17248 (R:US)

BARC
Research Programs
Bio-Organic Division progress report, July 1977-1979, 8: 18811 (R:IN)
BARIUM
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Distribution Functions
Barium and radium migration in unconsolidated Canadian geological materials, 8: 18720 (R:CA)
Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
BARIUM 133
Excretion
Decorporation of radionuclides, 8: 18946 (BA:XE)
BARIUM 140
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
BARIUM ISOTOPES
See also BARIUM 133
BARIUM 140
Alpha Decay
Alpha-decay half-lives of neutron-deficient trans-tin isotopes, 8: 19175 (R:RO)
BARNWELL FUEL PROCESSING PLANT
Radioactive Waste Management
Alpha-contaminated waste from reprocessing of nuclear fuel, 8: 17350 (RA:US)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Control Equipment
10-MWe solar-thermal central-receiver pilot plant, solar-facilities design integration: plant maintenance/training manual (RADL Item 2-37). Section 3. Electrical apparatus, 8: 17641 (R:US)
Electrical Equipment
10-MWe solar-thermal central-receiver pilot plant, solar-facilities design integration: plant maintenance/training manual (RADL Item 2-37). Section 3. Electrical apparatus, 8: 17641 (R:US)
Heliostats
Solar Pilot Plant Phase I, detailed design report: collector subsystem research experiment. CDRL Item No. 6 (Approved), 8: 17638 (R:US)
Pressure Gages
10-MWe solar-thermal central-receiver pilot plant, solar-facilities design integration: plant maintenance/training manual (RADL Item 2-37). Section 5. Process instrumentation, Book 1 of 2, 8: 17646 (R:US)
Specifications
Functional and performance characteristics for the 10-MWe solar-thermal central-receiver pilot plant, 8: 17635 (R:US)
Thermometers
10-MWe solar-thermal central-receiver pilot plant, solar-facilities design integration: plant maintenance/training manual (RADL Item 2-37). Section 5. Process instrumentation, Book 1 of 2, 8: 17646 (R:US)
BARTLESVILLE ENERGY TECHNOLOGY CENTER
Research Programs
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8: 17213 (R:US)
BARYON RESONANCES
*See also N*RESONANCES*
Particle Decay
SU(3) symmetry breaking in the decays of baryons, 8: 19115 (J:US)
BASALT
Chemical Analysis
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
Compression Strength
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Data Acquisition
Automated data acquisition and analysis system used in the Basalt Waste Isolation Project's Near-Surface Test Facility, 8: 17409 (R:US)
Data Analysis
Automated data acquisition and analysis system used in the Basalt Waste Isolation Project's Near-Surface Test Facility, 8: 17409 (R:US)
Permeability
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Poisson Ratio
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Porosity
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Rock Mechanics
Automated data acquisition and analysis system used in the Basalt Waste Isolation Project's Near-Surface Test Facility, 8: 17409 (R:US)
Rock-Fluid Interactions
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
Rock-brine chemical interactions. Final report, 8: 17726 (R:US)
Sorptive Properties
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
Tensile Properties
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Thermal Stresses
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Young Modulus
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERIES (ISOTOPIC)
See RADIOISOTOPE BATTERIES
BATTERY CHARGERS
Monitoring
An evaluation of commercial battery discharge indicators. Final report, 8: 17975 (R:US)
BATTERY SEPARATORS
Research Programs
Development of improved separators for alkaline zinc batteries, 8: 17978 (R:US)
BAYS
Hydrology
Phytoplankton ecology of the Saronicos Gulf, Aegean Sea. Data report - Year 1980. Part 1. Hydrography, 8: 18739 (R:GR)
BEAM BENDING MAGNETS
Control Systems
Resonant circuit which provides dual-frequency excitation for rapid cycling of an electromagnet, 8: 18492 (P:US)
Power Supplies
Pole face winding thyristor power supplies as used for Nimrod, 8: 18490 (R:US)

BEAM MONITORS
Specifications
Single turn integrator (Engineering Materials), 8: 18516 (E:US)
BEAM STRIPPERS
Design
Liquid-film electron stripper, 8: 18499 (P:US)
BEAM-FOIL SPECTROSCOPY
See ION SPECTROSCOPY
BEAM-GAS SPECTROSCOPY
See ION SPECTROSCOPY
BEAM-PLASMA SYSTEMS
Hose Instability
Influence of centering forces on IFR hose instability, 8: 19300 (R:US)
Plasma Instability
Effects of ion-acoustic instability on ligh-ion-beam transport in deuterium channels, 8: 19293 (R:US)
BELGIUM
Radioactive Waste Management
Foreign experience in alpha-contaminated waste disposal, 8: 17354 (RA:US)
BENTONITE
Rock-Fluid Interactions
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
Sorptive Properties
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
BENZENE
Biological Effects
Carcinogen assessment group's final report on population risk to ambient benzene exposures. Final report, 8: 18977 (R:US)
Chemical Reaction Kinetics
Rates of reactions of $O(^3P)$ with benzene and toluene, 8: 18353 (J:US)
Pyrolysis
Identification and temporal behavior of radical intermediates formed during the combustion and pyrolysis of gaseous fuels: kinetic pathways to soot formation. Progress report, September 1, 1982-June 30, 1983, 8: 18385 (R:US)
BENZOPHENONE
Photolysis
Actinometry in monochromatic flash photolysis: the extinction coefficient of triplet benzophenone and quantum yield of triplet zinc tetraphenyl porphyrin, 8: 18360 (R:US)
BERKELEY SUPERHILAC
See SUPERHILAC
BERYLLIUM
Absorption Spectroscopy
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Biological Effects
Preliminary air pollution survey of beryllium and its compounds: a literature review, 8: 18978 (R:US)
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Pollution Sources
Preliminary air pollution survey of beryllium and its compounds: a literature review, 8: 18978 (R:US)
Proton Transport
Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons, 8: 19209 (RA:US)
BERYLLIUM COMPOUNDS
Biological Effects
Preliminary air pollution survey of beryllium and its compounds: a literature review, 8: 18978 (R:US)
BERYLLIUM MODERATORS
See BERYLLIUM
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DOSIMETRY
Dose Equivalents
Development of a rationalized approach to the measurement of external beta and gamma radiation for radiation protection purposes, 8: 19256 (BA:XE)
BETATRONS
Stability
Modified betatron stability calculations. Interim report, 8: 18487 (R:US)
BEVERAGES
Chemical Analysis
Determination of low papain concentrations in beer, 8: 18311 (RA:CS:In Czech)
BHABHA ATOMIC RESEARCH CENTER
See BARC
BIBLIS REACTOR
See BIBLIS-A REACTOR
BIBLIS-A REACTOR
Emergency Plans
Report of experiences by practicing emergency provisions around Biblis reactor in May 3, 1980, 8: 18017 (R:DE:In German)
BIBLIS-B REACTOR
Emergency Plans
Report of experiences by practicing emergency provisions around Biblis reactor in May 3, 1980, 8: 18017 (R:DE:In German)
BI-GAS PROCESS
Heat Losses
Computer analysis of entrainment flow gasification phenomena. Quarterly technical progress report No. V, August 10, 1982-November 9, 1982, 8: 17027 (R:US)
Mathematical Models
Computer analysis of entrainment flow gasification phenomena. Quarterly technical progress report No. V, August 10, 1982-November 9, 1982, 8: 17027 (R:US)
Pilot Plants
Computer analysis of entrainment flow gasification phenomena. Quarterly technical progress report No. V, August 10, 1982-November 9, 1982, 8: 17027 (R:US)
BINARY MIXTURES
Thermal Conductivity
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
Thermal Diffusion
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
BINARY-FLUID SYSTEMS
Degassing
Multi-stage flash degaser (Patent), 8: 17714 (P:US)
BIOASSAY
Paramecium
Paramecium tetraurelia pre-screen for hazardous chemicals: a rapid detector system for health hazards. 1977-1983 report, 8: 18962 (R:US)
BIOLOGICAL EFFECTS
Bibliographies
Aerospace medicine and biology. A continuing bibliography with indexes, 8: 19000 (R:US)
Energy Policy
Institute for Energy Analysis research report 1982, 8: 18805 (R:US)
BIOLOGICAL MATERIALS
Activation Analysis
Activation analytical determination of essential and toxic trace elements in biological material, 8: 18312 (R:DE:In German)
Chemical Analysis
Quality assurance for environmental analytical chemistry: 1981, 8: 18317 (R:US)
BIOLOGICAL REPAIR
Enzyme Activity
Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells, 8: 18818 (BA:XE)
Inhibition
Identify and characterize variant strains of mammalian cells deficient in repair of DNA damage, 8: 18890 (BA:XE)

Radioinduction
Radiation- and drug-induced DNA repair in mammalian oocytes, 8: 18954 (BA:US)

BIOLOGICAL STRESS
Radiosensitivity Effects
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding, 8: 18864 (R:US)

BIOLOGICAL TESTING
See BIOASSAY

BIOMASS
Energy agriculture, 8: 17562 (R:US)
Biothermgas Process
Gasification of land-based biomass. Annual report jan-dec 81, 8: 17493 (R:US)
Carbonization
Carbonization of biomass, 8: 17549 (RA:DE:In German)
Environmental Impacts
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Fluidized Bed Refuse Gasification
Biomass gasification, 8: 17553 (RA:DE:In German)
Gasification
Biomass gasification, 8: 17551 (RA:DE:In German)
Biomass gasification, 8: 17553 (RA:DE:In German)
Concepts for decentralised energy generation with biomass gasification, 8: 17557 (RA:DE:In German)
Experience from biomass gasification on the Seychelles, 8: 17556 (RA:DE:In German)
Gasification of biomass in fluidized bed, 8: 17559 (RA:DE:In German)
Obtaining energy from biomass using low BTU gas generators, 8: 17555 (RA:DE:In German)
Pyrolysis and gasification of biomass - survey, 8: 17547 (RA:DE:In German)
Inventories
Handbook for inventorying surface fuels and biomass in the interior West. General technical report, 8: 17578 (R:US)
Multiresource inventories: techniques for estimating biomass on a statewide basis. Forest service research paper, 8: 17577 (R:US)
Pyrolysis
Pyrolysis and gasification of biomass - survey, 8: 17547 (RA:DE:In German)
Risk Assessment
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Water Requirements
Assessment of water use impacts from solar-energy development, 8: 17538 (R:US)

BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Obtaining combustible gas from biomass and plastic waste, 8: 17552 (RA:DE:In German)
Computer-Aided Design
Chemical feedstocks from hardwood by organosolv hydrolysis: computer-aided process design and economic evaluations, 8: 17512 (RA:US)
Testing
Experience from biomass gasification on the Seychelles, 8: 17556 (RA:DE:In German)

BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Densitometers
Animal experimental study on the roentgen densitometric determination of the arterial circulation conditions, 8: 18812 (R:DE:In German)
Dosimetry
Spectral and physical factors in x-ray diagnosis, 8: 19258 (BA:XE)
Planning
High-yield criteria for panoramic radiography. Final report, 8: 18837 (R:US)
Radiation Doses
Exposure to radiation from medical diagnostic procedures general description of work carried out from 1976 to 1980, 8: 18948 (BA:XE)
Exposure to radiation from medical diagnostic procedures, 8: 18949 (BA:XE)
X-Ray Spectra
Spectra and physical factors in x-ray diagnosis, 8: 18841 (BA:XE)
Spectral and physical factors in x-ray diagnosis, 8: 19258 (BA:XE)

BIOTHERMGAS PROCESS
Gasification of land-based biomass. Annual report jan-dec 81, 8: 17493 (R:US)

BIPYRIDINES
Catalytic Effects
Synthesis and characterization of structured interfaces for hydrogen generation. Study of an N,N'-dialkyl-4,4'-bipyridinium redox polymer/palladium catalyst system, 8: 17485 (J:US)
Photolysis
Interfacial electron-transfer reactions in colloidal semiconductor dispersions. Kinetic analysis, 8: 18343 (J:US)
Synthesis
Synthesis and characterization of structured interfaces for hydrogen generation. Study of an N,N'-dialkyl-4,4'-bipyridinium redox polymer/palladium catalyst system, 8: 17485 (J:US)

BITUMENS
Production
Mine-assisted in situ project: an update (Alberta, Canada), 8: 17303 (BA:US)
Reserves
Availability of heavy crudes in Latin America, 8: 17298 (BA:US)
Prospects for the development and production of heavy crude oil reserves in Nigeria, 8: 17204 (BA:US)

BITUMINOUS COAL
Carbonization
A study of the influence of the addition of coal-tars to vitrains on the optical anisotropy developed during carbonization. Carbonization research report (final), 8: 17056 (R:US)
Comparative Evaluations
Comparative study of five Canadian coals in a laboratory gasifier, 8: 17075 (B:CA)
Hydrogenation
Integrated two-stage liquefaction process (ITSL) for the liquefaction of eastern bituminous coals (Illinois No. 6 and Indiana V), 8: 17068 (J:US)
Structural Chemical Analysis
Identification and cleavage of breakable single bonds by selective oxidation, reduction, and hydrolysis. Quarterly report No. 16, July 1-October 31, 1982, 8: 17083 (R:US)
Supercritical Gas Extraction
Supercritical gas extraction of Canadian coals, 8: 17073 (B:CA)

BLACK AMERICANS
Feasibility study to develop a marketing plan and strategy for increasing the participation of minority business enterprises and black colleges and universities in energy-related industries. Final report, 8: 17999 (R:US)
Affirmative Action
Feasibility study to develop a marketing plan and strategy for increasing the participation of minority business enterprises and black colleges and universities in energy-related industries, 8: 18000 (R:US)

BLACK COAL
See also BITUMINOUS COAL
Briquetting
Coal briquetting plant of Gewerkschaft Sophia-Jacoba with special regards to the production of briquettes binded by lignosulfonate, 8: 17174 (RA:DE)
Hydrogenation
Pre-feasibility study for construction of a commercial coal hydrogenation plant, 8: 17009 (R:DE:In German)

BLACK SHALES
Explosive Fracturing
Parameter sensitivity analysis of tailored-pulse loading stimulation of Devonian gas shale, 8: 17280 (R:US)

Geochemical Surveys
Statistical analysis of geochemical data for the Eastern Kentucky Gas Field, 8: 17259 (R:US)
Geologic Faults
Bedding-orientation contours of Middle Devonian shales exposed in the Middle Mountain syncline, Valley and Ridge province, West Virginia, 8: 17258 (R:US)
Hydraulic Fracturing
Hydraulic fracturing experiments in Devonian shale and pre-fractured hydrostone. Final report, 8: 17279 (R:US)
Mechanical Properties
Parameter sensitivity analysis of tailored-pulse loading stimulation of Devonian gas shale, 8: 17280 (R:US)
Natural Gas Deposits
Gas from shales rich in organic detritus, 8: 17288 (BA:US)
Permeability
Modeling of Devonian shale-gas reservoirs (conduct reservoir modeling for the Devonian shales). Final report, 8: 17269 (R:US)
Porosity
Modeling of Devonian shale-gas reservoirs (conduct reservoir modeling for the Devonian shales). Final report, 8: 17269 (R:US)

BLADES (COMPRESSOR)
See COMPRESSOR BLADES

BLADES (TURBINES)
See TURBINE BLADES

BLAST FURNACES
Air Pollution Control
Revised standards for basic oxygen process furnaces: background information for proposed standards, 8: 18703 (R:US)

BLASTING
See EXPLOSIVE FRACTURING

BLOOD CELLS
See also LEUKOCYTES
Biological Radiation Effects
Hematogical lesions as a function of dosage of long-term radiation, 8: 18863 (R:US)

BLOOD FORMATION
See also ERYTHROPOIESIS
Biological Repair
Changed rate of food intake as factor affecting radioresistance. II. Affecting post-irradiative lethality and blood formation recovery, 8: 18952 (B:CS:In Czech)

BLOOD VESSELS
See also ARTERIES
Delayed Radiation Effects
Measurements of early and late radiation reactions in normal tissues, 8: 18930 (BA:XE)
Early Radiation Effects
Measurements of early and late radiation reactions in normal tissues, 8: 18930 (BA:XE)

BOHUNICE V-2 REACTOR
District Heating
Heat supply of the town of Trnava from EBO nuclear plant, 8: 17889 (BA:CS:In Czech)

BOILER FUEL
See BOILER FUELS

BOILER FUELS
Fuel Substitution
Construction and operation of a prototype of a central-heating plant fired by coal dust corresponding to the system Schoppe, 8: 17182 (R:DE:In German)
Prices
Long-term, mid-term, and short-term fuel scheduling. Volume 3. Economic dispatch fuel price strategies. Final report, 8: 18107 (R:US)

BOILERS
Air Pollution Abatement
State-of-the-art combustion modification NOx control for stationary combustion equipment, 8: 17109 (R:US)
Air Pollution Control
NO/sub x/ emissions from pulverized-coal arch-fired boilers. Final report, 8: 17106 (R:US)
Design
NO/sub x/ emissions from pulverized-coal arch-fired boilers. Final report, 8: 17106 (R:US)
Modifications
State-of-the-art combustion modification NOx control for stationary combustion equipment, 8: 17109 (R:US)
Pollution Control Equipment
Costs of sulfur dioxide, particulate matter, and nitrogen oxide controls on fossil fuel fired industrial boilers. Final report, 8: 18482 (R:US)

BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS

BOLIVIA
Power Distribution Systems
New light on rural electrification: the evidence from Bolivia, 8: 18116 (R:US)

BONE MARROW
Biological Radiation Effects
Hematogical lesions as a function of dosage of long-term radiation, 8: 18863 (R:US)
Transplants
Bone marrow transplantation, 8: 18912 (BA:XE)
Consequences of radiation exposure: evaluation and treatment of pathological effects, 8: 18911 (BA:XE)
Human peripheral blood hemopoietic stem cell kinetics, migration, collection, preservation and transfusion after ionizing irradiation, 8: 18840 (BA:XE)
Protection against the pathological effects of high doses of irradiation by marrow grafting; immunological and pathological studies of the graft-versus-host reaction provoked by incompatibility for minor antigens, 8: 18910 (BA:XE)
Short-term effects of ionizing radiation on hemopoiesis and their treatment, 8: 18913 (BA:XE)

BONE MARROW CELLS
Biological Radiation Effects
Biological effects of incorporated isotopes and radiation of high ionization density, 8: 18873 (BA:XE)
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding, 8: 18864 (R:US)
Delayed Radiation Effects
Radiation and marrow aplasia: stem cell kinetics after prolonged or long-past radiation, 8: 18914 (BA:XE)
Shielding
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding, 8: 18864 (R:US)

BONE SEEKERS
Delayed Radiation Effects
Late somatic effects of ionizing radiation i the mammalian organism, 8: 18927 (BA:XE)
Pathogenesis of radiation damage, 8: 18929 (BA:XE)

BONE TISSUES
Dose-Response Relationships
Biologic dosimetry for nuclear environments by electron paramagnetic resonance (EPR) methods. Conference paper, 8: 18852 (R:US)

BONES
See SKELETON

BONNEVILLE POWER ADMINISTRATION
Energy Conservation
Conservation sourcebook, 8: 18046 (R:US)

BORON 10 TARGET
Neutron Reactions
Compact analytical representation of the ENDF/B-V evaluated cross sections for the $^{6}Li(n,\alpha)$, $^{10}B(n,\alpha_0)$, $^{10}B(n,\alpha_1)$, $^{10}B(n,\alpha)$ reactions, 8: 19148 (RA:SU:In Russian)

BORON ALLOYS
Raman Effect
Structural properties of amorphous metals by Raman scattering. Progress report, June 1, 1981-May 31, 1983, 8: 18250 (R:US)

BORON NITRIDES
Wettability
Method of enhancing the wettability of boron nitride for use as an electrochemical cell separator (Patent), 8: 18134 (P:US)

BPA
See BONNEVILLE POWER ADMINISTRATION

BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

BRAIN
Computerized Tomography
Twelve years nuclear medicine - results and outlook - illustrated by 7414 cerebral scintigrams, 8: 18833 (R:DE:In German)
Delayed Radiation Effects
Chronic irradiation and brain development. Final (4th) progress report, 8: 18854 (R:US)
Late somatic effects of ionizing radiation i the mammalian organism, 8: 18927 (BA:XE)
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
Metabolism
Effects of 200, 591 and 2450 mhz microwaves on cerebral energy metabolism, 8: 18985 (R:US)
Physiology
Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain, 8: 18845 (R:NO)
Positron Computed Tomography
Evidence for a caudate role in aphasia from FDG positron emission tomography, 8: 18828 (R:US)
Scintiscanning
Twelve years nuclear medicine - results and outlook - illustrated by 7414 cerebral scintigrams, 8: 18833 (R:DE:In German)
BRAKING RADIATION
See BREMSSTRAHLUNG
BRASS-ALPHA
Ion Channeling
Ion-channelling effects in scanning ion microscopy with a Ga^+ probe, 8: 19218 (RA:US)
Ion Microscopy
Ion-channelling effects in scanning ion microscopy with a Ga^+ probe, 8: 19218 (RA:US)
BRAYTON CYCLE POWER SYSTEMS
Design
Brayton isotope power system. Phase I (Ground demonstration system) configuration control document (CCD), 8: 17477 (R:US)
Radioisotope Heat Sources
Brayton isotope power system. Phase I (Ground demonstration system) configuration control document (CCD), 8: 17477 (R:US)
BRAZIL
Energy Policy
Three alternative energy scenarios for Brazil: 1980-2000, 8: 18069 (BA:US)
Oil Sand Deposits
Availability of heavy crudes in Latin America, 8: 17298 (BA:US)
Petroleum Deposits
Availability of heavy crudes in Latin America, 8: 17298 (BA:US)
BREAKWATERS
See DAMS
BREASTS
See MAMMARY GLANDS
BREMSSTRAHLUNG
Differential Cross Sections
Polarized tagged photons, 8: 19206 (R:FR)
BRINES
Geochemistry
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)
Materials Recovery
Recovery of metals from geothermal brine, 8: 17713 (P:US)
Sampling
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)
Underground Disposal
Characteristics and applications of Big Sandy River, Glenwood Springs, and Dotsero Springs waters in energy development, 8: 18763 (R:US)
Waste Product Utilization
Characteristics and applications of Big Sandy River, Glenwood Springs, and Dotsero Springs waters in energy development, 8: 18763 (R:US)
BROMINATED ALIPHATIC HYDROCARBONS
Chemical Reaction Kinetics
Studies of combustion kinetics and mechanisms. Progress report, January 1, 1982-December 31, 1982, 8: 18386 (R:US)
Mass Spectra
Computer processing of mass-spectral data. Part V. Assignment of formulas to experimental masses. Representative databases for program FZM, 8: 18348 (R:US)
BROMINE
Ecological Concentration
Time-series analysis for identification of particle-emission sources, 8: 18589 (R:US)
BROMINE 76
Beta Decay
Multipole composition of the ^{76}Se gamma transitions, 8: 19160 (RA:SU:In Russian)
BROMINE 79
Laser Isotope Separation
Interim report on modeling studies of two-photon isotope separation, 8: 18334 (R:US)
BROMINE BROMIDES
See BROMINE
BROOKHAVEN INTERSECTING STORAGE ACCELERAT
See ISABELLE STORAGE RINGS
BROWN COAL
See also LIGNITE
Comparative Evaluations
Comparative study of five Canadian coals in a laboratory gasifier, 8: 17075 (B:CA)
Supercritical Gas Extraction
Supercritical gas extraction of Canadian coals, 8: 17073 (B:CA)
BSF REACTOR
See BSR-1 REACTOR
BSR-1 REACTOR
Reactor Operation
Bulk Shielding Facility. Quarterly report, April-June 1982, 8: 17912 (R:US)
BSR-2 REACTOR
Reactor Operation
Bulk Shielding Facility. Quarterly report, April-June 1982, 8: 17912 (R:US)
BUBBLE CHAMBERS
Flying Spot Digitizers
HPD application for film processing from the BEBC bubble chamber at IHEP, 8: 18525 (R:SU:In Russian)
Methods and means for diagnostics in the bubble chamber picture measurement system for HPD IHEP, 8: 18526 (R:SU:In Russian)
Image Processing
HPD application for film processing from the BEBC bubble chamber at IHEP, 8: 18525 (R:SU:In Russian)
BUBBLE GROWTH
Heat Transfer
Computation of the bubble growth in pool boiling of liquids on heated surfaces as a numerical solution of the conservation equations, 8: 18450 (R:DE:In German)
BUDGETS
Budget estimates, fiscal year 1984/85. Appropriation: salaries and expenses, 8: 17868 (R:US)
BUILDING (CONSTRUCTING)
See CONSTRUCTION
BUILDING MATERIALS
See also CEMENTS
CONCRETES
Binders
Low-temperature-tar content of bituminous materials. Part 2. Dense tarmacadam basecourse with crushed-rock aggregate, 8: 17081 (R:GB)
Flammability
Incendiary effects on building and interior kindling fuels, 8: 18565 (R:US)

ATWS
ATWS: a reappraisal. Part 3. Frequency of anticipated transients, 8: 17929 (R:US)
Containment Buildings
Water entrainment in intercompartmental flow. Final report, 8: 17932 (R:US)
Cooling Towers
Study of a conceptual nuclear-energy center at Green River, Utah: potential alternative heat-rejection systems, 8: 17808 (R:US)
Decommissioning
Health physics and industrial hygiene aspects of decontamination as a precursor to decontamination, 8: 17919 (R:US)
Decontamination
Health physics and industrial hygiene aspects of decontamination as a precursor to decontamination, 8: 17919 (R:US)
Emergency Plans
Clarification of TMI action plan requirements. Requirements for emergency response capability, 8: 17863 (R:US)
Engineered Safety Systems
Severe Accident Risk Reduction Program, 8: 17962 (R:US)
Value-impact analysis of severe-accident prevention and mitigation systems, 8: 17961 (R:US)
Equipment Interfaces
Initial guidance on digraph-matrix analysis for systems interaction studies at selected LWR's, 8: 17953 (R:US)
Fuel Assemblies
Data base management project. Annual report, 29 September 1981-29 September 1982, 8: 17888 (R:US)
Parametric study of CHF data. Volume 2. A generalized subchannel CHF correlation for PWR and BWR fuel assemblies. Final report, 8: 17930 (R:US)
Fuel Cycle
Data base management project. Annual report, 29 September 1981-29 September 1982, 8: 17888 (R:US)
Loss of Coolant
Evaluation of RETRAN-02 capabilities for small-break LOCA analysis. Final report, 8: 17933 (R:US)

Modeling Aoki et al. experiments of condensation of flowing steam onto injected water via K-FIX, 8: 17955 (R:US)
Overview of DOE proposed loss-of-coolant accident (LOCA) rule-revision study, 8: 17921 (R:US)
Water entrainment in intercompartmental flow. Final report, 8: 17932 (R:US)
Off-Gas Systems
Value-impact analysis of severe-accident prevention and mitigation systems, 8: 17961 (R:US)
Power Generation
Nuclear-plant response to grid electrical disturbances. Final report, 8: 17936 (R:US)
Power Systems
Nuclear-plant response to grid electrical disturbances. Final report, 8: 17936 (R:US)
Pressure Vessels
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-dimensional and 3-dimensional crack models, 8: 17804 (R:US)
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8: 17796 (R:US)
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8: 17803 (R:US)
Study of a conceptual nuclear-energy center at Green River, Utah: site-specific transportation, 8: 17807 (R:US)
Primary Coolant Circuits
BWR cobalt-source identification. Final report, 8: 17795 (R:US)
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report, 8: 17799 (R:US)
Effects of residual stress on the UT detectability of surface cracks in feedwater nozzles. Final report, 8: 17798 (R:US)
Investigation of the conservatism associated with different combinations between primary and secondary piping responses, 8: 17806 (R:US)
Postaccident decontamination of reactor primary systems and test loops, 8: 17935 (R:US)
Twenty-six-inch pipe NDE instrument surveillance test, 8: 17801 (R:US)
Reactor Accidents
Parametric study of CHF data. Volume 2. A generalized subchannel CHF correlation for PWR and BWR fuel assemblies. Final report, 8: 17930 (R:US)
Postaccident decontamination of reactor primary systems and test loops, 8: 17935 (R:US)
Severe Accident Risk Reduction Program, 8: 17962 (R:US)
Value-impact analysis of severe-accident prevention and mitigation systems, 8: 17961 (R:US)
Reactor Instrumentation
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report, 8: 17799 (R:US)
Reactor Licensing
Overview of DOE proposed loss-of-coolant accident (LOCA) rule-revision study, 8: 17921 (R:US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), January 1-January 31, 1983, 8: 17862 (R:US)
Reactor Materials
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions, 8: 18262 (R:FI)
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8: 17796 (R:US)
General and localized corrosion of carbon and low-alloy steels in oxygenated high-temperature water. Final report, 8: 17800 (R:US)
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8: 17803 (R:US)
Twenty-six-inch pipe NDE instrument surveillance test, 8: 17801 (R:US)
Reactor Stability
Comparison of BWR-stability measurements with calculations using the code LAPUR-IV, 8: 17805 (R:US)
RHR Systems
Value-impact analysis of severe-accident prevention and mitigation systems, 8: 17961 (R:US)
Risk Assessment
Initial guidance on digraph-matrix analysis for systems interaction studies at selected LWR's, 8: 17953 (R:US)
Secondary Coolant Circuits
Investigation of the conservatism associated with different combinations between primary and secondary piping responses, 8: 17806 (R:US)
Steam Turbines
Full-scale turbine-missile-casing tests. Final report, 8: 17797 (R:US)
Thorium Cycle
Use of thorium as an alternative nuclear fuel, 8: 17887 (R:AU)
Waste Heat Utilization
Survey of potential process-heat and reject-heat utilization at a Green River nuclear-energy center, 8: 17809 (R:US)

Stability
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)
CALCIUM SULFIDES
Stability
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)
CALIBRATION STANDARDS
Quality Assurance
Quality assurance for environmental analytical chemistry: 1981, 8: 18317 (R:US)
CALIFORNIA
See also COSO HOT SPRINGS
Air Pollution
Geographical and temporal distribution of atmospheric mutagens in California. Final report 10 Dec 79-9 Mar 81, 8: 18979 (R:US)
Air Pollution Abatement
Implementing tradable emissions permits for sulfur oxides emissions in the south coast air basin. Volume II. main report, 8: 18709 (R:US)
Implementing tradable emissions permits for sulfur oxides emissions in the south coast air basin. Volume III: appendices, 8: 18710 (R:US)
Air Pollution Control
Controls for fine particle emissions from industrial sources in California. Final report, 8: 18671 (R:US)
Air Quality
Survey of acid precipitation in northern California. Final report, 8: 18609 (R:US)
Coal Industry
California coal transport, 8: 17189 (R:US)
Naval Petroleum Reserve
Possible effects of drilling operations in Section 6D, Naval Petroleum Reserve No. 2, Kern County, California on the endangered San Joaquin kit fox, blunt-nosed leopard lizard, and other sensitive species, 8: 17234 (R:US)
Pollution Sources
Source-receptor reconciliation of South Coast Air Basin particulate air quality data. Final report Jul 79-Jan 81, 8: 18672 (R:US)
Power Plants
Project status report No. 4, 8: 18113 (R:US)
Radiation Monitoring
Community Radiation Monitoring Program annual report, January 1, 1981-November 30, 1982, 8: 18695 (R:US)
Severance Tax
California oil severance tax: who gains. who pays, 8: 17229 (B:US)
Effects of a severance tax on oil produced in California, 8: 17230 (B:US)
CALIFORNIUM 252
Nuclear Reaction Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Spontaneous Fission
Data estimated from the prompt neutron spectra of ^{235}U, ^{236}U, ^{239}Pu, ^{252}Cf fission, 8: 19188 (RA:SU:In Russian)
NIa crystal efficiency of 7.5x7.5cm to neutrons of ^{252}Cf, 8: 19192 (R:FR:In French)
CALORIMETERS
Performance Testing
Biological and clinical dosimetry. Progress report, October 1, 1981-August 31, 1982, 8: 19243 (R:US)
CALVERT CLIFFS-1 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Calver Cliffs case study. Technical report 1 Oct 78-4 Jan 82, 8: 17873 (R:US)
CALVERT CLIFFS-2 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Calver Cliffs case study. Technical report 1 Oct 78-4 Jan 82, 8: 17873 (R:US)
CAMAC SYSTEM
Computer Application to Measurement And Control.
Analog-to-Digital Converters
BADC: semi-autonomous controller for data acquisition, the brilliant ADC (Engineering Materials), 8: 18554 (E:US)

Charged-Particle Transport
Anomalies in the thickness dependence of the energy loss of helium and nitrogen ions in very thin carbon foils, 8: 19219 (RA:US)
Effective charge of energetic ions in metals, 8: 19223 (RA:US)
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)
Energy loss of heavy ions as a function of target thickness: Ne → C, 8: 19220 (RA:US)
Chemical Analysis
Techniques for the measurement of aerosol carbon content. Final report Jun 78-Mar 81, 8: 18669 (R:US)
Gamma Spectroscopy
Techniques for the measurement of aerosol carbon content. Final report Jun 78-Mar 81, 8: 18669 (R:US)
Ion Collisions
Calculation of the equilibrium mean charge of helium ions, 8: 19055 (RA:US)
Charge state distribution of light ions at glancing collision with solid surface, 8: 19057 (RA:US)
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)
Medium dependence of charge state fractions of MeV He beam, 8: 19056 (RA:US)
Oxidation
A review of photo-oxidation for the determination of total organic carbon in water. Technical report, 8: 18760 (R:US)
Pion Plus Reactions
Proton emission in the pion-nucleus interactions which reduce to production of $\pi^+\pi^-$ system, 8: 19088 (R:SU:In Russian)
Sinks
Tropical organic soils ecosystems in relation to regional water resources in southeast Asia, 8: 18791 (R:US)

CARBON 11
Labelled Compounds
Cyclotron production of molecules labelled with short-lived radioisotopes β^+ emitters (^{15}O, ^{13}N, ^{11}C) and their clinical uses, 8: 18377 (R:FR:In French)

CARBON 12 REACTIONS
Charge-Exchange Reactions
Charge-exchange products of BEVALAC projectiles, 8: 19143 (R:US)
Elastic Scattering
Elastic and inelastic scattering of heavy ions at intermediate energies, 8: 19152 (R:FR)
Inelastic Scattering
Elastic and inelastic scattering of heavy ions at intermediate energies, 8: 19152 (R:FR)
Momentum Transfer
Charge-exchange products of BEVALAC projectiles, 8: 19143 (R:US)
Particle Production
Light particle production in ^{12}C induced reactions at Cern SC Energies, 8: 19174 (R:SE)
Quasi-Fission
Mechanisms of alpha emitter production in ^{12}C induced reactions at 1 GeV, 8: 19176 (R:FR)

CARBON 12 TARGET
Carbon 12 Reactions
Elastic and inelastic scattering of heavy ions at intermediate energies, 8: 19152 (R:FR)
Electron Reactions
Parity-violating weak neutral current effects in elastic e-^{12}C scattering. Progress report, March 1, 1982-December 31, 1982, 8: 19118 (R:US)
Neutron Reactions
Invariant form of generating matrix elements of the problem of resonating group method examplified by the system ^{12}C + n, 8: 19153 (R:UA:In Russian)
Oxygen 16 Reactions
Fusion measurements in light- and medium-mass heavy-ion reactions. Progress report, June 1, 1982-May 31, 1983, 8: 19147 (R:US)
Silicon 28 Reactions
Angular correlations of α-particles from decay of ^{40}Ca following fusion of ^{28}Si + ^{12}C, 8: 19145 (R:FR)

CARBON 14
Environmental Exposure Pathway
Radiation protection of workers and the general population, specifically in regard to nuclear installations, 8: 18729 (BA:XE)

CARBON 14 COMPOUNDS
Chemical Reactions
The reaction of carbon-14-labeled reagents with coal, 8: 17099 (BA:US)
Renal Clearance
Dosimetry of internal emitters, 8: 18933 (BA:XE)
Retention
Dosimetry of internal emitters, 8: 18933 (BA:XE)

CARBON COMPOUNDS
Chemical Analysis
Techniques for the measurement of aerosol carbon content. Final report Jun 78-Mar 81, 8: 18669 (R:US)

CARBON DIOXIDE
Biological Effects
Tolerance and adaptation to acute and chronic hypercapnia in man, 8: 18961 (RA:US)
Corrosive Effects
High-temperature corrosion of iron in sulfur-containing atmospheres (CO_2-10% SO_2 at 871°C), 8: 18260 (R:US)
Energy Policy
Institute for Energy Analysis research report 1982, 8: 18805 (R:US)
Environmental Effects
Geochemical and geophysical models of the fossil-fuel CO_2 climate problem. Annual progress report, September 1981-October 1982, 8: 17121 (R:US)
Monitoring
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)
Sinks
Recent changes in the global carbon balance of tropical organic soils, 8: 18712 (R:US)
Solubility
Solubilities of small molecules in liquid krypton, 8: 18338 (J:US)
Thermal Conductivity
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)

Thermal Diffusion
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)

CARBON DIOXIDE LASERS
Design
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh, 8: 18426 (R:GB)
Performance
Submillimeter laser and Fabry-Perot spectroscopy using metallic mesh, 8: 18426 (R:GB)
Q-Switching
High repetition rate Q-switched CO_2 laser, 8: 18425 (R:AU)
Tuning
Grating tuned unstable resonator laser cavity (Patent), 8: 18442 (P:US)

CARBON IONS
Spectral Shift
Plasma shifts of CVI Lyman lines to shorter wavelengths. Annual report, November 4, 1981-September 30, 1982, 8: 19285 (R:US)
Stopping Power
Stopping power of Ni, Ag, Au and Pb for $\sim$ 7 MeV/n α-particles and carbon ions (Z_1^3 proportional deviation from the Bethe formula), 8: 19212 (RA:US)

CARBON MONOXIDE
Adsorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Heterogeneous catalysis on the molecular scale, 8: 18340 (J:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)
Air Pollution
Investigation of gasoline engine warm-up emissions. Final report, 8: 18237 (R:US)
Air Pollution Control
Control techniques for carbon monoxide emissions from stationary sources, 8: 18668 (R:US)
Effect of low cost repairs on I/M failed vehicles, 8: 18239 (R:US)
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Computer Codes
Calculation of the uptake of CO into the human blood, 8: 18973 (R:DE:In German)
Desorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Heterogeneous catalysis on the molecular scale, 8: 18340 (J:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)
Flammability
Flammability of mixed gases. Investigations report (Hydrogen-methane-carbon monoxide-air), 8: 17495 (R:US)
Indoor Air Pollution
Indoor air pollution: an emerging health problem, 8: 18959 (R:US)
Mathematical Models
Calculating future carbon monoxide emissions and concentrations from urban traffic data, 8: 18622 (R:US)
Methanation
Evaluation of coal conversion catalysts. Annual report, 8: 17060 (R:US)
Monitoring
A study to evaluate carbon monoxide and hydrogen sulfide continuous emission monitors at an oil refinery. Final report, 8: 18613 (R:US)
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)
Maps depicting nonattainment areas pursuant to Section 107 of the Clean Air Act - 1982, 8: 18618 (R:US)
National air pollutant emission estimates, 1970-1978. Final report, 8: 18623 (R:US)
Quality Assurance in Support of Energy Related Monitoring Activities: annual report No. 3, 8: 18636 (R:US)
Physical Properties
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Removal
Ferrite catalyst (Japanese patent), 8: 17118 (TG:US)
Uptake
Calculation of the uptake of CO into the human blood, 8: 18973 (R:DE:In German)

CARBON TETRACHLORIDE
Solubility
Solubilities of small molecules in liquid krypton, 8: 18338 (J:US)

CARCINOGENESIS
See also LEUKEMOGENESIS
Age Dependence
Influence of ageing alterations on tumor development after beta-irradiation, 8: 18944 (BA:XE)
Biological Models
Studies in a rat lung tumor model: cellular biochemistry and cytogenetics. Annual report no. 2, 1 Jul 81-30 Jun 82, 8: 18958 (R:US)

CARCINOGENS
See also PHORBOL ESTERS
Biological characteristics of pulp mill effluents. Part 1. Progress report to March 31, 1978, 8: 18972 (R:CA)
Genetic Effects
Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells, 8: 18902 (BA:XE)

CARDIOVASCULAR DISEASES
Pathology
Myocardial metabolism, perfusion, wall motion and electrical activity in Duchenne muscular dystrophy, 8: 18827 (R:US)

CARDIOVASCULAR SYSTEM
See also BLOOD VESSELS
Delayed Radiation Effects
Late somatic effects of ionizing radiation i the mammalian organism, 8: 18927 (BA:XE)
Radioisotope Scanning
The implications of cost-effectiveness analysis of medical technology. Background paper number 2: case studies of medical technologies. Case study number 13: cardiac radionuclide imaging and cost effectiveness, 8: 18838 (R:US)

CARNALLITE
Thermal Conductivity
Impurities in rock-salt: consequences for the temperature increases at the disposal of high-level nuclear waste, 8: 17399 (R:US)

CARNOT CYCLE
Fourier Heat Equation
Maximum mechanical work from the steady energy circulation on a finite body, 8: 18459 (J:IT)

Mechanical Efficiency
Maximum mechanical work from the steady energy circulation on a finite body, 8: 18459 (J:IT)
CASIMIR OPERATORS
Eigenfunctions
Complete sets of functions on one-void hyperboloid, 8: 19264 (RA:SU:In Russian)
Hypergeometric Functions
Complete sets of functions on one-void hyperboloid, 8: 19264 (RA:SU:In Russian)
CASINGS
See COVERINGS
CASTLE PROJECT
Military Personnel
Castle series, 1954. Technical report, 8: 18573 (R:US)
CATALYSIS
Research Programs
Applications of functionalized polymers in catalysis. Final report, September 1, 1977-November 30, 1981, 8: 18349 (R:US)
CATALYSTS
Chemical Preparation
Applications of functionalized polymers in catalysis. Final report, September 1, 1977-November 30, 1981, 8: 18349 (R:US)
Development of catalysts for coal conversion. Annual report Jan-Dec 80, 8: 17058 (R:US)
Ferrite catalyst (Japanese patent), 8: 17118 (TG:US)
Process for treatment of waste gas containing nitrogen oxides (Japanese patent), 8: 17119 (TG:US)
Deactivation
Catalytic hydrogenation of SRC-I product at Wilsonville Pilot Plant, 8: 17042 (RA:US)
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)
Evaluation
Evaluation of coal conversion catalysts. Annual report, 8: 17060 (R:US)
Performance Testing
Slurry Fischer-Tropsch/Mobil two-stage process of converting syngas to high-octane gasoline. Quarterly report, 1 April-30 June 1982 (Synthesis gas to high octane gasoline in two stages with different catalysts), 8: 17490 (R:US)
Regeneration
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)
Temperature Effects
Basic studies of new coal conversion catalysts. Annual report, 8: 17059 (R:US)
CATAWBA-1 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Catawba Nuclear Station, Units 1 and 2. Docket Nos. 50-413 and 50-414, Duke Power Company, et al., 8: 17869 (R:US)
Reactor Safety
Safety evaluation report related to the operation of Catawba Nuclear Station, Units 1 and 2. Docket Nos. 50-413 and 50-414, Duke Power Company, et al., 8: 17869 (R:US)
CATAWBA-2 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Catawba Nuclear Station, Units 1 and 2. Docket Nos. 50-413 and 50-414, Duke Power Company, et al., 8: 17869 (R:US)
Reactor Safety
Safety evaluation report related to the operation of Catawba Nuclear Station, Units 1 and 2. Docket Nos. 50-413 and 50-414, Duke Power Company, et al., 8: 17869 (R:US)
CATECHOL
See PYROCATECHOL
CAVITIES
Configuration
Finite-element modeling of thermo-mechanical responses associated with underground coal conversion, 8: 17024 (R:US)
CAVITY RECEIVERS
Design
Improved power efficiency for very-high-temperature solar-thermal-cavity receivers (Patent), 8: 17686 (P:US)
CCD
See CHARGE-COUPLED DEVICES
CEA SACLAY
Nuclear Physics
Progress report of the Nuclear Physics Department (1.10.1980-30.9.1981), 8: 19132 (R:FR:In French)
Research Programs
DPhPE 1980-1981, 8: 19076 (R:FR:In French)
CELL CULTURES
Mutagenesis
Fluorometric method of quantitative cell mutagenesis (Patent), 8: 18820 (P:US)
Quantitative Chemical Analysis
Fluorometric method of quantitative cell mutagenesis (Patent), 8: 18820 (P:US)
CELL GROWTH (ANIMAL)

CELLS (PLANT)
See PLANT CELLS
CELLS (REACTOR)
See REACTOR CELLS
CELLULASE
Code number 3.2.1.4.
Biosynthesis
Biosynthesis of the enzymes of the cellulase system by T. reesei QM 9414 in the presence of sophorose, 8: 17510 (RA:US)
Enzyme Activity
Biosynthesis of the enzymes of the cellulase system by T. reesei QM 9414 in the presence of sophorose, 8: 17510 (RA:US)
Productivity
Advisory Committee on Military Personnel Supplies periodic report: Committee on Environmental Sciences and Resources. Final report, 8: 18815 (R:US)
CELLULASES
See CELLULASE
CELLULOSE
Acid Hydrolysis
Use of anhydrous HF solvolysis in conversion of biomass to glucose, 8: 17507 (RA:US)
Biodegradation
Control of development and secondary metabolite production in streptomycetes and its possible importance in lignocellulose utilization, 8: 17582 (RA:US)
Enzymatic Hydrolysis
Biosynthesis of the enzymes of the cellulase system by T. reesei QM 9414 in the presence of sophorose, 8: 17510 (RA:US)
Fermentation
Clostridium thermocellum as an ethanol producer: its characteristics and current and future research (MIT Process), 8: 17508 (RA:US)
Reconstitution of mesophilic microbial associations which ferment cellulose to various products, 8: 17499 (BA:FR)

Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)
Liquefaction
Formation of aromatic and possible oligomeric materials from cellulose liquefaction, 8: 17580 (R:US)
Solvolysis
Use of anhydrous HF solvolysis in conversion of biomass to glucose, 8: 17507 (RA:US)
CELTIC SEA
See IRISH SEA
CEMENTS
Comparative Evaluations
Comparison of the leachability of three TRU cement waste forms, 8: 17403 (R:US)
Fabrication
Comparison of the leachability of three TRU cement waste forms, 8: 17403 (R:US)
Leaching
Comparison of the leachability of three TRU cement waste forms, 8: 17403 (R:US)
CENTRAL AMERICA

Regional Analysis
Energy and development in Central America. Volume I: regional assessment, 8: 17991 (R:US)
CENTRAL RECEIVERS
Computer Codes
DRAC: a user-friendly computer code for modeling transient thermohydraulic phenomena in solar-receiver tubing, 8: 17643 (R:US)
Fluid Flow
DRAC: a user-friendly computer code for modeling transient thermohydraulic phenomena in solar-receiver tubing, 8: 17643 (R:US)
Heat Transfer
DRAC: a user-friendly computer code for modeling transient thermohydraulic phenomena in solar-receiver tubing, 8: 17643 (R:US)
CENTRAL REGION
See FEDERAL REGION III
CERAMICS
Materials Testing
Scanning ultrasonic probe (Patent), 8: 18284 (P:US)
CERIUM
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
CERIUM 141
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
CERIUM 144
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
CERIUM ALLOYS
Dehydridation
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)
Hydridation
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)
Sorptive Properties
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)
CERIUM SELENIDES
Chemical Preparation
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Chemical Reactions
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Electric Conductivity
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Seebeck Effect
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
CERN II SYNCHROTRON
See CERN SPS SYNCHROTRON
CERN SPS SYNCHROTRON
Radiation Detectors
Electron/hadron discrimination in the hyperon semi-leptonic decay experiments performed at the CERN SPS, 8: 18540 (R:US)
CERRO PRIETO GEOTHERMAL FIELD
Gravity Surveys
Correlation between precision gravity and subsidence measurements at Cerro Prieto, 8: 17710 (R:US)
Ground Subsidence
Correlation between precision gravity and subsidence measurements at Cerro Prieto, 8: 17710 (R:US)
Resistivity Surveys
Interpretation of dipole-dipole resistivity monitoring data at Cerro Prieto, 8: 17704 (R:US)
CESIUM
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
Distribution Functions
Studies of cesium and strontium migration in unconsolidated Canadian geological materials, 8: 18721 (R:CA)
Neutron Reactions
Parameters of iodine and cesium neutron resonances in 20-250 eV range, 8: 19173 (R:XJ:In Russian)
Sorption
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
CESIUM 134
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
Radionuclide Migration
Marine distribution and behaviour of transuranic and fission product radionuclides, 8: 18778 (BA:XE)
Uptake
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
CESIUM 137
Radioecological Concentration
Evaluation of the Steel Creek ecosystem in relation to the proposed restart of the L-reactor, 8: 18743 (R:US)
Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed, 8: 19023 (J:GB)
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
Radionuclide Migration
Marine distribution and behaviour of transuranic and fission product radionuclides, 8: 18778 (BA:XE)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)

Removal
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Uptake
Bibliographical review of radioactive cesium uptake capacity and processes in aquatic plants, 8: 18772 (R:FR:In French)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)

CESIUM ISOTOPES

TRIBALOY 700
TRIBALOY 800

Aging
Aging response of a welded iron-based superalloy (JBK-75 (Fe-28 Ni-15 Cr-2 Ti-1 Mo)), 8: 18258 (R:US)
Creep
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)
Heat Treatments
Method for heat treating iron-nickel-chromium alloy, 8: 18270 (P:US)
Microstructure
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)
Swelling
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)

CHROMIUM OXIDES
Work Functions
Thermionic-emission microscopy of polycrystalline molybdenum and Mo-$LaCrO_3$ (Mo-$LaCrO_3$), 8: 18130 (R:US)

CHROMIUM-MOLYBDENUM STEELS
See also ALLOY-HT-9
Hydrogen Embrittlement
Hydrogen attack of pressure-vessel steels. Annual report, June 1, 1982-May 31, 1983, 8: 18249 (R:US)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHROMOSOMAL ABERRATIONS
Radioinduction
Radiation-induced chromosome aberrations, 8: 18897 (BA:XE)
Repair and induction of chromosome aberrations and point mutations in mammalian somatic cells: a summary and perspective, 8: 18953 (BA:US)
Studies on induced chromosome aberrations and chromosome structure, 8: 18904 (BA:XE)

CHROMOSOME ABERRATIONS
See CHROMOSOMAL ABERRATIONS

CHROMOSOME EXCHANGES
See CHROMOSOMAL ABERRATIONS

CHROMOSOME FRAGMENTS
See CHROMOSOMAL ABERRATIONS

CHROMOSOMES
Non-Disjunction
Studies on the effects of radiation on satellite associations of human chromosomes, 8: 18889 (BA:XE)

CINNAMIC ACID
Chemical Reactions
Pulse radiolytic and product analysis studies of the reaction of hydroxyl radicals with cinnamic acid. The relative extent of addition to the ring and side chain, 8: 18370 (J:US)
Radiolysis
Pulse radiolytic and product analysis studies of the reaction of hydroxyl radicals with cinnamic acid. The relative extent of addition to the ring and side chain, 8: 18370 (J:US)

CIRCULAR POINT COLLECTORS
See PARABOLIC DISH COLLECTORS

CIRCULATING SYSTEMS
Dryout
Thermo- and fluiddynamical behaviour of loop systems under pressure relief, 8: 17760 (R:DE:In German)
Pressure Release
Thermo- and fluiddynamical behaviour of loop systems under pressure relief, 8: 17760 (R:DE:In German)

CITIES
See URBAN AREAS

CITRUS
Food Processing
Case histories of recently implemented technologies for citrus-processing energy-efficiency improvement. Volume II. Final report, 8: 18189 (R:US)

CLASSIFIED INFORMATION
Information Dissemination
Procedures for checking the proper classification of reports declassified during the comprehensive review, 8: 18039 (R:US)
Security
Procedures for checking the proper classification of reports declassified during the comprehensive review, 8: 18039 (R:US)

CLEAN AIR ACT
Implementation
Legal issues related to creation, banking and use of emission reduction credits (ERCS). Part I: the 'taking' issue - is compensation required if a state or local government confiscates or reduces the quantity of banked ERCS? Final report, 8: 18018 (R:US)
Preliminary identification of areas subject to construction bans under the Clean Air Act and analysis of related issues. Final report, 8: 18063 (R:US)

CLIMATES
Global Aspects
Global temperature patterns 6000 years ago. Progress report, 8: 19020 (R:US)
Greenhouse Effect
Life on a warmer earth: possible climatic consequences of man made global warming, 8: 18702 (R:AT)
Mathematical Models
Addendum to user's guide for climatological dispersion model. Final report, 8: 18593 (R:US)
Geochemical and geophysical models of the fossil-fuel CO_2 climate problem. Annual progress report, September 1981-October 1982, 8: 17121 (R:US)
Statistics
A climatological study of the AFGL mesonetwork. volume ii. Final scientific report, 8: 17730 (R:US)

CLOSTRIDIUM
See also CLOSTRIDIUM THERMOCELLUM
CLOSTRIDIUM THERMOSACCHAROLYTICUM
Growth
Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)
Metabolism
Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)

CLOSTRIDIUM THERMOCELLUM
Genetic Engineering
Clostridium thermocellum as an ethanol producer: its characteristics and current and future research (MIT Process), 8: 17508 (RA:US)
Growth
Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)
Metabolism
Clostridium thermocellum as an ethanol producer: its characteristics and current and future research (MIT Process), 8: 17508 (RA:US)
Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)

CLOSTRIDIUM THERMOSACCHAROLYTICUM
Genetic Engineering
Clostridium thermocellum as an ethanol producer: its characteristics and current and future research (MIT Process), 8: 17508 (RA:US)
Growth
Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)
Metabolism
Clostridium thermocellum as an ethanol producer: its characteristics and current and future research (MIT Process), 8: 17508 (RA:US)
Thermophilic degradation of cellulosic biomass, 8: 17509 (RA:US)

CLOUDS
Limited to clouds in the earth atmosphere; for interstellar clouds see COSMIC DUST or COSMIC GASES.
Chemical Composition
Cloudwater acidity measurements and formation mechanisms: experimental design, 8: 18588 (R:US)
Studies of the gas- and aqueous-phase composition of stratiform clouds, 8: 18599 (R:US)

Chemical Reaction Kinetics
Cloudwater acidity measurements and formation mechanisms: experimental design, 8: 18588 (R:US)
PH Value
Cloudwater acidity measurements and formation mechanisms: experimental design, 8: 18588 (R:US)
Studies of the gas- and aqueous-phase composition of stratiform clouds, 8: 18599 (R:US)

COAL
See also BLACK COAL
BROWN COAL
SUBBITUMINOUS COAL
Activation Analysis
An automated multidetector system for instrumental neutron activation analysis of geological and environmental materials, 8: 17097 (BA:US)
Briquetting
Canadian R and D studies of partially briquetted coke oven charges - addition of non-coking coal and additives, 8: 17074 (B:CA)
Carbonization
Possibilities of utilizing Indonesian coal by carbonisation and gasification, 8: 17015 (RA:DE)
Chemical Analysis
Colorado coal analyses, 1976-1979. Information series 10, 8: 17088 (R:US)
Chemical Composition
Colorado coal analyses, 1976-1979. Information series 10, 8: 17088 (R:US)
The phosphorus content of coal and coke, 8: 17090 (R:US)
Chemical Reactions
The reaction of carbon-14-labeled reagents with coal, 8: 17099 (BA:US)
Cleaning
Compilation of air pollutant emission factors, third edition (including supplements 1-7) supplement 10, 8: 18619 (R:US)
Coking
Canadian R and D studies of partially briquetted coke oven charges - addition of non-coking coal and additives, 8: 17074 (B:CA)
Further considerations of the plastic layer thickness developed within a coke-oven charge. Carbonization research report, 8: 17055 (R:US)
Combustion
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)
Regeneratively cooled coal combustor/gasifier with integral dry ash removal, 8: 18480 (P:US)
Combustion Products
Chemical effect of entrained particles in coal conversion streams. Third quarterly technical progress, February 1, 1981-April 30, 1982, 8: 17183 (R:US)
NO/sub x/ emissions from pulverized-coal arch-fired boilers. Final report, 8: 17106 (R:US)
Combustion Properties
Chemical effect of entrained particles in coal conversion streams. Third quarterly technical progress, February 1, 1981-April 30, 1982, 8: 17183 (R:US)
Comparative Evaluations
Effect of Wyoming coal properties on direct liquefaction reactivity (Correlations with coal properties and distillate yields), 8: 17036 (RA:US)
Demand
World coal prospects to 2000, 8: 17138 (BA:US)
Desulfurization
Desulfurization of carbonaceous materials, 8: 17071 (P:US)
Some considerations of the desulphurization of coal for cokemaking, 8: 17054 (R:US)
Electron Microprobe Analysis
Application of PIXE, RBS and high energy proton microbeams to the elemental analysis of coal and coal waste, 8: 17098 (BA:US)
Energy Policy
Overview of the energy research and development program of the Federal Republic of Germany with special attention to coal utilization technology, 8: 18071 (RA:DE)
Energy Source Development
Overview of the energy research and development program of the Federal Republic of Germany with special attention to coal utilization technology, 8: 18071 (RA:DE)
World coal prospects to 2000, 8: 17138 (BA:US)
Exports
California coal transport, 8: 17189 (R:US)
Fluidized-Bed Combustion
Modern coal combustion and boiler technology, 8: 17748 (RA:DE)
Test and evaluation of hot-gas cleanup devices, Phase I and II (Task 1). Technical progress report, March 1-May 31, 1982, 8: 17102 (R:US)
Trace and minor element reactions in fluidized-bed combustion processes. Final report Aug 79-Aug 81, 8: 17188 (R:US)
Fuel Substitution
Construction and operation of a prototype of a central-heating plant fired by coal dust corresponding to the system Schoppe, 8: 17182 (R:DE:In German)
Hydraulic Transport
California coal transport, 8: 17189 (R:US)
Characterization, renovation, and utilization of water from slurry transport systems. Completion report 1 Oct 79-30 Sep 81, 8: 17108 (R:US)
Coal-slurry pipelines in Virginia: a preliminary feasibility study. Final report, 8: 17179 (R:US)
Hydrogenation
Kinetics and mechanisms of catalytic hydroliquefaction and hydrogasification of lignite. Final technical report, 8: 17030 (R:US)
Maritime Transport
Coal traffic analysis to accompany Great Lakes harbors study, 8: 17169 (R:US)
Coastal energy transportation study, phase ii, volume 1: a study of OCS onshore support bases and coal export terminals, 8: 17176 (R:US)
Marketing
Coal transportation efficiency program: small mine operations. Final report, 8: 17191 (R:US)
Materials Handling
Coal storage hopper with vibrating-screen agitator (Patent), 8: 17180 (P:US)
Pneumatic dense-phase shipboard coal and ash conveying storage and bunkering systems for coal-fired ships (technical application manual). Final report Mar 81-May 82, 8: 17177 (R:US)
Technology of coal handling and conveying represented by actual examples, 8: 17172 (RA:DE)
Meetings
Indonesian-German seminar on coal technology, 8: 17007 (R:DE)
Pneumatic Transport
Pneumatic dense-phase shipboard coal and ash conveying storage and bunkering systems for coal-fired ships (technical application manual). Final report Mar 81-May 82, 8: 17177 (R:US)
Prices
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
State energy price system. Volume I. Overview and technical documentation, 8: 17221 (R:US)
State energy price system. Volume II. Data base development, 8: 17222 (R:US)
Production
Illinois energy production statistical report 1960-1979, 8: 18074 (R:US)
Proton Microprobe Analysis
Application of PIXE, RBS and high energy proton microbeams to the elemental analysis of coal and coal waste, 8: 17098 (BA:US)
Pyrolysis
Forms and volatilities of trace and minor elements in coal. I. A comparison of three pyrolysis units. II. Feasibility of a

graphite trapping system. Environmental geology notes, 8: 17061 (R:US)
Rail Transport
California coal transport, 8: 17189 (R:US)
Storage
Pneumatic dense-phase shipboard coal and ash conveying storage and bunkering systems for coal-fired ships (technical application manual). Final report Mar 81-May 82, 8: 17177 (R:US)
Structural Chemical Analysis
The reaction of carbon-14-labeled reagents with coal, 8: 17099 (BA:US)
Supercritical Gas Extraction
Extraction of coal with solvents in liquid and supercritical state under non-hydrogenating and hydrogenating conditions, 8: 17008 (R:DE:In German)
Supply and Demand
California coal transport, 8: 17189 (R:US)
The supply of Australian coal. Occasional paper series, 8: 17190 (R:US)
Transport
Coal slurry pipeline transport, 8: 17173 (RA:DE)
Technology of coal handling and conveying represented by actual examples, 8: 17172 (RA:DE)
Transportation Systems
Background report on coal transportation in western Canada, 8: 17181 (B:CA)
X-Ray Fluorescence Analysis
Application of PIXE, RBS and high energy proton microbeams to the elemental analysis of coal and coal waste, 8: 17098 (BA:US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS

Feasibility Studies
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
Proceedings of the seventh annual EPRI contractors' conference on coal liquefaction, 8: 17033 (R:US)
Industrial Plants
Pre-feasibility study for construction of a commercial coal hydrogenation plant (Federal Republic of Germany), 8: 17009 (R:DE:In German)
Investment
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
Noise
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
Pilot Plants
Production of liquid hydrocarbons by coal hydrogenation (Federal Republic of Germany), 8: 17014 (RA:DE)
Residues
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
Type III extended pilot-plant evaluation of molten H-Coal liquefaction residue. Gasification of residual-materials from coal liquefaction, 8: 17021 (R:US)
Risk Assessment
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
Waste Water
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)

COAL LIQUIDS
Agglomeration of SRC residues, 8: 17045 (RA:US)
Chemical Analysis
Characterization of coal-liquefaction fractions. Final report, 8: 17022 (R:US)
Trace metal speciation in coal-derived products prepared with a novel process solvent (Seven samples), 8: 17087 (RA:US)
Chemical Composition
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8: 17213 (R:US)
Chemical Reaction Yield
Optimization chemistry and product analysis of supercritical gas extraction for the liquefaction of Canadian coals, 8: 17076 (B:CA)
Coking
Status of the EDS project and learning from large pilot plant operations, 8: 17034 (RA:US)
Combustion Products
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Combustion Properties
Combustion evaluation of residual fuel oil from two-stage liquefaction. Final report (Residual fuel oil similar to No. 6 fuel oil from petroleum), 8: 17187 (R:US)
Desulfurization
Catalytic hydrogenation of SRC-I product at Wilsonville Pilot Plant, 8: 17042 (RA:US)
Integrated bench-scale studies: process variations in two-stage coal liquefaction, 8: 17041 (RA:US)
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)
Distillation
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Performance of coal liquefaction solvents in selective recycle operation, 8: 17038 (RA:US)
Fractionation
Characterization of coal-liquefaction fractions. Final report, 8: 17022 (R:US)
Solvent quality effects in the Exxon donor solvent coal liquefaction process, 8: 17044 (RA:US)
Hydrogenation
Catalytic hydrogenation of SRC-I product at Wilsonville Pilot Plant, 8: 17042 (RA:US)
Integrated bench-scale studies: process variations in two-stage coal liquefaction, 8: 17041 (RA:US)
Proceedings of the seventh annual EPRI contractors' conference on coal liquefaction, 8: 17033 (R:US)

Solvent quality effects in the Exxon donor solvent coal liquefaction process, 8: 17044 (RA:US)
Meetings
Upgrading of synthetic crudes. Chemistry of oxygenates in fuels. General papers: poster session. Surface science of catalysis: physical and catalytic properties of supported chromium. Surface science of catalysis: temperature-programmed studies of porous catalysts. Feeds, fuels and chemicals from wood and agricultural residues. Lignocellulose-derived chemicals for enhanced oil recovery, 8: 17072 (B:US)
Oil Yields
Characterization of coal-liquefaction fractions. Final report, 8: 17022 (R:US)
Physical Properties
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Recycling
Solvent quality effects in the Exxon donor solvent coal liquefaction process, 8: 17044 (RA:US)
Thermodynamic Properties
Development of a reference data system for the liquefaction technology data base. Technical progress report, 22 September 1982-31 December 1982, 8: 17086 (R:US)
COAL MINERS
Medical Examinations
Follow up survey of coal miners. Final report, 8: 17194 (R:US)
Respiratory System Diseases
Follow up survey of coal miners. Final report, 8: 17194 (R:US)
COAL MINES
Accidents
Analysis of coal mine electrical accidents. Open file report 25 Jun 80-27 Aug 81, 8: 17195 (R:US)
Air Pollution Control
Development of a continuous methane monitor. Open file report Jun 77-Mar 80, 8: 18662 (R:US)
Building Materials
Wood products use in coal mining. Open file report 21 Apr 80-1 Apr 82, 8: 17159 (R:US)
Communications
A communication and monitoring system for an underground coal mine, iron ore mine, and deep underground silver mine. Open file report Jun 73-Mar 78, 8: 17157 (R:US)
Control Systems
A communication and monitoring system for an underground coal mine, iron ore mine, and deep underground silver mine. Open file report Jun 73-Mar 78, 8: 17157 (R:US)
Degassing
Degasification of the Mary Lee Coalbed, Brookwood, Alabama. Report of investigations/1982, 8: 17150 (R:US)
Dusts
A study of the day-to-day variation in the composition of dust samples and of the measurement procedures required to establish the composition of the dust with requisite accuracy. Final report, 8: 17133 (R:GB)
Feasibility study of coal dust measurement by light reflectance photometry. Open file report 20 Aug 79-20 May 81, 8: 17089 (R:US)
Electrical Equipment
Analysis of coal mine electrical accidents. Open file report 25 Jun 80-27 Aug 81, 8: 17195 (R:US)
Fire Prevention
Development of ambient cure polyimide foam. Open file report (final) Jan 77-May 78, 8: 17156 (R:US)
Improved fire protection system for underground fueling areas. Volume II. Final report Sep 77-Oct 81, 8: 17196 (R:US)
Health Hazards
Third annual report of health activities under the Federal Mine Safety and Health Act of 1977, 8: 18983 (R:US)
Land Reclamation
Changes in sodium adsorption ratios following revegetation of coal mine spoils in southeastern Montana. Forest service research paper, 8: 17124 (R:US)
Models to estimate revegetation potentials of land surface mined for coal in the west. General technical report, 8: 17135 (R:US)
Organic and inorganic amendments affect vegetation growth on an acidic minesoil. Forest Service research paper (final), 8: 18736 (R:US)
Reclamation of pyritic waste, 8: 17129 (R:US)
Ownership
Changing ownership within the US minerals industry: possible causes and steps needed to determine the effects, 8: 18072 (R:US)
Power Systems
Mine power systems. Volume I. Contract research report 1 Oct 74-31 May 81, 8: 17162 (R:US)
Mine power systems. Volume II. Contract research report 1 Oct 74-31 May 81, 8: 17163 (R:US)
Regulations
Small surface coal mine operators handbook. Final report, 8: 17200 (R:US)
Revegetation
Models to estimate revegetation potentials of land surface mined for coal in the west. General technical report, 8: 17135 (R:US)
Spray Coating
Development of ambient cure polyimide foam. Open file report (final) Jan 77-May 78, 8: 17156 (R:US)
Supports
Wood products use in coal mining. Open file report 21 Apr 80-1 Apr 82, 8: 17159 (R:US)
Ventilation Systems
Sprayfan system - installation and operation manual - Volume II. Open file report Jul 77-Oct 81, 8: 17160 (R:US)
Sprayfan system - results of mine testing - Volume III Open file report Jul 77-Oct 81, 8: 17161 (R:US)
Waste Disposal
Partial listing of coal waste embankments, surface and underground openings. Open file report (final) Mar 80-Aug 81, 8: 17112 (R:US)
Partial listing of coal waste embankments, surface and underground openings: appendix, volume I. Open file report (final) Mar 80-Aug 81, 8: 17113 (R:US)
Partial listing of coal waste embankments, surface and underground openings: appendix, volume II. Open file report (final) Mar 80-Aug 81, 8: 17114 (R:US)
COAL MINING
Probability of encountering coalbed discontinuities during vertical and horizontal borehole drilling. Report of investigations/1982, 8: 17149 (R:US)
Dusts
Coal mine dust control: cost versus effectiveness - field sampling manual volume II. Open file report Sep 79-Oct 81, 8: 17154 (R:US)
Generation and control of mine airborne dust, 8: 17168 (BA:CA)
Environmental Effects
Classification and management of wetlands in the Western Kentucky coal field. Research report, 8: 17126 (R:US)
Environmental Impacts
Stream water quality in the coal region of eastern Kentucky. General technical report (final), 8: 17128 (R:US)
Management
Aspects of planning, organization and management of coal mining operations, 8: 17141 (RA:DE)
Occupational Diseases
Autopsy studies of coalminers' lungs. Final report, 8: 17198 (R:GB)
Solid Wastes
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Spoil Banks
Compaction criteria for coal waste embankments. Open file report Feb 80-Aug 81, 8: 17115 (R:US)
Technology Assessment
Basic technologies in coal mining, 8: 17140 (RA:DE)
COAL PREPARATION
Cost Benefit Analysis
Acid rain: control strategies for coal-fired utility boilers. Volume I, 8: 17103 (R:US)

Mathematical Models
Dynamic modeling and simulation of froth flotation and vacuum-filtratrion units, 8: 17170 (R:US)
Solid Wastes
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Waste Disposal
Partial listing of coal waste embankments, surface and underground openings. Open file report (final) Mar 80-Aug 81, 8: 17112 (R:US)
Partial listing of coal waste embankments, surface and underground openings: appendix, volume I. Open file report (final) Mar 80-Aug 81, 8: 17113 (R:US)
Partial listing of coal waste embankments, surface and underground openings: appendix, volume II. Open file report (final) Mar 80-Aug 81, 8: 17114 (R:US)

COAL PREPARATION PLANTS
Jigs
Efficient use of modern coal preparation plant, 8: 17171 (RA:DE)
Program Management
Uneconomical practices of the purchasing function at the Pittsburgh and Midway Coal Company, 8: 17199 (R:US)
Solid Wastes
Feasibility of using cemented backfill in active underground coal mines to prevent subsidence. Open file report Apr 79-Nov 81, 8: 17151 (R:US)

COAL RESERVES
Poland's energy resources with special reference to black coal, 8: 18075 (BA:US)
Global Aspects
World coal resources and reserves (85% of coal resources are concentrated in USSR, USA, China), 8: 17137 (BA:US)

COAL SEAMS
Degassing
Natural gas from coalbeds, 8: 17286 (BA:US)

COAL TAR
Chemical Reactions
Coal-gasification and tar-conversion reactions over calcium oxide. Annual progress report, August 1, 1981-October 31, 1982, 8: 17026 (R:US)
Specifications
Low-temperature-tar content of bituminous materials. Part 2. Dense tarmacadam basecourse with crushed-rock aggregate, 8: 17081 (R:GB)
Thermal Cracking
Coal-gasification and tar-conversion reactions over calcium oxide. Annual progress report, August 1, 1981-October 31, 1982, 8: 17026 (R:US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED MHD GENERATORS
See also MHD GENERATOR CFFF
Disturbances
Analytical investigation of critical MHD phenomena. Annual report, September 1980 - September 1981, 8: 18128 (R:US)
End Effects
Analytical investigation of critical MHD phenomena. Annual report, September 1980 - September 1981, 8: 18128 (R:US)

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COASTAL REGIONS
Turbulence
RISO 78: mean profile and turbulence measurements at a shoreline escarpment1, 8: 18595 (R:DK)

COBALT
Catalytic Effects
Kinetics and mechanisms of catalytic hydroliquefaction and hydrogasification of lignite. Final technical report, 8: 17030 (R:US)
Surface spectroscopic characterization of cobalt-molybdenum-alumina catalysts, 8: 18341 (J:US)
Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
Photoacoustic Spectroscopy
Photoacoustic spectroscopy of chemically modified surfaces. Doctoral thesis, 8: 18306 (R:US)
Structural Chemical Analysis
Surface spectroscopic characterization of cobalt-molybdenum-alumina catalysts, 8: 18341 (J:US)
X-Ray Fluorescence Analysis
^{71}Ge ring source for X-ray fluorescent analysis, 8: 18315 (R:XJ:In Russian)

COBALT 58
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

COBALT 59 TARGET
Neon 20 Reactions
Energy transfer in deeply inelastic collisions with ^{20}Ne at 151 MeV, 8: 19156 (R:FR)

COBALT 60
Radioecological Concentration
Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed, 8: 19023 (J:GB)
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

COBALT BASE ALLOYS
See also TRIBALOY 400
TRIBALOY 800
Work Functions
Effective work function determination of selected superalloys, 8: 18251 (R:US)

COBALT COMPLEXES
Hot Atom Chemistry
Recoil chemistry and solid state exchange in cobalt complexes : a new model, 8: 18372 (R:IN)

COENZYMES
Immobilized Enzymes
Membrane reactors for continuous coenzyme regeneration, 8: 18816 (RA:US)

COFFEE
See BEVERAGES

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Heat and electricity from homogeneous waste, 8: 17554 (RA:DE:In German)
Economic Analysis
Cogeneration assessment methodology, 8: 17762 (R:US)
Feasibility of cogeneration retrofit for Illinois Center, 8: 18186 (R:US)
Feasibility Studies
Feasibility case study concerning refuse-burning modular incineration with cogeneration in Chicago. Energy management memorandum TM-82-3, 8: 18204 (R:US)
Feasibility of cogeneration for a single process industry. Energy management memorandum TM-82-5, 8: 18187 (R:US)
Residential and commercial cogeneration systems assessment. Final report mar 81-feb 82, 8: 17764 (R:US)
Study of the potential for cogeneration in Canada industrial steam turbines. Volume 1 - main report, 8: 18045 (B:CA)
Thermal-economic analysis of organic Rankine combined cycle cogeneration. ITT Energy management report TR-82-3, 8: 17751 (R:US)
Technology Assessment
Cogeneration assessment methodology, 8: 17762 (R:US)
Thermal Analysis
Feasibility of cogeneration retrofit for Illinois Center, 8: 18186 (R:US)

COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS

COILS (MAGNETIC)
See MAGNET COILS

COINCIDENCE METHODS
Calibration
Calibration of an active well coincidence counter for ^{235}U measurements, 8: 18544 (J:NL)
COKE
Chemical Composition
Investigation of the composition of tuyere coke by analyzing the surface material removed by abrasion. Carbonization research report (final), 8: 17094 (R:US)
The phosphorus content of coal and coke, 8: 17090 (R:US)
Chemical Reactions
A study of the reactivity of vitrain cokes in relation to their optical anisotropy. Carbonization research report (final), 8: 17095 (R:US)
Gasification
A study of the changes in coke structure and strength brought about by reaction with carbon dioxide at 1000 deg C. Carbonization research report (final), 8: 17096 (R:US)
Further studies of the partial gasification of coke in relation to the coke tensile strength, 8: 17053 (R:US)
Mechanical Properties
A study of the changes in coke structure and strength brought about by reaction with carbon dioxide at 1000 deg C. Carbonization research report (final), 8: 17096 (R:US)
Further considerations of the plastic layer thickness developed within a coke-oven charge. Carbonization research report, 8: 17055 (R:US)
Mechanical Tests
Studies of the size degradation of coke at ambient temperature, 8: 17091 (R:US)
Porosity
A study of the changes in coke structure and strength brought about by reaction with carbon dioxide at 1000 deg C. Carbonization research report (final), 8: 17096 (R:US)
Quality Control
Canadian R and D studies of partially briquetted coke oven charges - addition of non-coking coal and additives, 8: 17074 (B:CA)
Tensile Properties
A study of the influence of specimen size and rate of loading on the tensile strength of coke. Carbonization research report (final), 8: 17057 (R:US)
Changes in coke structure associated with preheating of the coal charge, 8: 17093 (R:US)
Testing
The evaluation of the Nippon Steel Corporation reactivity and post-reaction-strength test for coke, 8: 17092 (R:US)
COKE-OVEN GAS
See COAL GAS
COLLIERIES
See COAL MINES
COLOGNE SPIRITS
See ETHANOL
COLORADO
Coal Deposits
Colorado coal analyses, 1976-1979. Information series 10, 8: 17088 (R:US)
Electric Utilities
Developer handbook for Section 210 of PURPA for Colorado, 8: 18101 (R:US)
Energy Source Development
Energy resources of the Denver and Cheyenne Basins, Colorado - resource characteristics, development potential, and environmental problems. Environmental Geology 12, 8: 18747 (R:US)
Geothermal Resources
Appendices of an appraisal for the use of geothermal energy in state-owned buildings in Colorado. Section B: Buena Vista, 8: 17725 (R:US)
Bibliography of geothermal reports in Colorado, 8: 17690 (R:US)
Hydrology
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
Natural Gas Deposits
Western Gas Sands Project. Status report, April-June 1982, 8: 17281 (R:US)
Radioactive Waste Disposal
Recent hydrological observations from the Riverton and the Maybell tailings piles, 8: 17371 (R:US)
Resource Assessment
Appendices of an appraisal for the use of geothermal energy in state-owned buildings in Colorado. Section F. Steamboat Springs, 8: 17722 (R:US)
Stratigraphy
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
Uranium Deposits
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
COLORADO RIVER
Water Pollution Control
Characteristics and applications of Big Sandy River, Glenwood Springs, and Dotsero Springs waters in energy development, 8: 18763 (R:US)
COMBINED COLLECTORS
Design
DOE/General Electric Photovoltaic Concentrator Application Experiment, 8: 17592 (BA:US)
Performance
DOE/General Electric Photovoltaic Concentrator Application Experiment, 8: 17592 (BA:US)
COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS
COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Coal Gasification
Coal gasification - combined cycles for electricity production, 8: 17768 (B:CA)
Control Systems
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17755 (R:US)
Cost
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17755 (R:US)
Design
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17755 (R:US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17756 (R:US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume I, 8: 17752 (R:US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume II, 8: 17753 (R:US)
Economic Analysis
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant, 8: 17051 (R:US)
Thermal-economic analysis of organic Rankine combined cycle cogeneration. ITT Energy management report TR-82-3, 8: 17751 (R:US)
Electrostatic Precipitators
Pilot-scale assessment of conventional particulate control technology for pressurized fluidized-bed combustion emissions. Final report Mar 79-Jun 80, 8: 17773 (R:US)
Fabric Filters
Pilot-scale assessment of conventional particulate control technology for pressurized fluidized-bed combustion emissions. Final report Mar 79-Jun 80, 8: 17773 (R:US)
Fluidized-Bed Combustors
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume I, 8: 17752 (R:US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume II, 8: 17753 (R:US)

Test and evaluation of hot-gas cleanup devices, Phase I and II (Task 1). Technical progress report, March 1-May 31, 1982, 8: 17102 (R:US)

Gas Turbines
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8: 17750 (R:US)

Performance
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17756 (R:US)
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant, 8: 17051 (R:US)
Thermal-economic analysis of organic Rankine combined cycle cogeneration. ITT Energy management report TR-82-3, 8: 17751 (R:US)

Reliability
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17755 (R:US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17756 (R:US)

Technology Assessment
Coal gasification - combined cycles for electricity production, 8: 17768 (B:CA)

Thermal Efficiency
Coal fired power plants, 8: 17749 (RA:DE)

Topping Cycles
Thermal-economic analysis of organic Rankine combined cycle cogeneration. ITT Energy management report TR-82-3, 8: 17751 (R:US)

COMBUSTION
See also FLUIDIZED-BED COMBUSTION
IN-SITU COMBUSTION

Fuel Additives
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)

Mathematical Models
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 9, 1 October 1982-31 December 1982, 8: 17186 (R:US)
Comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows, 8: 18387 (R:US)

Probes
Combustion diagnostic instrumentation. part I: probe measurements. Final report Sep 81-Mar 82, 8: 18388 (R:US)

Test Facilities
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 9, 1 October 1982-31 December 1982, 8: 17186 (R:US)

COMBUSTION CHAMBERS

Design
Effect of combustion-chamber/fuel combination on high-speed knock. Final report, 8: 18219 (R:US)
Pulse combustion furnace Phase II: advancement of developmental technology. Annual report Jan-Dec 81, 8: 18478 (R:US)

Performance
Pulse combustion furnace Phase II: advancement of developmental technology. Annual report Jan-Dec 81, 8: 18478 (R:US)

COMBUSTION KINETICS

Research Programs
Studies of combustion kinetics and mechanisms. Progress report, January 1, 1982-December 31, 1982, 8: 18386 (R:US)

COMBUSTION PRODUCTS

Chemistry
Chemical effect of entrained particles in coal conversion streams. Third quarterly technical progress, February 1, 1981-April 30, 1982, 8: 17183 (R:US)

Hot Gas Cleanup
Test and evaluation of hot-gas cleanup devices, Phase I and II (Task 1). Technical progress report, March 1-May 31, 1982, 8: 17102 (R:US)

Mathematical Models
Chemical effect of entrained particles in coal conversion streams. Third quarterly technical progress, February 1, 1981-April 30, 1982, 8: 17183 (R:US)

Particle Size
Optical double-slit particle measuring system, 8: 18417 (P:US)

Plasma Diagnostics
Simultaneous multipoint measurements of density gradients and temperature in a flame. Progress report, July 1, 1982-January 31, 1983, 8: 19286 (R:US)

Turbulence
Simultaneous multipoint measurements of density gradients and temperature in a flame. Progress report, July 1, 1982-January 31, 1983, 8: 19286 (R:US)

Turbulent Flow
Additive thermochemical effects in turbulent erosive boundary layers, 8: 18563 (R:US)

Two-Phase Flow
Additive thermochemical effects in turbulent erosive boundary layers, 8: 18563 (R:US)

COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS

Design
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8: 17750 (R:US)
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Regeneratively cooled coal combustor/gasifier with integral dry ash removal, 8: 18480 (P:US)

Mass Transfer
Mass and momentum turbulent transport experiments with confined coaxial jets, 8: 18475 (R:US)

Operation
Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1. Construction of apparatus and preliminary experiments, 8: 18382 (R:US)

Performance
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8: 17750 (R:US)

Performance Testing
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)

Soot
Effect of flame temperature and fuel composition on sooting tendency in a research combustor. Interim report Jun 80-Oct 81, 8: 17253 (R:US)

COMMERCIAL BUILDINGS
See also HOTELS
RESTAURANTS
SHOPPING CENTERS

Cogeneration
Feasibility of cogeneration retrofit for Illinois Center, 8: 18186 (R:US)

Energy Conservation
Innovative financing for energy-efficiency improvements: model documents and financial projections. Phase II report, 8: 18047 (R:US)

Solar Air Conditioning
Assessment of the National Program for Solar Heating and Cooling of Commercial Buildings, 8: 17656 (R:US)

Solar Space Heating
Assessment of the National Program for Solar Heating and Cooling of Commercial Buildings, 8: 17656 (R:US)

COMMERCIAL SECTOR

Cogeneration
Residential and commercial cogeneration systems assessment. Final report mar 81-feb 82, 8: 17764 (R:US)

COMMUNICATIONS

Computer-Aided Design
Putting microcomputers to work in follow-up systems design, 8: 18469 (RA:US)

Computerized Simulation
C^3 and combat simulation - a survey, 8: 19390 (R:US)

COMMUNITIES
See also PLANNED COMMUNITIES

Energy Models
Local energy-management process, 8: 17988 (R:US)

COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Plasma Acceleration
Acceleration of magnetized plasma rings, 8: 19301 (R:US)
COMPARATIVE EVALUATIONS
To be indexed in coordination with the concepts being compared.
Decision Making
Expert opinion and ranking methods, 8: 19378 (R:US)
COMPLEX TERRAIN
Meteorology
Spatially averaging cross-wind sensors and numerical-model results for nocturnal drainage winds in complex terrain, 8: 18597 (R:US)
COMPOSITE MATERIALS
Chemical Preparation
Amine plasma modification of polyaramid filaments, 8: 18292 (R:US)
Electric Conductivity
HIgh-temperature electrical conductivity and thermal decomposition of Sylgard 184 and 184/GMB, 8: 18295 (R:US)
Fabrication
Method of making amorphous metal composites (Patent), 8: 18272 (P:US)
Failures
Probabilistic models of the stress-rupture of composite materials. Phase VI. Progress report, for the period June 15, 1982 to June 14, 1983, 8: 18289 (R:US)
Materials Testing
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)
Mechanical Properties
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites, 8: 18291 (R:US)
Microstructure
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)
Moisture
Diffusion mechanisms and degradation of environmentally sensitive composite materials. July 1, 1977 - June 30, 1982. Final report, 8: 18290 (R:US)
Physical Radiation Effects
Effects of high energy radiation on the mechanical properties of epoxy/graphite fiber composites, 8: 18291 (R:US)
Pyrolysis
HIgh-temperature electrical conductivity and thermal decomposition of Sylgard 184 and 184/GMB, 8: 18295 (R:US)
Uses
Potential of composite materials in surface transportation applications, 8: 18293 (R:US)
COMPOSITE MODELS
See also QUARK MODEL
Composite fermions and Higgs scalars, an explanation for multiple generations, 8: 19101 (R:US)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSED AIR ENERGY STORAGE
Economic Analysis
Fixed-base flywheel storage systems for electric-utility applications: an assessment of economic viability and R and D priorities, 8: 17969 (R:US)
COMPRESSED AIR STORAGE POWER PLANTS
Design
Electric power generating plant having direct coupled steam and compressed air cycles, 8: 17967 (P:US)
Economic Analysis
Preliminary study of adiabatic compressed-air energy storage in aquifers (Performance analysis using CYCLOPS computer code), 8: 17966 (R:US)
Performance
Preliminary study of adiabatic compressed-air energy storage in aquifers (Performance analysis using CYCLOPS computer code), 8: 17966 (R:US)
Thermodynamic Cycles
Preliminary study of adiabatic compressed-air energy storage in aquifers (Performance analysis using CYCLOPS computer code), 8: 17966 (R:US)
COMPRESSOR BLADES
Stress Analysis
Contribution to the analysis of the stress-elasticity behaviour of radial-flow compressor wheels, 8: 18408 (R:DE:In German)
COMPRESSORS
See also GAS COMPRESSORS
Performance Testing
Final report on the testing of the Mannesmann Demag oxygen compressor, 8: 18397 (R:US)
Specifications
Final report on the testing of the Mannesmann Demag oxygen compressor, 8: 18397 (R:US)
COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
A general purpose computer program for multidimensional one and two phase flow, 8: 18454 (R:GB)
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes, 8: 17944 (R:GB)
Thermodynamic consistency test procedure using orthogonal collocation and the Peng-Robinson equation of state, 8: 18336 (R:US)
A Codes
First accident simulation for Angra-1 power plant using the ALMOD computer code, 8: 17917 (R:BR:In Portuguese)
B Codes
Graphical metafile Bilderbuch (picture book), 8: 19374 (R:DE:GE)
C Codes
Analysis of the metallic containment integrity of Angra 2/3 reactor under the effects of the design basis accident, 8: 17918 (R:BR:In Portuguese)
Application of gamma-spectrometry to post irradiation examination (CAERI code), 8: 17899 (R:KR:In Korean)
CYCLE: a general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems, 8: 18211 (R:NL)
D Codes
DRAC: a user-friendly computer code for modeling transient thermohydraulic phenomena in solar-receiver tubing, 8: 17643 (R:US)
E Codes
EXPANDA-General user's guide, 8: 19238 (R:JP)
Generation of 26 group constant library for fast reactor calculations (ETOX-K4 Code), 8: 17851 (R:KR:In Korean)
F Codes
FEDSOL: program user's manual and economic optimization guide for solar federal building projects. Final report, 8: 17671 (R:US)
FISPET: a code for computing fission spectra from ENDF/B, 8: 17895 (R:IT)
Long-term, mid-term, and short-term fuel scheduling. Volume 1. User's guide. Final report (FTFS and MTFGS computer codes), 8: 18105 (R:US)
Long-term, mid-term, and short-term fuel scheduling. Volume 2. Programmer's guide. Final report (FTFS and MTFGS computer codes), 8: 18106 (R:US)
Wind-turbine-blade stress analysis and natural frequencies (MOMENTS, FREQ), 8: 17743 (R:US)
G Codes
GRUKON software package. Part 1. Data processing code, 8: 19227 (R:SU:In Russian)
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions, 8: 17688 (R:US)
H Codes
HEMPDS user's manual, 8: 19386 (R:US)
HPOF transmission-system economic-evaluation program. Final report, 8: 17783 (R:US)

I Codes
ICPSEF: a user's manual for the computer mathematical model of the ICPP purex solvent extraction system, 8: 17330 (R:US)
M Codes
Computer program MIGEL and its uses, 8: 19361 (R:IT:IT)
Long-term, mid-term, and short-term fuel scheduling. Volume 1. User's guide. Final report (FTFS and MTFGS computer codes), 8: 18105 (R:US)
Long-term, mid-term, and short-term fuel scheduling. Volume 2. Programmer's guide. Final report (FTFS and MTFGS computer codes), 8: 18106 (R:US)
MMK 22p code for calculating the neutron flux by the Monte-Carlo method in the subgroup approximation, 8: 19226 (R:SU:In Russian)
Wind-turbine-blade stress analysis and natural frequencies (MOMENTS, FREQ), 8: 17743 (R:US)
O Codes
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-dimensional and 3-dimensional crack models (PWR;BWR), 8: 17804 (R:US)
OMNI user guide for the Energy Information Administration, 8: 19367 (R:US)
P Codes
Modification of the Purdue University physical properties package (PPROP) to allow the handling of streams containing solids, 8: 19381 (R:US)
R Codes
LOCA/ECCS evaluation code development (RELAP4/MOD6 Code, RELPLOT Code, WREM/KAERI Code), 8: 17839 (R:KR:In Korean)
One-dimensional system analysis code for reflood phase during LOCA, 8: 17835 (R:JP)
ROM-78 computer code: Calculation of cross-sections of elastic scattering of particles on nuclei in the framework of the optical model, 8: 19197 (R:SU:In Russian)
SURE: a system of computer codes for performing sensitivity/uncertainty analyses with the RELAP code (PWR), 8: 17958 (R:US)
S Codes
STOP: a fast method of disjointing binary product sets, 8: 19388 (R:US)
T Codes
Complex reactor cell calculation by means of consecutive use of the one-dimensional algorithms based on the DSsub(n)-method (TESI-2S code), 8: 17834 (R:SU:In Russian)
Through calculation of 1,100 MWe PWR large break LOCA by THYDE-P. Sample calculation Run 20, 8: 17836 (R:JP)
W Codes
LOCA/ECCS evaluation code development (RELAP4/MOD6 Code, RELPLOT Code, WREM/KAERI Code), 8: 17839 (R:KR:In Korean)

COMPUTER GRAPHICS
Thoughts on the evolution of dynamic graphics, 8: 19362 (R:US)
Computer Codes
Graphical metafile Bilderbuch (picture book), 8: 19374 (R:DE:GE)
Data Analysis
Interactive graphical data analysis. Annual progress report, March 25, 1982-March 24, 1983, 8: 19369 (R:US)

COMPUTER LANGUAGES
See PROGRAMMING LANGUAGES

COMPUTER NETWORKS
Magnetic fusion energy and computers. The role of computing in magnetic fusion energy research and development (second edition), 8: 19321 (R:US)
Translators
Protocol translation and translators for heterogeneous computer networks, 8: 19389 (R:US)

COMPUTER PROGRAMMING
See PROGRAMMING

COMPUTER PROGRAMS
See COMPUTER CODES

COMPUTER-AIDED DESIGN
Microprocessors
Putting microcomputers to work in follow-up systems design, 8: 18469 (RA:US)

COMPUTERIZED CONTROL SYSTEMS
Transition control system for procedure prompting (LMFBR), 8: 17902 (R:US)

COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
Accuracy
Twelve years nuclear medicine - results and outlook - illustrated by 7414 cerebral scintigrams, 8: 18833 (R:DE:In German)
Standards
Criteria and standards: CT scanning services, 8: 18831 (R:US)

COMPUTERS
See also CRAY COMPUTERS
MICROPROCESSORS
Control Systems
ACON: a multipurpose production controller for plasma physics codes, 8: 19377 (R:US)
Equipment Interfaces
Illinois I/O Register to FASTBUS Interface, 8: 19368 (R:US)
Photovoltaic Power Supplies
Intermediate photovoltaic system application experiment operational performance report. Newman Power Station, El Paso, Texas for November 1982. Volume 17, 8: 17630 (R:US)
Intermediate photovoltaic system application experiment operational performance report for Newman Power Station, El Paso, Texas for September 1982. Volume 15, 8: 17629 (R:US)

CONCENTRATING COLLECTORS
Design
Analysis, design, fabrication, and testing of moderately concentrating solar-energy collectors. Final report, June 1976-December 1979, 8: 17680 (R:US)
Fabrication
Analysis, design, fabrication, and testing of moderately concentrating solar-energy collectors. Final report, June 1976-December 1979, 8: 17680 (R:US)

CONCENTRATIONS (RADIONUCLIDES)
See RADIOACTIVITY

CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Cooling
Heat pipe for passive cooling of concentrator solar cells, 8: 17591 (BA:US)
Design
DOE/General Electric Photovoltaic Concentrator Application Experiment, 8: 17592 (BA:US)
Efficiency
High efficiency concentrator cells, 8: 17594 (BA:US)
Improved silicon solar cells for high concentration levels, 8: 17593 (BA:US)
Electric Currents
Nonlinear response of GaAs concentrator cells to solar insolation, 8: 17596 (BA:US)
Fabrication
Improved silicon solar cells for high concentration levels, 8: 17593 (BA:US)
Heat Pipes
Heat pipe for passive cooling of concentrator solar cells, 8: 17591 (BA:US)
Mathematical Models
Shading analysis of a photovoltaic cell string illuminated by a parabolic trough concentrator, 8: 17590 (BA:US)
Nonlinear Problems
Nonlinear response of GaAs concentrator cells to solar insolation, 8: 17596 (BA:US)

Optical Filters
A 10-unit dichroic filter spectral splitter module, 8: 17598 (BA:US)
High concentration in gaas photovoltaic systems, 8: 17542 (R:IT:In Italian)
Performance
DOE/General Electric Photovoltaic Concentrator Application Experiment, 8: 17592 (BA:US)
Performance Testing
Photovoltaic concentrator test results and interpretations, 8: 17599 (BA:US)
Reviews
High efficiency concentrator cells, 8: 17594 (BA:US)
Shading
Shading analysis of a photovoltaic cell string illuminated by a parabolic trough concentrator, 8: 17590 (BA:US)

CONCRETES
Anchors
USNRC anchor bolt study data survey and dynamic testing. Final report, 8: 18460 (R:US)
Chemical Reactions
Chemical interaction of clay buffer materials and concrete, 8: 17415 (R:SE)
Solidification
Quick setting water-compatible furfuryl alcohol polymer concretes (Patent), 8: 18303 (P:US)

CONDENSED AROMATICS
See also ANTHRACENE
NAPHTHALENE
Gas Chromatography
Characterization of coal-liquefaction fractions. Final report, 8: 17022 (R:US)
Mass Spectroscopy
Characterization of coal-liquefaction fractions. Final report, 8: 17022 (R:US)

CONGENITAL DISEASES
Gene Mutations
Identify and characterize various strains of mammalian cells deficient in repair of DNA damage, 8: 18891 (BA:XE)

CONGO DEMOCRATIC REPUBLIC
See ZAIRE REPUBLIC

CONNECTICUT
Electric Utilities
Developer handbook for Section 210 of PURPA for Connecticut, 8: 18098 (R:US)
Public Utility Commission manual for Section 210 of PURPA for Connecticut, 8: 18095 (R:US)

CONSERVATION (ENERGY)
See ENERGY CONSERVATION

CONSERVATION (RESOURCE)
See RESOURCE CONSERVATION

CONSTRUCTION
Legal Aspects
Preliminary identification of areas subject to construction bans under the Clean Air Act and analysis of related issues. Final report, 8: 18063 (R:US)

CONSTRUCTION INDUSTRY
Thermal efficiency in existing housing and the potential for conservation: background papers, 8: 18152 (R:US)
Regulations
Preliminary identification of areas subject to construction bans under the Clean Air Act and analysis of related issues. Final report, 8: 18063 (R:US)

CONTACT RADIOTHERAPY
See RADIOTHERAPY

CONTACTS (ELECTRIC)
See ELECTRIC CONTACTS

CONTAINMENT BUILDINGS
Heat Transfer
Water entrainment in intercompartmental flow. Final report (PWR; BWR), 8: 17932 (R:US)
Hydraulics
Water entrainment in intercompartmental flow. Final report (PWR; BWR), 8: 17932 (R:US)

CONTAINMENT SHELLS
Dose Rates
Dose rate calculations inside the containment shell of a PWR in case of an accident, 8: 17916 (R:FR:In French)
Impact Shock
Automobile impact forces on concrete wall panels. Technical report, 8: 17950 (R:US)
Seismic Effects
Strength and stiffness of uniaxially tensioned reinforced concrete panels subjected to membrane shear. Technical report, 8: 17949 (R:US)

CONTAINMENT SYSTEMS
Failures
Conceptual design of alternative core melt mitigation systems for a PWR with an ice-condenser containment, 8: 17956 (R:US)
Fault Tree Analysis
Conceptual design of alternative core melt mitigation systems for a PWR with an ice-condenser containment, 8: 17956 (R:US)

CONTAMINATION (INTERNAL)
See RADIONUCLIDE KINETICS

CONTENT ANALYSIS
See CHEMICAL ANALYSIS

CONTINENTAL SHELF
Natural Gas Deposits
Repeal of unneeded Outer Continental Shelf production rate-setting functions would cut costs, 8: 17224 (R:US)
Petroleum Deposits
Repeal of unneeded Outer Continental Shelf production rate-setting functions would cut costs, 8: 17224 (R:US)

CONTRACT MANAGEMENT
See PROGRAM MANAGEMENT

CONTROL (RADIOACTIVITY)
See RADIATION MONITORING

CONTROL THEORY (REACTOR)
See REACTOR KINETICS

CONVECTION
See also NATURAL CONVECTION
Research Programs
Passive research and development, 8: 17663 (RA:US)

CONVERTERS (ANALOG-DIGITAL)
See ANALOG-TO-DIGITAL CONVERTERS

COOK-1 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: D. C. Cook case study. Technical report 1 Oct 78-4 Jan 82, 8: 17875 (R:US)

COOK-2 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: D. C. Cook case study. Technical report 1 Oct 78-4 Jan 82, 8: 17875 (R:US)

COOLERS
See HEAT EXCHANGERS

COOLING PONDS
Management
Management of cooling ponds and lakes for fish and wildlife - a guidance manual. Final report, 8: 17778 (R:US)

COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS

COOLING SYSTEMS
See also REACTOR COOLING SYSTEMS
THERMONUCLEAR REACTOR COOLING SYSTEMS
Evaporative Cooling
Use of an overall heat-transfer coefficient to calculate performance of an evaporative cooler, 8: 18196 (R:US)
Performance
Use of an overall heat-transfer coefficient to calculate performance of an evaporative cooler, 8: 18196 (R:US)

COOLING TOWERS
Heat Transfer
Study of a conceptual nuclear-energy center at Green River, Utah: potential alternative heat-rejection systems, 8: 17808 (R:US)
Thermodynamics
Study of a conceptual nuclear-energy center at Green River, Utah: potential alternative heat-rejection systems, 8: 17808 (R:US)

COOLING WATER CHEMICAL TREATMENT
See WATER CHEMISTRY
COPPER
Activation Analysis
Activation analytical determination of essential and toxic trace elements in biological material, 8: 18312 (R:DE:In German)
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Ecological Concentration
Time-series analysis for identification of particle-emission sources, 8: 18589 (R:US)
Electroplating
Development of technique for AR coating and nickel and copper metallization of solar cells. Final report, 8: 17544 (R:US)
Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
Ion Collisions
Medium dependence of charge state fractions of MeV He beam, 8: 19056 (RA:US)
Photoneutrons
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Photonuclear Reactions
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Proton Transport
Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons, 8: 19209 (RA:US)
Smelting
Environmental consideration for emerging copper winning processes. Final report Jul 79-Apr 81, 8: 18614 (R:US)
Toxicity
The effect of water chlorination on the toxicity of copper to phytoplankton. Final report, 8: 18981 (R:US)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
COPPER 64
Microdosimetry
Biological effects of incorporated isotopes and radiation of high ionization density, 8: 18873 (BA:XE)
COPPER 65 REACTIONS
Fusion Reactions
Competition between a few nucleon emission and γ-deexcitation for the system $^{65}Cu + {}^{87}Rb \rightarrow {}^{152}Dy^{*}$ at E*approximately54 MeV, 8: 19162 (R:FR)
COPPER HYDRIDES
Crystal Structure
Hydrogen mobility at high concentrations, 8: 18288 (BA:US)
COPPER IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s²3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
COPPER ORES
Ownership
Changing ownership within the US minerals industry: possible causes and steps needed to determine the effects, 8: 18072 (R:US)
CORES (REACTOR)
See REACTOR CORES
CORN STOVER
See AGRICULTURAL WASTES
CORONA (SOLAR)
See SOLAR CORONA
CORROSION PRODUCTS
BWR cobalt-source identification. Final report, 8: 17795 (R:US)
Chemical Composition
Solid-state and solution chemistry in the study of metal oxides behavior in steam generators, 8: 17811 (R:IT:IT)
Radioactivity Transport
Laboratory investigations of the behaviour of radioactive corrosion products in primary circuits of pressurized water reactors. Summary of results for the period 1973 to 1980, 8: 17845 (R:DD:In German)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
Meetings
Conference papers. 17. International cosmic ray conference. Vol. 12, invited papers, 8: 19042 (B:FR)
COSMOGONY
See COSMOLOGY
COSMOLOGY
Meetings
Progress in cosmology. Proceedings of the Oxford international symposium held in Christ Church, Oxford, September 14-18, 1981, 8: 19043 (B:NL)
COSO HOT SPRINGS
Geochemical Surveys
Coso monitoring program. Summary report Jan-Dec 80, 8: 17693 (R:US)
Hydrology
Coso monitoring program. Summary report Jan-Dec 80, 8: 17693 (R:US)
COSTA RICA
Power Systems
The product is progress: rural electrification in Costa Rica. Project impact evaluation No. 22, 8: 18115 (R:US)
COUETTE FLOW
Diffusion
Diffusion in Poiseuille and Couette flows of binary mixtures of incompressible newtonian fluids, 8: 18457 (R:BR)
COUNTERFLOW COOLING TOWERS
See COOLING TOWERS
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUNTY BUILDINGS
See PUBLIC BUILDINGS
COUPLINGS
Design
Helix coupling, 8: 18484 (P:US)
COURT BUILDINGS
See PUBLIC BUILDINGS
COVERINGS
Cost
Cost and effectiveness of radon barrier systems (Earthen, asphalt, and multi-layer radon barrier systems), 8: 17449 (R:US)
Design
Systematic approach to designing surface covers for uranium-mill tailings, 8: 17432 (R:US)
Impact Strength
Full-scale turbine-missile-casing tests. Final report (PWR; BWR), 8: 17797 (R:US)
Performance Testing
Full-scale turbine-missile-casing tests. Final report (PWR; BWR), 8: 17797 (R:US)
CRACK GROWTH
See CRACK PROPAGATION
CRACK PROPAGATION
Numerical Solution
Numerical calculation of the J-integral in the case of stable crack growth, 8: 18398 (R:DE:In German)
CRAY COMPUTERS
Control Systems
ACON: a multipurpose production controller for plasma physics codes, 8: 19377 (R:US)
CREDITS
See FINANCIAL DATA
CREEKS
See STREAMS
CRITICAL HEAT FLUX
Computer Calculations
Parametric study of CHF data. Volume 2. A generalized subchannel CHF correlation for PWR and BWR fuel assemblies. Final report, 8: 17930 (R:US)

CRITICALITY ACCIDENTS
See RADIATION ACCIDENTS
CROPS
Biological Effects
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Economic Impact
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Losses
Crop and forest losses due to current and projected emissions from coal-fired power plants in the Ohio River Basin, 8: 18733 (R:US)
Plant Growth
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
CROSSFLOW COOLING TOWERS
See COOLING TOWERS
CRUDE OIL
See PETROLEUM
CRYSTAL RIVER-3 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Crystal River Unit 3 case study. Technical report 1 Oct 78-4 Jan 82, 8: 17874 (R:US)
CRYSTALS

DETECTORS (RADIATION)
See RADIATION DETECTORS

DETONATORS
Feasibility Studies
Assessment of a high-energy coordination compound, 8: 18562 (R:US)

DEUTERIUM
Atom-Molecule Collisions
Experimental determination of initial vibrational and rotational energy distributions from the reaction of atomic deuterium with molecular fluorine. Final scientific report 1 Jun 80-1 Jul 81, 8: 19052 (R:US)
Desorption
Electron-stimulated desorption from condensed branched alkanes, 8: 18368 (R:US)
Diffusion
Ion-gun tritium-permeation testing, 8: 19332 (R:US)
Isotope Effects
Ab initio calculation of the transition-state properties and addition rate constants for H + C_2H_2 and selected isotopic analogues, 8: 18350 (J:US)
Electron-stimulated desorption from condensed branched alkanes, 8: 18368 (R:US)
Hydrogen mobility at high concentrations, 8: 18288 (BA:US)
Rates of reactions of O(^{3}P) with xylenes, 8: 18354 (J:US)

DEUTERIUM COMPOUNDS
See also DEUTERIUM TRITIDES
Chemical Radiation Effects
Electron-stimulated desorption from condensed branched alkanes (Tetramethylsilane, deuterated isomers of isobutane), 8: 18368 (R:US)
Chemical Reaction Kinetics
Rates of reactions of O(^{3}P) with benzene and toluene, 8: 18353 (J:US)
Rates of reactions of O(^{3}P) with xylenes, 8: 18354 (J:US)

DEUTERIUM OXIDES
See HEAVY WATER

DEUTERIUM TARGET
Antiproton Reactions
Cross sections of low-energy anti pD interaction, 8: 19138 (R:SU)
Neutron Reactions
Differential cross section measurement of the elastic neutron-deuteron-scattering in the energy range 2.5-30 MeV, 8: 19142 (R:DE:In German)
Evaluation of neutron nuclear data for deuterium, 8: 19144 (R:JP)
Proton Reactions
Correlation effect in the NN-interaction and pd-scattering, 8: 19140 (R:UA:In Russian)

DEUTERIUM TRITIDES
Chemical Reaction Kinetics
Reaction of liquid and solid D_2-T_2, 8: 17471 (J:GB)

DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES

DEUTERON REACTIONS
Cross Sections
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Excitation Functions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
Nuclear Potential
Generalized optical potentials of light particle interaction with 1p shell nuclei, 8: 19149 (RA:SU:In Russian)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEVELOPING COUNTRIES

Economic Growth
Apples, oranges, and the comparison of alternative energy technologies, 8: 18032 (BA:US)
Government policies and subsidies to energy, 8: 18008 (BA:US)
Energy Conservation
Settlements and energy: economic and community development throughout the world in the 1980's. Final report, 8: 18799 (R:US)
Energy Demand
Need for a diversity of energy sources, 8: 18031 (BA:US)
Energy Efficiency
Analytic tools for techno-economic assessments of industrial energy efficiency in developing countries, 8: 17997 (R:US)
Energy Policy
Some considerations regarding energy resource development in areas without adequate infrastructure, 8: 18011 (BA:US)
Energy Source Development
Energy development through industrial cooperation, 8: 18010 (BA:US)
Forests
Changes needed in US assistance to deter deforestation in developing countries, 8: 18027 (R:US)
International Cooperation
Energy development through industrial cooperation, 8: 18010 (BA:US)
Natural Gas Industry
Natural gas prospects in developing countries and the role of LNG transportation, 8: 17264 (BA:US)
Resource Conservation
Changes needed in US assistance to deter deforestation in developing countries, 8: 18027 (R:US)
Resource Development
Federal encouragement of mining investment in developing countries for strategic and critical minerals has been only marginally effective, 8: 18026 (R:US)

Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Risk Assessment
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)

ENERGY EXPENSES
Consumer Protection
Review of the Energy Productivity Center's least-cost energy-strategy study. Interim report, 8: 18856 (R:US)

ENERGY INFORMATION ADMINISTRATION
Accounting
Developing validation strategies for the financial reporting system. Annotated bibliography, 8: 18061 (R:US)
Bibliographies
Developing validation strategies for the financial reporting system. Annotated bibliography, 8: 18061 (R:US)

ENERGY MODELS
1981 annual report to Congress, 8: 17994 (R:US)
1981 annual report to Congress, 8: 17995 (R:US)
Measures of value in a linear-programming model of the US energy system, 8: 18050 (R:US)
Energy Policy
Institute for Energy Analysis research report 1982, 8: 18805 (R:US)
Evaluation
Review of the Energy Productivity Center's least-cost energy-strategy study. Interim report, 8: 18856 (R:US)
L Codes
1981 annual report to Congress, 8: 17996 (R:US)
P Codes
Modified aggregation program for the PILOT Process Integrated Model. Technical report SOL 80-31, 8: 17998 (R:US)

ENERGY POLICY
Annual report for the year ending September 30, 1981, 8: 18002 (R:US)
Federal Nuclear Energy Program: a synopsis, 8: 17791 (R:US)
Institute for Energy Analysis research report 1982, 8: 18805 (R:US)
Sunset Review. Volume 3. Program-by-program analysis. Appendix: summary tables, 8: 18066 (R:US)
Economic Impact
Macroeconomic implications of energy policy. Final report, 8: 18005 (R:US)
Planning
Highlights of the new U.S. Energy Policy Plan, 8: 18068 (J:NL)

ENERGY SHORTAGES
Emergency Plans
Determination of oil price in the International-Emergency Sharing System: an unresolved issue, 8: 18073 (R:US)
Transportation energy contingency planning: a guide for transit operators, 8: 18053 (R:US)

ENERGY SOURCE DEVELOPMENT
Appropriate Technology
Some considerations regarding energy resource development in areas without adequate infrastructure, 8: 18011 (BA:US)
Capitalized Cost
Past trends of capital-output and investment ratios in the field of energy in the ECE region (ECE: North America, Europe, and USSR), 8: 18013 (BA:US)
Diversification
Motivation and attitudes in the long-term planning of alternative energy structure (Romania), 8: 18012 (BA:US)
Environmental Impacts
Energy resources of the Denver and Cheyenne Basins, Colorado - resource characteristics, development potential, and environmental problems. Environmental Geology 12, 8: 18747 (R:US)
Health risks of energy technologies, 8: 18807 (B:US)
Environmental Policy
Environmental hazards from energy production and use, 8: 18023 (BA:US)
Financing
Political and financial aspects (Switzerland), 8: 17246 (RA:DE:In German)
Health Hazards
Health risks of energy technologies, 8: 18807 (B:US)
Planning
Simplified algorithms for computing dynamic solutions to multi-regional planning models. Technical report SOL 81-2, 8: 17989 (R:US)
Regional Analysis
Design study for a regional energy development corporation. Final report (New York State), 8: 18037 (R:US)
Risk Assessment
Apples, oranges, and the comparison of alternative energy technologies, 8: 18032 (BA:US)
Health risks of energy technologies, 8: 18807 (B:US)
Subsidies
Government policies and subsidies to energy, 8: 18008 (BA:US)
ENERGY SOURCES
See also FOSSIL FUELS
NUCLEAR FUELS
RENEWABLE ENERGY SOURCES
Economic Development
The energy connection: incorporating energy concerns in the economic development process, 8: 18801 (R:US)
Management
Settlements and energy: economic and community development throughout the world in the 1980's. Final report, 8: 18799 (R:US)
Meetings
Long-term energy resources. Volume I, 8: 18029 (B:US)
Public Opinion
Philippine survey of public attitudes towards alternative energy systems (Pilot Study), 8: 18003 (R:PH)
ENERGY STORAGE SYSTEMS
Hydraulic Accumulators
Hydraulic accumulators as energy storage systems, 8: 17968 (B:DE:In German)
ENERGY SUPPLIES
See also FUEL SUPPLIES
Data Base Management
Africa energy survey methodology. Volume II: Appendix II, data base, 8: 18055 (R:US)
Diversification
Need for a diversity of energy sources, 8: 18031 (BA:US)
Economic Analysis
Perspectives on decentralization (USA), 8: 18009 (BA:US)
Electric Power
Energy and the quality of life, 8: 18108 (R:CA)
Forecasting
Chairman's address. World energy needs and supply, 8: 18051 (R:CA)
Future natural gas supply and demand balance. Final report, 8: 17272 (R:US)
Planning
Annual report for the year ending September 30, 1981, 8: 18002 (R:US)
ENERGY TAX ACT
Support to CS in the redraft of SEMP legislation, 8: 18060 (R:US)
ENGINEERED SAFETY SYSTEMS
See also AIR CLEANING SYSTEMS
CONTAINMENT SYSTEMS
Cost
Cost and effectiveness of radon barrier systems (Earthen, asphalt, and multi-layer radon barrier systems), 8: 17449 (R:US)
Cost Benefit Analysis
Severe Accident Risk Reduction Program (PWR; BWR), 8: 17962 (R:US)
Value-impact analysis of severe-accident prevention and mitigation systems (PWR;BWR), 8: 17961 (R:US)
ENGINES
For machines with self-contained energy sources; for machines utilizing external energy sources for normal operation see MOTORS.
See also TURBOJET ENGINES
Exhaust Gases
Interim report for EPA/EMA cooperative test program. Technical report, 8: 18643 (R:US)
ENGLAND

ENHANCED RECOVERY
Coordinated Research Programs
Western Gas Sands Project. Status report, April-June 1982, 8: 17281 (R:US)
Microorganisms
Role of microbiology in enhanced oil recovery, 8: 18076 (BA:US)
Research Programs
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8: 17213 (R:US)
ENTITLEMENTS PROGRAM
Exceptions
Entitlements exemptions for new refiners, 8: 17244 (R:US)
Violations
Entitlements exemptions for new refiners, 8: 17244 (R:US)
ENVIRONMENT
Management
Local energy-management process, 8: 17988 (R:US)
ENVIRONMENTAL EXPOSURE PATHWAY
Mathematical Models
Critical considerations in the assessment of health and environmental risks: what we have learned from the nuclear experience, 8: 18725 (R:US)
ENVIRONMENTAL IMPACT STATEMENTS
Recommendations
Feasibility of an EIS Follow-up Program, 8: 18806 (R:US)
ENVIRONMENTAL IMPACTS
This descriptor is to be used to describe the possible effects on the environment from a proposed project.
Environmental and radiological safety studies: interaction of $^{238}PuO_2$ heat sources with terrestrial and aquatic environments. Progress report, July 1-September 30, 1982, 8: 17478 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: licensing considerations, 8: 17885 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: water allocation issues, 8: 17908 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: regional considerations, 8: 17907 (R:US)
Monitoring
Application of fisheries-management techniques to assessing impacts, 8: 17906 (R:US)
ENVIRONMENTAL MATERIALS
Use only for unspecified samples from the environment. See also specific environmental materials.
Chemical Analysis
Quality assurance for environmental analytical chemistry: 1981, 8: 18317 (R:US)
ENVIRONMENTAL POLICY
Feasibility of an EIS Follow-up Program, 8: 18806 (R:US)

Preliminary identification of areas subject to construction bans under the Clean Air Act and analysis of related issues. Final report, 8: 18063 (R:US)

Input-Output Analysis

Environmental protection and sectoral structural changes, 8: 18796 (R:DE:In German)

ENVIRONMENTAL PROTECTION AGENCY

See US EPA

ENVIRONMENTAL TRANSPORT

See also RADIONUCLIDE MIGRATION

Mathematical Models

Transfer and deposition of particles to water surfaces, 8: 18690 (BA:US)

User's guide for a long-range multi-layer atmospheric transport and dispersion model. Technical memo, 8: 18663 (R:US)

User's manual for the instream sediment-contaminant transport model SERATRA. Final report Apr 78-Jan 80, 8: 17446 (R:US)

ENZYMATIC HYDROLYSIS

Meetings

Biotechnology for the production of chemicals and fuels from biomass, 8: 17504 (R:US)

ENZYMES

The enzyme code numbers from ENZYME NOMENCLATURE: RECOMMENDATIONS (1972) OF THE INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY AND THE INTERNATIONAL UNION OF BIOCHEMISTRY is given in a Scope Note for the individual enzymes.

Measuring Methods

Primary enzyme quantitation, 8: 18809 (P:US)

EOR

See ENHANCED RECOVERY

EPA

See US EPA

EPDM

See ETHYLENE PROPYLENE DIENE POLYMERS

EPIDEMIOLOGY

C Codes

Evaluation of CHESS: Utah asthma study, 1971-1972. Final report, 8: 18601 (R:US)

EPIPHYSIS (BONES)

See BONE TISSUES

EQUATIONS (DIFFERENTIAL)

See DIFFERENTIAL EQUATIONS

EQUATIONS OF MOTION

Direct and inverse variational characterization of linear nonconservative systems, 8: 19268 (J:US)

EQUATIONS OF STATE

Computer Calculations

Thermodynamic consistency test procedure using orthogonal collocation and the Peng-Robinson equation of state, 8: 18336 (R:US)

EQUIPMENT

Use of a more specific term is recommended.

ETHANAL

See ACETALDEHYDE

ETHANE

Hydrogenation

Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)

1,2-ETHANEDIOL

See GLYCOLS

ETHANOL

Adsorption

Separation of alcohol-water mixtures by selective adsorption. Final technical report, 8: 18193 (R:US)

Binding Energy

Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Biosynthesis

Characterization of saccharomyces strains with respect to their ability to grow and ferment in the presence of ethanol and sucrose, 8: 17505 (RA:US)

Clostridium thermocellum as an ethanol producer: its characteristics and current and future research (MIT Process), 8: 17508 (RA:US)

Genetic engineering for fuels and chemicals: a proline-overproducing plasmid which confers osmotic tolerance to fermentations, 8: 17506 (RA:US)

Chemical Reactions

Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Production

Chemical feedstocks from hardwood by organosolv hydrolysis: computer-aided process design and economic evaluations, 8: 17512 (RA:US)

Preliminary process engineering evaluation of ethanol production from vegetative crops, 8: 17513 (RA:US)
Radiosensitivity Effects
Influence of agents encountered in normal physiology on the capacity of cells to repair and recover from radiation damage, 8: 18901 (BA:XE)
Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Tolerance
Genetic engineering for fuels and chemicals: a proline-overproducing plasmid which confers osmotic tolerance to fermentations, 8: 17506 (RA:US)
ETHANOL PLANTS
Economic Analysis
Feasibility study for the production of ethyl alcohol and xanthan polymer from barley fermentation. Final report, 8: 17545 (R:US)
Preliminary process engineering evaluation of ethanol production from vegetative crops, 8: 17513 (RA:US)
Economic Impact
Analysis of the economic impacts from ethanol production in three New York State regions. Final report, 8: 17572 (R:US)
Environmental Impacts
Tennol, Inc. - loan-guarantee application: Marion County, Tennessee. Environmental assessment, 8: 17543 (R:US)
Feasibility Studies
Feasibility study for the production of ethyl alcohol and xanthan polymer from barley fermentation. Final report, 8: 17545 (R:US)
Loan Guarantees

Coal Liquefaction Plants
Pilot plant for coal hydrogenation - construction phase, 8: 17010 (R:DE:In German)
Pre-feasibility study for construction of a commercial coal hydrogenation plant, 8: 17009 (R:DE:In German)
Production of liquid hydrocarbons by coal hydrogenation, 8: 17014 (RA:DE)
Energy Conservation
Programme of the administration of the Land of Schleswig-Holstein for careful and economic use of energy (Federal Republic of Germany), 8: 18049 (R:DE:In German)

Energy Policy
Local energy-management process, 8: 17988 (R:US)
Overview of the energy research and development program of the Federal Republic of Germany with special attention to coal utilization technology, 8: 18071 (RA:DE)
Energy Supplies
Germany - France. A comparison of electric power supply systems, 8: 18042 (B:DE:In German)
Nuclear Energy
Germany - France. A comparison of electric power supply systems, 8: 18042 (B:DE:In German)
Radioactive Waste Facilities
Planned collecting site for low- and intermediate-level radioactive waste in Bavaria, 8: 17367 (R:DE:In German)
Radioactive Waste Storage
Planned collecting site for low- and intermediate-level radioactive waste in Bavaria, 8: 17367 (R:DE:In German)
Texaco Gasification Process
Syngas from coal on the basis of the development of Texaco/Ruhrkohle/Ruhrchemie, 8: 17011 (RA:DE)

FEED MATERIALS PLANTS
Dams
NRC inventory of dams, 8: 17904 (R:US)
Environmental Impacts
NRC inventory of dams, 8: 17904 (R:US)
Land Reclamation
Restoration of surface vegetation on uranium wastes at Uravan, Colorado. Report of investigations/1982, 8: 17429 (R:US)

FEMALES
See also WOMEN
Pregnancy
Overview of industries policies and practices on fertile female and ionizing radiation, 8: 17450 (R:US)
Radiation Protection
Overview of industries policies and practices on fertile female and ionizing radiation, 8: 17450 (R:US)

FERMENTATION
Meetings
Biotechnology for the production of chemicals and fuels from biomass, 8: 17504 (R:US)

FERMENTATION ALCOHOL
See ETHANOL

FERMIONS
See also LEPTONS
Composite Models
Composite fermions and Higgs scalars, an explanation for multiple generations, 8: 19101 (R:US)

FERRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Catalytic Effects
Ferrite catalyst (Japanese patent), 8: 17118 (TG:US)

FFTF REACTOR
Fission Product Release
LMFBR technology. FFTF cover-gas leakage calculation, 8: 17910 (R:US)
Primary Coolant Circuits
LMFBR technology. FFTF cover-gas leakage calculation, 8: 17910 (R:US)
Reactor Materials
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)
Seals
LMFBR technology. FFTF cover-gas leakage calculation, 8: 17910 (R:US)

FIBER OPTICS
Alignment
Precision translator, 8: 18422 (P:US)

FIBRINOGEN
Chemical Radiation Effects
Investigation on the radiation damage in biomolecules, 8: 18921 (BA:XE)

FIBROBLASTS
Genetic Radiation Effects
Genetic and biochemical basis of radiation sensitivity in human and other cells in culture, 8: 18892 (BA:XE)
Genetic change and DNA repair mechanisms in the yeast Saccharoymces cerevisiae (1976-1980), 8: 18895 (BA:XE)
Identify and characterize variant strains to mammalian cells deficient in repair of DNA damage, 8: 18893 (BA:XE)

FIELD EMISSION MICROSCOPY
See ION MICROSCOPY

FIELD ION MICROSCOPY
See ION MICROSCOPY

FIELDS (ELECTRIC)
See ELECTRIC FIELDS

FIELDS (MAGNETIC)
See MAGNETIC FIELDS

FILAMENT (PLASMA)
See PLASMA FILAMENT

FILLING STATIONS
See GASOLINE SERVICE STATIONS

FILM CONDENSATION
Heat Transfer
Local heat transfer during condensation with forced convection in a vertical tube, 8: 18451 (R:DE:In German)

FILM FLOW
Laminar viscous film flow with mass and momentum, 8: 18449 (R:DE:In German)

FILMS
Not for PHOTOGRAPHIC FILMS or NUCLEAR EMULSIONS.
See also SUPERCONDUCTING FILMS
Fabrication
Composite polymeric film and method for its use in installing a very-thin polymeric film in a device, 8: 18296 (P:US)

FILTRATION
Mathematical Models
Dynamic modeling and simulation of froth flotation and vacuum-filtratrion units, 8: 17170 (R:US)

FINANCIAL DATA
Validation
Developing validation strategies for the financial-reporting system. Final report, 8: 18062 (R:US)

FINGERPRINTING (OIL SPILLS)
See OIL SPILLS

FIRE EXTINGUISHERS
Testing
Automatic fire protection system for mobile underground metal mining equipment. Volume II. Lon term validation testing. Report for 1 Jul 76-Feb 81, 8: 17197 (R:US)

FIRE PREVENTION
Fire suppressing apparatus (Patent), 8: 18391 (P:US)

FIRE STATIONS
See PUBLIC BUILDINGS

FIREDAMP
See METHANE

FIRES
Blast Effects
Experimental extinguishment of fires by blast. Final report, 8: 18574 (R:US)

FISCHER-TROPSCH SYNTHESIS
Catalysts
Fischer-Tropsch synthesis in slurry-reactor systems. Quarterly report, November 1, 1981 to January 31, 1982, 8: 17031 (R:US)
Motor fuels from coal, 8: 17488 (RA:DE)
Slurry Fischer-Tropsch/Mobil two-stage process of converting syngas to high-octane gasoline. Quarterly report, 1 April-30 June 1982 (Synthesis gas to high octane gasoline in two stages with different catalysts), 8: 17490 (R:US)
Mass Transfer
Fischer-Tropsch synthesis in slurry-reactor syatems. Quarterly report, November 1, 1981 to January 31, 1982, 8: 17031 (R:US)
Pilot Plants
Slurry Fischer-Tropsch/Mobil two-stage process of converting syngas to high-octane gasoline. Quarterly report, 1 April-30 June 1982 (Synthesis gas to high octane gasoline in two stages with different catalysts), 8: 17490 (R:US)

Research Programs
Fischer-Tropsch synthesis in slurry-reactor systems. Quarterly report, November 1, 1981 to January 31, 1982, 8: 17031 (R:US)

FISH CULTURE
See FISHERIES

FISH HATCHERIES
See FISHERIES

FISHERIES
Prior to August 1981, this concept was indexed to AQUACULTURE.
Renewable Energy Sources
Alternative energy sources in fisheries and aquaculture; management of tropical fisheries, and aquaranching: ICLARM newsletter, volume 4, numbers 2-4. Report for Apr-Oct 81, 8: 18123 (R:US)

FISHES
See also ANADROMOUS FISHES
A guide for enhancement of fish and wildlife on abandoned mine lands in the eastern United States. Final report, 8: 17125 (R:US)
Entrainment
Impact of a once through cooling system on the yellow perch stock in the western basin of lake erie, 8: 18792 (R:US)
Injuries
Acid precipitation: effects on forest and fish. Final report, 8: 18971 (R:NO)
Population Dynamics
Application of fisheries-management techniques to assessing impacts, 8: 17906 (R:US)
Production
Management of cooling ponds and lakes for fish and wildlife - a guidance manual. Final report, 8: 17778 (R:US)
Tissues
Determination of methylmercury in fish by selective-reduction cold-vapor atomic-absorption spectrophotometry, 8: 18964 (R:US)

FISSION ISOMERS
De-Excitation
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)

FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Lapse of the release of radioactivity on postulated cases of core meltdown reactor accidents at Swedish boiling water reactors. Stage I. Final report, 8: 17963 (R:SE:In Swedish)
Radiation Doses
Importance of deposition for individual and collective doses in connection with routine releases from nuclear power plants, 8: 18699 (R:DK)

FISSION PRODUCTS
Deposition
Importance of deposition for individual and collective doses in connection with routine releases from nuclear power plants, 8: 18699 (R:DK)

FISSION SPECTRA
FISPET: a code for computing fission spectra from ENDF/B, 8: 17895 (R:IT)

FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT

FISSURED FORMATIONS
See FRACTURED RESERVOIRS

FITZPATRICK REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Nine Mile Point and Fitzpatrick case study. Technical report 1 Oct 78-4 Jan 82, 8: 17877 (R:US)

FLAGYL
See METRONIDAZOLE

FLAME PROPAGATION
Flame acceleration mechanisms under conditions of partial confinement. Annual report Feb 81-Jan 82, 8: 18389 (R:US)
One-dimensional time-dependent model for flame initiation, propagation and quenching. Memorandum report, 8: 18384 (R:US)
Computerized Simulation
Contribution to the flat flame olympics: problem B. Final report, 8: 18383 (R:US)
Mathematical Models
Ignition and flame-propagation studies with adaptive numerical grids, 8: 18390 (R:US)

FLAMES
Emission Spectroscopy
Demonstration of the spectral conservation system. Final report, 8: 18185 (R:US)
Mathematical Models
One-dimensional time-dependent model for flame initiation, propagation and quenching. Memorandum report, 8: 18384 (R:US)

FLAT PLATE COLLECTORS
Gaskets
Improved solar-collector sealants. Semiannual report, May 1981-October 1981, 8: 17679 (R:US)
Sealing Materials
Improved solar-collector sealants. Semiannual report, May 1981-October 1981, 8: 17679 (R:US)

FLAWS
See DEFECTS

FLOODS
Risk Assessment
Feasibility for quantitative assessment of available margins inherent in flood protection of nuclear plants. Final report, 8: 18741 (R:US)

FLORIDA
Biomass
Multiresource inventories: techniques for estimating biomass on a statewide basis. Forest service research paper, 8: 17577 (R:US)

FLOTATION
Mathematical Models
Dynamic modeling and simulation of froth flotation and vacuum-filtratrion units, 8: 17170 (R:US)

FLOW (FLUID)
See FLUID FLOW

FLOW (HEAT)
See HEAT FLOW

FLOWMETERS
Calibration of instrumented steam separators to determine quality and flow distribution in an operating steam generator. Final report (PWR), 8: 17823 (R:US)
Calibration
EDS coal-liquefaction process development. Phase V. Quarterly technical progress report, July 1-September 30, 1982, 8: 17020 (R:US)

FLUE GAS
Denitrification
Shell NO/sub x//SO_2 flue gas treatment process: independent evaluation. Final report Feb 80-Feb 82, 8: 18483 (R:US)
Desulfurization
Acid rain mitigation study. Volume II. FGD cost estimates (appendices). Final report Feb 80-Feb 81, 8: 17775 (R:US)
Air pollution emission test. Volume I. first interim report: continuous sulfur dioxide monitoring at steam generators, 8: 18624 (R:US)
Efficiency of buffered aqueous carboxylic acid solutions and organic solvents to absorb SO_2 from industrial flue gas; solubility data from gas-liquid chromatography, 8: 17770 (R:US)
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Flue gas desulfurization costs for large coal-fired boilers (draft), 8: 17116 (R:US)
Forced-oxidation demonstration at the TVA Widows Creek Unit 8 FGD System. Final report Apr 78-Nov 81, 8: 17777 (R:US)
Hitachi zosen nox flue gas treatment process. volume 1. pilot plant evaluation. Final report may 78-feb 82, 8: 17774 (R:US)

Investigations into the further utilisation of the end-products from flue-gas desulphurisation washing processes, 8: 17100 (R:DE:In German)
Lime FGD systems data book: second edition. Final report, 8: 17104 (R:US)
Shell NO/sub x//SO_2 flue gas treatment process: independent evaluation. Final report Feb 80-Feb 82, 8: 18483 (R:US)
Water intake, wastewater production and treatment, and air pollution control technology in coal-fired steam-electric power generating stations, 8: 17120 (B:CA)

Purification
Ferrite catalyst (Japanese patent), 8: 17118 (TG:US)

FLUID FLOW
See also FILM FLOW
GAS FLOW
INCOMPRESSIBLE FLOW
LAMINAR FLOW
SUBSONIC FLOW
TRANSONIC FLOW
TURBULENT FLOW
TWO-PHASE FLOW

Bubbles
Finite element methods with user-controlled meshes for fluid-structure interaction, 8: 18458 (J:NL)

Computer Codes
A general purpose computer program for multidimensional one and two phase flow, 8: 18454 (R:GB)
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes, 8: 17944 (R:GB)

Transients
Finite element methods with user-controlled meshes for fluid-structure interaction, 8: 18458 (J:NL)

FLUIDIZATION

Research Programs
Coal-gasification research studies. Quarterly report, August 20-November 19, 1982, 8: 17029 (R:US)

Test Facilities
Coal-gasification research studies. Quarterly report, August 20-November 19, 1982, 8: 17029 (R:US)

FLUIDIZED-BED COMBUSTION

Evaluation
Modern coal combustion and boiler technology, 8: 17748 (RA:DE)

Feasibility Studies
Fluidized bed combustion of oil shale, 8: 17304 (R:IL:In English and Hebrew)

FLUIDIZED-BED COMBUSTORS

Design
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume I, 8: 17752 (R:US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume II, 8: 17753 (R:US)

Economic Analysis
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume I, 8: 17752 (R:US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume II, 8: 17753 (R:US)

Technology Assessment
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume I, 8: 17752 (R:US)
Pressurized fluidized-bed combined-cycle-concept evaluation. Volume II, 8: 17753 (R:US)

FLUORANTHENE
See CONDENSED AROMATICS

FLUORIDES
See also ANTIMONY FLUORIDES
LITHIUM FLUORIDES
MOLYBDENUM FLUORIDES
NIOBIUM FLUORIDES
TELLURIUM FLUORIDES

Chemical Reactions
Kinetic investigations of the reactions of ufg in the gaseous phase, 8: 18335 (R:DE:In German)

FLUORINATED ALIPHATIC HYDROCARBONS

Chemical Reaction Kinetics
Studies of combustion kinetics and mechanisms. Progress report, January 1, 1982-December 31, 1982, 8: 18386 (R:US)

Mass Spectra
Computer processing of mass-spectral data. Part V. Assignment of formulas to experimental masses. Representative databases for program FZM, 8: 18348 (R:US)

FLUORINE

Atom-Molecule Collisions
Experimental determination of initial vibrational and rotational energy distributions from the reaction of atomic deuterium with molecular fluorine. Final scientific report 1 Jun 80-1 Jul 81, 8: 19052 (R:US)

Chemical Reaction Kinetics
Studies of combustion kinetics and mechanisms. Progress report, January 1, 1982-December 31, 1982, 8: 18386 (R:US)

Chemical Reactions
Kinetic measurements for the reaction of NH_2 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)

FLUORINE 18

Hot Atom Chemistry
Nuclear methods in chemical kinetics. Technical progress report, October 1, 1981-September 30, 1982, 8: 18374 (R:US)

Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

FLUORINE COMPOUNDS
See also FLUORIDES
OXYFLUORIDES

Ion Spectroscopy
X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982, 8: 19063 (R:US)

Ion-Molecule Collisions
X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982, 8: 19063 (R:US)

FLUORINE FLUORIDES
See FLUORINE

FLY ASH

Activation Analysis
An automated multidetector system for instrumental neutron activation analysis of geological and environmental materials, 8: 17097 (BA:US)

Carcinogen Screening
Paramecium tetraurelia pre-screen for hazardous chemicals: a rapid detector system for health hazards. 1977-1983 report, 8: 18962 (R:US)

Chemical Composition
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)

Environmental Impacts
Disposal of fly-ash alkali FGD waste in a western decoaled strip mine. Quarterly technical progress report, June 1-August 31, 1982, 8: 17122 (R:US)

Leaching
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)

Marine Disposal
Stabilized coal waste in the Chesapeake Bay-Choptank River estuary: environmental investigations. Final report, 8: 17127 (R:US)

Mutagen Screening
Paramecium tetraurelia pre-screen for hazardous chemicals: a rapid detector system for health hazards. 1977-1983 report, 8: 18962 (R:US)
Solidification
Stabilized coal waste in the Chesapeake Bay-Choptank River estuary: environmental investigations. Final report, 8: 17127 (R:US)
Toxicity
Paramecium tetraurelia pre-screen for hazardous chemicals: a rapid detector system for health hazards. 1977-1983 report, 8: 18962 (R:US)
Waste Disposal
Disposal of fly-ash alkali FGD waste in a western decoaled strip mine. Quarterly technical progress report, June 1-August 31, 1982, 8: 17122 (R:US)
Vienna fly ash disposal site: problem definition study. Final report, 8: 18755 (R:US)

FLYING SPOT DIGITIZERS
Mechanical flying spot digitizers; see also CATHODE RAY TUBE DIGITIZERS.
Image Processing
Methods and means for diagnostics in the bubble chamber picture measurement system for HPD IHEP, 8: 18526 (R:SU:In Russian)

FLYWHEEL ENERGY STORAGE
Economic Analysis
Fixed-base flywheel storage systems for electric-utility applications: an assessment of economic viability and R and D priorities, 8: 17969 (R:US)
Technology Assessment
Fixed-base flywheel storage systems for electric-utility applications: an assessment of economic viability and R and D priorities, 8: 17969 (R:US)

FLYWHEELS
Composite Materials
Fabrication of high-performance, filament-wound, fiber-composite rings, 8: 17970 (R:US)
Fabrication
Fabrication of high-performance, filament-wound, fiber-composite rings, 8: 17970 (R:US)
Research Programs
Fixed-base flywheel storage systems for electric-utility applications: an assessment of economic viability and R and D priorities, 8: 17969 (R:US)

FOOD

Environmental Effects
Life on a warmer earth: possible climatic consequences of man made global warming, 8: 18702 (R:AT)
Environmental Impacts
Life on a warmer earth: possible climatic consequences of man made global warming, 8: 18702 (R:AT)
Research Programs
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8: 17213 (R:US)

FOSSIL-FUEL POWER PLANTS
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Air Pollution Control
Acid rain: control strategies for coal-fired utility boilers. Volume I, 8: 17103 (R:US)
Water intake, wastewater production and treatment, and air pollution control technology in coal-fired steam-electric power generating stations, 8: 17120 (B:CA)
Boiler Fuels
Long-term, mid-term, and short-term fuel scheduling. Volume 3. Economic dispatch fuel price strategies. Final report, 8: 18107 (R:US)
Circulating Systems
Thermo- and fluiddynamical behaviour of loop systems under pressure relief, 8: 17760 (R:DE:In German)

Decision Making
Research progress in industry functional modeling, 8: 18104 (R:US)
Energy Consumption
Cogeneration as an important way for achieving an energy conservation policy in Romania, 8: 18044 (BA:US)
Environmental Effects
Crop and forest losses due to current and projected emissions from coal-fired power plants in the Ohio River Basin, 8: 18733 (R:US)
Field study to obtain trace element mass balances at Kingston Steam Plant. Final report Mar 77-Jun 81, 8: 18762 (R:US)
Health impacts, emissions, and emission factors for noncriteria pollutants subject to 'de minimis' guidelines and emitted from stationary conventional combustion processes. Special report, 8: 18638 (R:US)
Vienna fly ash disposal site: problem definition study. Final report, 8: 18755 (R:US)
Environmental Impacts
Environmental impact statement: Henry W. Pirkey Power Plant Unit-I/South Hallsville Surface Lignite Mine Project, Harrison County, Texas. Final report (draft), 8: 17776 (R:US)
Ohio River Basin Energy Study: air quality and related impacts. Volume III. Selected impacts of electric utility operations in the Ohio River Basin (1976-2000): an application of the utility simulation model, 8: 17772 (R:US)
Siting field research in the western Kentucky energy development region: an exploration of a regional approach. Environmental Sciences Division, Publication No. 2089, 8: 18607 (R:US)
Flue Gas
Acid rain mitigation study. Volume II. FGD cost estimates (appendices). Final report Feb 80-Feb 81, 8: 17775 (R:US)
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Flue gas desulfurization costs for large coal-fired boilers (draft), 8: 17116 (R:US)
Forced-oxidation demonstration at the TVA Widows Creek Unit 8 FGD System. Final report Apr 78-Nov 81, 8: 17777 (R:US)
Hitachi zosen nox flue gas treatment process. volume 1. pilot plant evaluation. Final report may 78-feb 82, 8: 17774 (R:US)
Lime FGD systems data book: second edition. Final report, 8: 17104 (R:US)
Water intake, wastewater production and treatment, and air pollution control technology in coal-fired steam-electric power generating stations, 8: 17120 (B:CA)
Fluidized-Bed Combustion
Modern coal combustion and boiler technology, 8: 17748 (RA:DE)
Fly Ash
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Fuel Management
Long-term, mid-term, and short-term fuel scheduling. Volume 1. User's guide. Final report, 8: 18105 (R:US)
Long-term, mid-term, and short-term fuel scheduling. Volume 2. Programmer's guide. Final report, 8: 18106 (R:US)
Long-term, mid-term, and short-term fuel scheduling. Volume 3. Economic dispatch fuel price strategies. Final report, 8: 18107 (R:US)
Health Hazards
Impacts on human health from the coal and nuclear fuel cycles and other technologies associated with electric power generation and transmission, 8: 17444 (R:US)
Man-Machine Systems

FUEL ASSEMBLIES
Basic possibility of reducing doubling time by the heterogeneous arrangement of different types of fuel in the fast reactor, 8: 17857 (TG:GB)
Burnup
Data base management project. Annual report, 29 September 1981-29 September 1982 (PWR;BWR), 8: 17888 (R:US)
Extended fuel-burnup demonstration program. Semiannual technical progress report, July 1981-December 1981 (PWR), 8: 17812 (R:US)
Chemical Composition
Combined use of uranium and plutonium in large fast reactors, 8: 17858 (TG:GB)
Couplings
Nuclear reactor fuel assembly duct-tube-to-inlet-nozzle attachment system (Patent), 8: 17900 (P:US)
Critical Heat Flux
Parametric study of CHF data. Volume 2. A generalized subchannel CHF correlation for PWR and BWR fuel assemblies. Final report, 8: 17930 (R:US)
FUEL CANS
Deformation
Analysis of cladding deformation over plenum axial gaps in Zircaloy-clad fuel rods. LWBR Development Program, 8: 17854 (R:US)
FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Economic Analysis
Study of the estimation of likely levels of efficiency and cost attainable in the generation of electric power, based on hydrogen, 8: 17767 (R:US)
Efficiency
Study of the estimation of likely levels of efficiency and cost attainable in the generation of electric power, based on hydrogen, 8: 17767 (R:US)
Fuel Systems
Molten-carbonate fuel-cell-powerplant desulfurization systems. Final report, November 1978-November 1979, 8: 18132 (R:US)
Planning
Project status report No. 4, 8: 18113 (R:US)
FUEL CELLS
See also REGENERATIVE FUEL CELLS
Batteries and fuel cells, 8: 17984 (B:DE:In German)
Field Tests
40 kW fuel cell field test support. Final report Mar 80-May 81, 8: 18133 (R:US)
Research Programs
Central electrochemical Research Institute: annual report 1980-81, 8: 18361 (R:US)
FUEL CONSUMPTION
Forecasting
Review of the UK transport energy outlook: and policy recommendations, 8: 18168 (R:GB)
FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE
FUEL CYCLE
See also PLUTONIUM RECYCLE
THORIUM CYCLE
Combined use of uranium and plutonium in large fast reactors, 8: 17858 (TG:GB)
Data Base Management
Data base management project. Annual report, 29 September 1981-29 September 1982 (PWR;BWR), 8: 17888 (R:US)
Health Hazards
Health risks from the nuclear fuel cycle, 8: 17433 (BA:US)
Impacts on human health from the coal and nuclear fuel cycles and other technologies associated with electric power generation and transmission, 8: 17444 (R:US)
Occupational Safety
Health risks from the nuclear fuel cycle, 8: 17433 (BA:US)
Risk Assessment
Transportation risks in the US nuclear fuel cycle, 8: 17448 (R:US)
FUEL ELEMENT FAILURE
Heat Transfer
Flow regime modeling study for the SIMMER-II LMFBR safety code: clad relocation, 8: 17952 (R:US)
Hydraulics
Flow regime modeling study for the SIMMER-II LMFBR safety code: clad relocation, 8: 17952 (R:US)

NATURAL GAS
Calorific Value
Angrenskaya underground coal gasification station, 8: 17066 (R:US)
Chemical Composition
Angrenskaya underground coal gasification station, 8: 17066 (R:US)
Environmental characterization of the Texaco Coal-Gasification Process at Ruhrkohle/Ruhrchemie in Oberhausen-Holten, Federal Republic of Germany. Final report, 8: 17123 (R:US)
Wood carbonization, 8: 17550 (RA:DE:In German)
Combustion
Peat gasification for diesel generating stations, 8: 17080 (BA:US)
Desulfurization
Molten-carbonate fuel-cell-powerplant desulfurization systems. Final report, November 1978-November 1979, 8: 18132 (R:US)
Production
Regeneratively cooled coal combustor/gasifier with integral dry ash removal, 8: 18480 (P:US)
Synthesis
Peat gasification for diesel generating stations, 8: 17080 (BA:US)
FUEL MANAGEMENT
Optimization
Long-term, mid-term, and short-term fuel scheduling. Volume 1. User's guide. Final report, 8: 18105 (R:US)
Long-term, mid-term, and short-term fuel scheduling. Volume 2. Programmer's guide. Final report, 8: 18106 (R:US)
Long-term, mid-term, and short-term fuel scheduling. Volume 3. Economic dispatch fuel price strategies. Final report, 8: 18107 (R:US)
FUEL OILS
See also HEATING OILS
RESIDUAL FUELS
Combustion Products
Environmental assessment of a low-emission oil-fired residential hot water condensing heating system. volume i: technical results. Final report Jul 80-Feb 81, 8: 18647 (R:US)
Environmental assessment of a low-emission oil-fired residential hot water condensing heating system. Volume II: data supplement. Final report Jul 80-Feb 81, 8: 18648 (R:US)
Prices
State energy price system. Volume I. Overview and technical documentation, 8: 17221 (R:US)
State energy price system. Volume II. Data base development, 8: 17222 (R:US)
FUEL PELLETS
Inspection
Pellet inspection apparatus (Patent), 8: 17328 (P:US)
FUEL REPROCESSING PLANTS
See also BARNWELL FUEL PROCESSING PLANT
IDAHO CHEMICAL PROCESSING PLANT
Environmental Effects
Marine distribution and behaviour of transuranic and fission product radionuclides, 8: 18778 (BA:XE)
Safeguards
Diversion-resistant nuclear-fuels processing. Progress report, 1980-1981, 8: 17331 (R:US)

FUEL RODS
Nuclear reactor fuel element having improved heat transfer (Patent), 8: 17901 (P:US)
Burnup
BR-3 high burnup fuel rod hot cell program. Volume 2. Data summary (PWR), 8: 17815 (R:US)
BR-3 high burnup fuel rod hot cell program. Volume 1 (PWR), 8: 17814 (R:US)
High burnup PWR ramp test program. Third semi-annual progress report, October 1, 1981-March 31, 1982, 8: 17813 (R:US)
Fission Product Release
BR-3 high burnup fuel rod hot cell program. Volume 2. Data summary (PWR), 8: 17815 (R:US)
Heat Transfer
Application of analytical capability to predict rapid cladding cooling and quench during the blowdown phase of a large break loss-of-coolant accident (PWR), 8: 17922 (R:US)
Performance Testing
BR-3 high burnup fuel rod hot cell program. Volume 2. Data summary (PWR), 8: 17815 (R:US)
BR-3 high burnup fuel rod hot cell program. Volume 1 (PWR), 8: 17814 (R:US)
Temperature Gradients
Application of analytical capability to predict rapid cladding cooling and quench during the blowdown phase of a large break loss-of-coolant accident (PWR), 8: 17922 (R:US)
Transients
High burnup PWR ramp test program. Third semi-annual progress report, October 1, 1981-March 31, 1982, 8: 17813 (R:US)
FUEL SHEATHS

G

GADOLINIUM 151
Beta-Plus Decay
Study on the $^{151}Gd \rightarrow {}^{151}Eu$ decay, 8: 19179 (R:XJ:In Russian)
GADOLINIUM SULFIDES
Chemical Preparation
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Chemical Reactions
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)

GAGES (STRAIN)
See STRAIN GAGES
GALILEI TRANSFORMATIONS
Lie Groups
Addendum to: on a possible Lie-admissible covering of the Galilei relativity in Newtonian mechanics for nonconservative and Galilei form-noninvariant systems, 8: 19283 (J:US)
Possible Lie-admissible covering of the Galilei relativity in Newtonian mechanics for nonconservative and Galilei form-noninvariant systems, 8: 19269 (J:US)
GALLIUM ARSENIDE SOLAR CELLS
Electric Currents
Nonlinear response of GaAs concentrator cells to solar insolation, 8: 17596 (BA:US)
Fabrication
GAAS shallow-homojunction solar cells. Final report, 8: 17566 (R:US)
Thin-film GaAs solar cells, 8: 17614 (BA:US)
Nonlinear Problems
Nonlinear response of GaAs concentrator cells to solar insolation, 8: 17596 (BA:US)
Optical Filters
High concentration in gaas photovoltaic systems, 8: 17542 (R:IT:In Italian)
GALLIUM ARSENIDES
Ion Implantation
Controlled atmosphere annealing of ion implanted gallium arsenide. Final report 1 Jul 76-30 Nov 79, 8: 18298 (R:US)
GALLIUM IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s^{2}3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
Ion Channeling
Ion-channelling effects in scanning ion microscopy with a Ga^+ probe, 8: 19218 (RA:US)
GALLIUM PHOSPHIDES
Excitons
Time-resolved far-infrared spectroscopy of excitons. Progress report, February 1982-January 1983, 8: 18299 (R:US)
Infrared Spectra
Time-resolved far-infrared spectroscopy of excitons. Progress report, February 1982-January 1983, 8: 18299 (R:US)
GAMMA ASTRONOMY
For photon energies above 100 KeV.
Gamma ray astronomy in perspective, 8: 19030 (R:US)
Planning
Prospects for gamma ray astronomy, 8: 19031 (R:US)
Technology Assessment
Gamma ray astrophysics: new insight into the universe, 8: 19032 (R:US)
GAMMA CAMERAS
See also POSITRON CAMERAS
Design
Low-energy particle coordinate detector on the base condensated krypton, 8: 18534 (R:SU:In Russian)
GAMMA DETECTION
Drift Chambers
Drift chamber with an built-in converter used to measure γ-ray angles in electron and positron channeling, 8: 18536 (R:SU:In Russian)
Ge Semiconductor Detectors
Semiconductor detector operation, 8: 18528 (RA:CS:In Czech)
GAMMA DOSIMETRY
Dose Equivalents
Development of a rationalized approach to the measurement of external beta and gamma radiation for radiation protection purposes, 8: 19256 (BA:XE)
Dosemeters
Tactical gamma and fast neutron dosimetry with leuko dye optical waveguides. Conference paper, 8: 18520 (R:US)
GAMMA RADIATION
Dosimetry
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Energy Spectra
Precision gamma- and x-ray energies. Final report, 8: 19244 (R:US)
Microdosimetry
Biological effects of incorporated isotopes and radiation of high ionization density, 8: 18873 (BA:XE)
RBE
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
Radiation-induced chromosome aberrations, 8: 18897 (BA:XE)
GAMMA SPECTROMETERS
Noise
Suppression of heavy-current grid interference with spectrometer operation, 8: 18531 (RA:CS:In Czech)
GAMMA SPECTROSCOPY
Lectures
Optimization of electronic pathway for gamma spectrometry. IAA 82, 8: 18533 (R:CS:CZ)
GARRETT PROCESS

Computer Calculations
New numerical method for the transient gas-dynamic code EVENT, 8: 19071 (R:US)
Control Systems
Mark III detector gas-system schematic (Engineering Materials), 8: 18550 (E:US)
Flow Models
Modeling of Devonian shale-gas reservoirs (conduct reservoir modeling for the Devonian shales). Final report, 8: 17269 (R:US)
Transients
New numerical method for the transient gas-dynamic code EVENT, 8: 19071 (R:US)
GAS FURNACES
Field Tests
Pulse combustion gas-fired furnaces, January 1980-May 1980, field test. Final report, 8: 18162 (R:US)

Forced Convection
Theoretical and experimental investigations of the problem of convective heat transfer in gas heated shock heating installations, 8: 18476 (R:DE:In German)
Gas Burners
Performance modeling of advanced gas burner systems. Annual report may 81-jun 82, 8: 18479 (R:US)
Materials Testing
Study of materials to resist corrosion in condensing gas-fired furnaces. Final report Oct 79-Dec 81, 8: 18477 (R:US)
Pulse Combustion
Pulse combustion gas-fired furnaces, January 1980-May 1980, field test. Final report, 8: 18162 (R:US)
GAS HYDRATES
Energy Source Development
Gas hydrates: a possible energy source (USSR), 8: 17257 (BA:US)
GAS LASERS
See also CARBON DIOXIDE LASERS
Design
Axial flow laser cavity (Patent application), 8: 18447 (P:US)
Excitation
Excitation of mercuric bromide by electrons. Final report 15 May 81-30 Jun 82, 8: 18434 (R:US)
Far Infrared Radiation
Investigation of D_2O laser emission at 50, 66, 83, 111, and 116 microns, 8: 18436 (R:DE)
Performance
Investigation of D_2O laser emission at 50, 66, 83, 111, and 116 microns, 8: 18436 (R:DE)
Laser journal (selected articles), 8: 18427 (R:US)
Power Supplies
Laser journal (selected articles), 8: 18427 (R:US)
Research Programs
A new midinfrared laser in hydrogen. Conference paper, 8: 18429 (R:US)
Shutters
Pressure wave charged repetitively pulsed gas laser (Patent), 8: 18443 (P:US)
GAS OILS
Boiling point range 204-593°C.
Sulfur Content
Certification of four gas oils for sulphur content (BCR reference materials nos. 104, 105, 106 and 107), 8: 17250 (B:DE)
GAS SPILLS
Computerized Simulation
Simulations and studies of heavy-gas dispersion using the SLAB model, 8: 17278 (R:US)
Field Tests
Analysis of turbulent wind-velocity and gas-concentration fluctuations during the Burro series 40-m^3 LNG spill experiments, 8: 17277 (R:US)
Plumes
Dispersal of LNG vapor clouds with water spray curtains. Annual report on phase 1 (final) Dec 80-Dec 81, 8: 17276 (R:US)
Spatial Distribution
Simulations and studies of heavy-gas dispersion using the SLAB model, 8: 17278 (R:US)
GAS STATIONS
See GASOLINE SERVICE STATIONS
GAS TURBINE ENGINES
Combustors
Mechanisms of smoke reduction in the high pressure combustion of emulsified fuels. Volume 1. Construction of apparatus and preliminary experiments, 8: 18382 (R:US)
Exhaust Gases
Determination of effects of ambient conditions on aircraft engine emissions: ALF 502 combustor rig testing and engine verification test. Final report Mar 76-Jan 77, 8: 18645 (R:US)
Fuel Consumption
Ceramic gas turbine engine demonstration program. Final report 2 Jan 76-31 May 81, 8: 18214 (R:US)
Materials
Ceramic gas turbine engine demonstration program. Final report 2 Jan 76-31 May 81, 8: 18214 (R:US)
Performance Testing
Determination of effects of ambient conditions on aircraft engine emissions: ALF 502 combustor rig testing and engine verification test. Final report Mar 76-Jan 77, 8: 18645 (R:US)
GAS TURBINE POWER PLANTS
Steam Injection
Assessment of steam-injected gas turbine systems and their potential application, 8: 17759 (R:US)
GAS TURBINES
Combustors
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8: 17750 (R:US)
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Design
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17755 (R:US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17756 (R:US)
Performance
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17756 (R:US)
Protective Coatings
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines. final report, 8: 17758 (R:US)
Reliability
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17755 (R:US)
High-reliability gas-turbine combined-cycle development program: Phase II. Final report, 8: 17756 (R:US)
Turbine Blades
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)
GAS WELLS

Physical properties of reservoir fluids. Final report 1 Feb 80-31 Aug 81, 8: 17260 (R:US)
Geophysical Surveys
Physical properties of reservoir fluids. Final report 1 Feb 80-31 Aug 81, 8: 17260 (R:US)
Resource Potential
Gas in subsurface waters, 8: 17267 (BA:US)
Seismic Surveys
Microseismic monitoring of Chocolate Bayou Texas: the Pleasant Bayou No. 2 geopressured/geothermal energy test-well program. 1981 annual progress report, 8: 17700 (R:US)

GEORGIA
Electric Utilities
Public Utility Commission manual for Section 210 of PURPA for Georgia, 8: 18087 (R:US)

GEOTHERMAL AREAS
See GEOTHERMAL FIELDS

GEOTHERMAL DISTRICT HEATING
Industrial food processing and space heating with geothermal heat. Final report, February 16, 1979-August 31, 1982, 8: 17715 (R:US)

GEOTHERMAL ENERGY
Environmental Impacts
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Risk Assessment
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Uses
Geothermal resource development for direct heat applications: the impact of regulation. Final report, 8: 17723 (R:US)

GEOTHERMAL ENERGY CONVERSION
Cost Benefit Analysis
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California, 8: 17705 (R:US)
Health Hazards
Health and safety impacts of renewable, geothermal, and rusion energy, 8: 18808 (BA:US)
Occupational Safety
Health and safety impacts of renewable, geothermal, and rusion energy, 8: 18808 (BA:US)

GEOTHERMAL FIELDS
See also CERRO PRIETO GEOTHERMAL FIELD
GEYSERS GEOTHERMAL FIELD
Fluid Injection
Hydrothermal injection experiments at the Raft River KGRA, Idaho, 8: 17706 (R:US)

GEOTHERMAL FLUIDS
Corrosive Effects
Study on scale formation and suppression in heat-exchange systems for simulated geothermal brines. Final report, January 12, 1976-March 5, 1978, 8: 17716 (R:US)
Degassing
Multi-stage flash degaser (Patent), 8: 17714 (P:US)
Geochemistry
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)
Materials Recovery
Recovery of metals from geothermal brine, 8: 17713 (P:US)
Sampling
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)

GEOTHERMAL HEATING SYSTEMS
Design
GEEF: a geothermal engineering and economic feasibility model. Description and user's manual, 8: 17721 (R:US)
Economic Analysis
GEEF: a geothermal engineering and economic feasibility model. Description and user's manual, 8: 17721 (R:US)
Mathematical Models
GEEF: a geothermal engineering and economic feasibility model. Description and user's manual, 8: 17721 (R:US)

GEOTHERMAL POWER PLANTS
Environmental Impacts
Summary and results of the comprehensive environmental monitoring program at the INEL's Raft River geothermal site, 8: 17708 (R:US)
Planning
Project status report No. 4, 8: 18113 (R:US)

GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS

GEOTHERMAL RESOURCES
Bibliographies
Bibliography of geothermal reports in Colorado, 8: 17690 (R:US)
Regulations
Geothermal resource development for direct heat applications: the impact of regulation. Final report, 8: 17723 (R:US)
Resource Development
Geothermal resource development for direct heat applications: the impact of regulation. Final report, 8: 17723 (R:US)
GEOTHERMAL SPRINGS
See THERMAL SPRINGS
GEOTHERMAL SYSTEMS
Fluid Flow
Proximity functions for modeling fluids and heat flow in reservoirs with stochastic fracture distributions, 8: 17692 (R:US)
Heat Flow
Proximity functions for modeling fluids and heat flow in reservoirs with stochastic fracture distributions, 8: 17692 (R:US)
GEOTHERMAL WELLS
Lost Circulation
Industrial food processing and space heating with geothermal heat. Final report, February 16, 1979-August 31, 1982, 8: 17715 (R:US)
Samplers
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)
Well Completion
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Well Drilling
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Static slot testing of conventional lost circulation materials, 8: 17719 (R:US)
Well Temperature
Industrial food processing and space heating with geothermal heat. Final report, February 16, 1979-August 31, 1982, 8: 17715 (R:US)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMAN FR ORGANIZATIONS
Research Programs
Scientific report 1981, 8: 19133 (R:DE)
GERMANIUM
Charged-Particle Transport
Transition effects in the transmission of up to 20 keV electrons through laminated structures, 8: 19237 (RA:SU:In Russian)
Excitons
Photo-excited states in germanium at liquid-helium temperatures, 8: 19260 (R:US)
Fermi Gas
Photo-excited states in germanium at liquid-helium temperatures, 8: 19260 (R:US)
Photon Collisions
Photo-excited states in germanium at liquid-helium temperatures, 8: 19260 (R:US)
GERMANIUM 76
Beta-Minus Decay
Early results from the Battelle-Carolina ^{76}Ge double-beta-decay project, 8: 19166 (R:US)
GERMANIUM DETECTORS
See GE SEMICONDUCTOR DETECTORS
GERMANIUM IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s²3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GETTERS
Materials used for the purification of vacuum atmospheres; see also the specific materials.
Combination moisture and hydrogen getter, 8: 18416 (P:US)
Reduction of recycling by pumping at the PDX limiter, 8: 19339 (R:US)
GEYSERS GEOTHERMAL FIELD
Air Flow
SHALO: a simple theoretical description of drainage flow, 8: 17709 (R:US)
Air Pollution Abatement
Mitigation of hydrogen sulfide emissions in The Geysers KGRA, 8: 17711 (R:US)
Drainage
SHALO: a simple theoretical description of drainage flow, 8: 17709 (R:US)
Environmental Impacts
Cumulative biological impacts of The Geysers geothermal development, 8: 17712 (R:US)
GLASS
Fracture Properties
Behavior of cracks in shock-cooled glass cylinders, 8: 18304 (TJ:US)
Leaching
Glass leaching, 8: 17402 (R:US)
Sealing Materials
Glass ceramic-to-metal seals, 8: 18287 (P:US)
Thermal Shock
Behavior of cracks in shock-cooled glass cylinders, 8: 18304 (TJ:US)
GLOSSARIES
See DICTIONARIES
GLUCAGON
Radioimmunoassay
Radioimmunoassay of pancreatic glucagon. Improvement of method and application in order to determine the role of glucagon in the polytrauma, 8: 18834 (R:DE:In German)
GLUCOSE
Fermentation
Preliminary process engineering evaluation of ethanol production from vegetative crops, 8: 17513 (RA:US)
Metabolism
Evidence for a caudate role in aphasia from FDG positron emission tomography, 8: 18828 (R:US)
Radiosensitivity Effects
Influence of agents encountered in normal physiology on the capacity of cells to repair and recover from radiation damage, 8: 18901 (BA:XE)
GLUONS
Bound State
Prediction of low-lying oddballs in lattice QCD, 8: 19100 (R:DE)
GLUTAMIC ACID
Tissue Distribution
Neurotransmitter mechanisms in the nucleus accumbens septi and related regions in the rat brain, 8: 18845 (R:NO)
GLUTATHIONE
Radiosensitivity Effects
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
GLYCINE HISPIDA
Radionuclide Kinetics
Translocation of radionuclides absorbed by the roots (redistribution) and subsequent release from leaves into the atmosphere (biological resuspension), 8: 18879 (BA:XE)
Temperature Effects
Environmental stress-mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 8: 18955 (R:US)
GLYCOLS
Complexometry
Kinetics of complexation and oxidation of ethanolamine and diols by silver(II), 8: 18352 (J:US)
Oxidation
Kinetics of complexation and oxidation of ethanolamine and diols by silver(II), 8: 18352 (J:US)
GOLD
Charged-Particle Transport
Effective charge of energetic ions in metals, 8: 19223 (RA:US)
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)

Stopping power of Ni, Ag, Au and Pb for ~ 7 MeV/n α-particles and carbon ions (Z_1^3 proportional deviation from the Bethe formula), 8: 19212 (RA:US)

Gas Production Rates

Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)

Ion Collisions

Charge state distribution of light ions at glancing collision with solid surface, 8: 19057 (RA:US)

GOLD 197 TARGET

Neutron Reactions

Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)

GONADOTROPINS

Radiosensitivity Effects

Radiation sensitivity of the human ovary, 8: 18899 (BA:XE)

GRAFT-HOST REACTION

Pathology

Protection against the pathological effects of high doses of irradiation by marrow grafting; immunological and pathological studies of the graft-versus-host reaction provoked by incompatibility for minor antigens, 8: 18910 (BA:XE)

GRAIN ALCOHOL

See ETHANOL

GRANITES

Compression Strength

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Mechanical Properties

Mechanical and transport properties of rocks at high temperatures and pressures. Task I: the physical nature of fracturing at depth; Task II: fracture permeability of crystalline rocks as a function of temperature, pressure, and hydrothermal alteration; Task III: mechanical properties of rocks at high temperatures and pressures. Progress report, 8: 19014 (R:US)

Permeability

Mechanical and transport properties of rocks at high temperatures and pressures. Task I: the physical nature of fracturing at depth; Task II: fracture permeability of crystalline rocks as a function of temperature, pressure, and hydrothermal alteration; Task III: mechanical properties of rocks at high temperatures and pressures. Progress report, 8: 19014 (R:US)

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Poisson Ratio

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Porosity

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Temperature Effects

Thermal calculations for the design, construction, operation, and evaluation of the Spent Fuel Test - Climax, Nevada Test Site, 8: 17342 (R:US)

Temperature Gradients

Scoping calculations for Canadian Underground Research Laboratory (URL), 8: 17417 (R:US)

Tensile Properties

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Thermal Stresses

Scoping calculations for Canadian Underground Research Laboratory (URL), 8: 17417 (R:US)

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Young Modulus

Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

GRANULOCYTES

See LEUKOCYTES

GRAPHITE

Atom Collisions

Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)

GRAPHITE MODERATOR

See GRAPHITE

GRASS

Enzymatic Hydrolysis

Preliminary process engineering evaluation of ethanol production from vegetative crops, 8: 17513 (RA:US)

GRATINGS

Fabrication

Instrument and method for focusing x rays, gamma rays, and neutrons, 8: 18557 (P:US)

GRAVITATIONAL WAVE DETECTORS

Design

The suspension system of the cryogenic gravitational antenna of the Istituto Plasma Spazio, 8: 19029 (R:IT:In Italian)

GRAVITY WAVES

Mathematical Models

Water waves produced by ground motions, 8: 19273 (R:FR)

GRAY

See RADIATION DOSE UNITS

GREAT BRITAIN

See UNITED KINGDOM

GREAT LAKES

See also LAKE ERIE
LAKE MICHIGAN

Harbors

Coal traffic analysis to accompany Great Lakes harbors study, 8: 17169 (R:US)

Iron ore traffic analysis to accompany Great Lakes harbors study, 8: 18167 (R:US)

Regulations

Hazardous waste management in the great lakes region: opportunities for economic development and resource recovery, 8: 18674 (R:US)

GREAT LAKES REGION

GREAT PLAINS

Wind

Small wind power in the southwestern United States, 8: 17734 (R:US)

GREECE

Bays

Phytoplankton ecology of the Saronicos Gulf, Aegean Sea. Data report - Year 1980. Part 1. Hydrography, 8: 18739 (R:GR)

GREENHOUSE EFFECT

Mathematical Models

Geochemical and geophysical models of the fossil-fuel CO_2 climate problem. Annual progress report, September 1981-October 1982, 8: 17121 (R:US)

GREENLAND

Radiometric Surveys

Geostatistical study of the uranium deposit at Kvanefjeld, the Ilimaussaq intrusion, South Greenland, 8: 17312 (R:DK)

Uranium Deposits

Geostatistical study of the uranium deposit at Kvanefjeld, the Ilimaussaq intrusion, South Greenland, 8: 17312 (R:DK)

GRIDS

Cooling

Convectively cooled electrical grid structure (Patent), 8: 18472 (P:US)

Design

Convectively cooled electrical grid structure (Patent), 8: 18472 (P:US)

Electrical Equipment

Convectively cooled electrical grid structure (Patent), 8: 18472 (P:US)

GRINDING MACHINES
Design
Automatic grinding apparatus to control uniform specimen thicknesses (Patent), 8: 18414 (P:US)
GROUND COVER
Mapping
Image analysis for facility siting: a comparison of low- and high-altitude image interpretability for land use/land cover mapping, 8: 18731 (R:US)
GROUND SUBSIDENCE
Monitoring
Characterization of subsidence over multiple-lift longwall panels. Final technical report, 8: 17147 (R:US)
GROUND WATER
Chemical Analysis
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
Corrosive Effects
Enviromechanical testing of Ti-grade 2 and Ti-grade 12 in basalt ground water, 8: 18267 (R:US)
Fluid Flow
Techniques of groundwater investigation at proposed low-level nuclear waste disposal sites, 8: 17383 (RA:US)
Geophysical Surveys
Geophysical detection of groundwater. Final technical report Sep 80-Apr 82, 8: 18737 (R:US)
Isotope Ratio
Chemical transport beneath a uranium mill tailings pile, Riverton, Wyoming, 8: 17426 (R:US)
Monitoring
Ground-water monitoring programs at the Hanford Site, Washington state, 8: 17321 (R:US)
Ground water monitoring techniques for low-level radioactive disposal sites, 8: 17384 (RA:US)
Radioactivity
Ground-water monitoring programs at the Hanford Site, Washington state, 8: 17321 (R:US)
Radiometric Surveys
^{228}Ra, ^{226}Ra and ^{223}Ra in South Carolina ground water: measurement techniques and isotope relationships, 8: 17315 (R:US)
Radionuclide Migration
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Ground-water monitoring programs at the Hanford Site, Washington state, 8: 17321 (R:US)
Investigation of Great Basin big sagebrush and black greasewood as biogeochemical indicators of uranium mineralization. Final report. National Uranium Resource Evaluation, 8: 19021 (R:US)
Lessons learned in a hydrogeological case at Sheffield, Illinois, 8: 17385 (RA:US)
Need for geological characterization of low-level nuclear waste disposal sites, 8: 17375 (RA:US)
Sampling
Ground water monitoring techniques for low-level radioactive disposal sites, 8: 17384 (RA:US)
Water Pollution
Disposal of fly-ash alkali FGD waste in a western decoaled strip mine. Quarterly technical progress report, June 1-August 31, 1982, 8: 17122 (R:US)
Water Pollution Control
Protection of ground water resources from the effects of accidental spills of hydrocarbons and other hazardous substances (guidance document). Technical report, 8: 18751 (R:US)
Water Quality
Ground water monitoring techniques for low-level radioactive disposal sites, 8: 17384 (RA:US)
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
GROUND-WATER RESERVES
See AQUIFERS
GROUP CONSTANTS
Computer Codes
GRUKON software package. Part 1. Data processing code, 8: 19227 (R:SU:In Russian)
GROWTH (BUBBLE)
See BUBBLE GROWTH
GROWTH (ECONOMIC)
See ECONOMIC GROWTH
GUAYULE
Commercialization
A sociotechnical survey of guayule rubber commercialization: a state-of-the-arts report, 8: 17576 (R:US)
GULF COAST
Salt Deposits
Investigation of the utility of Gulf Coast salt domes for the storage or disposal of radioactive wastes, 8: 17361 (R:US)
GULF OF MEXICO
Offshore Platforms
Ecology of petroleum platforms in the northwestern Gulf of Mexico: a community profile, 8: 17236 (R:US)
Oil Spills
The IXTOC I oil spill: the Federal Scientific Response. Special report, 8: 18758 (R:US)
Optical Properties
Ocean optical data from potential OTEC sites in the Gulf of Mexico. Technical memo, 8: 17648 (R:US)

H

HAAG-ARAKI FIELD THEORY
See ALGEBRAIC FIELD THEORY
HADRON REACTIONS
Capture
Data analysis on hadron absorption cross section by nuclei at 5-400 GeV, 8: 19086 (R:SU:In Russian)
HADRONS
Lie Groups
Closed systems with nonconservative internal forces, 8: 19277 (J:US)
Particle Models
Closed systems with nonconservative internal forces, 8: 19277 (J:US)
Need of subjecting to an experimental verification the validity within a hadron of Einstein's special relativity and Pauli's exclusion principle, 8: 19116 (J:US)
Particle Production
Toponium at hadronic colliders, 8: 19106 (R:FR)
Total and inclusive hadron production by e^+e^- annihilation at $\sqrt{S} = 5.2$, 6.5 and 29.0 GeV, 8: 19094 (R:US)
Pauli Principle
Need of subjecting to an experimental verification the validity within a hadron of Einstein's special relativity and Pauli's exclusion principle, 8: 19116 (J:US)
HALIDES
See also FLUORIDES
IODIDES
Chemical Reactions
Kinetic investigations of the reactions of ufg in the gaseous phase, 8: 18335 (R:DE:In German)
HALL GENERATORS
See MHD GENERATORS
HALOGENATED ALIPHATIC HYDROCARBONS
See also BROMINATED ALIPHATIC HYDROCARBONS
CHLORINATED ALIPHATIC HYDROCARBONS
FLUORINATED ALIPHATIC HYDROCARBONS
Solvent Extraction
Process for removing halogenated aliphatic and aromatic compounds from petroleum products (Polychlorinated biphenyls; methylene chloride; perchloroethylene; trichlorofluoroethane; trichloroethylene; chlorobenzene), 8: 18329 (P:US)
HALOGENATED AROMATIC HYDROCARBONS
See also CHLORINATED AROMATIC HYDROCARBONS

Solvent Extraction
Process for removing halogenated aliphatic and aromatic compounds from petroleum products (Polychlorinated biphenyls; methylene chloride; perchloroethylene; trichlorofluoroethane; trichloroethylene; chlorobenzene), 8: 18329 (P:US)

HAMILTON-JACOBI EQUATIONS
Lie Groups
Lie and Lie-admissible symmetries of dynamical systems, 8: 19278 (J:US)

HANDLING (DATA)
See DATA PROCESSING

HANFORD RESERVATION
Radiation Monitoring
Master schedule for CY-1983 Hanford environmental surveillance routine sampling program, 8: 18697 (R:US)
Radioactive Waste Disposal
Analyses of the disposal of alpha-contaminated waste at Hanford, 8: 17441 (RA:US)
Radioactivity
Ground-water monitoring programs at the Hanford Site, Washington state, 8: 17321 (R:US)
Master schedule for CY-1983 Hanford environmental surveillance routine sampling program, 8: 18697 (R:US)

HARD COAL
See BLACK COAL

HAWAII
Insolation
Project Ahupua'a: solar meteorological field measurements on the Island of Hawaii, Summer 1978. 5. Southern flank of Mauna Loa, 8: 17746 (R:US)
Resistivity Surveys
Geophysical reconnaissance of prospective geothermal areas on the Island of Hawaii using electrical methods, 8: 17703 (R:US)
Wind
Project Ahupua'a: solar meteorological field measurements on the Island of Hawaii, Summer 1978. 5. Southern flank of Mauna Loa, 8: 17746 (R:US)

HAZARDOUS MATERIALS
Not for radioactive materials.
Emergency Plans
Fire defense and emergency response planning resource directory. Final report, 8: 19002 (R:US)
Mathematical Models
Hazardous waste management in the great lakes region: opportunities for economic development and resource recovery, 8: 18674 (R:US)
Mutagenesis
Human epithellial cell activation systems. Final report, 8: 18984 (R:US)
Waste Disposal
Emerging technologies for the control of hazardous wastes. Final report, 8: 18734 (R:US)

HAZARDOUS MATERIALS SPILLS
Water Pollution Control
Protection of ground water resources from the effects of accidental spills of hydrocarbons and other hazardous substances (guidance document). Technical report, 8: 18751 (R:US)

HCDA
See REACTOR CORE DISRUPTION

H-COAL PROCESS
Chemical Reactors
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Flowsheets
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Material Balance
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Materials Testing
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Oil Yields
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Organic Solvents
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Pilot Plants
H-COAL Pilot Plant status (Runs 6, 7 and 8), 8: 17040 (RA:US)
Residues
Type III extended pilot-plant evaluation of molten H-Coal liquefaction residue. Gasification of residual-materials from coal liquefaction, 8: 17021 (R:US)

HD 8077
See NICKEL BASE ALLOYS

HDO
See DEUTERIUM COMPOUNDS
HEAVY WATER

HEAD END PROCESSES
Criticality
Criticality problems in the HEAD-END of reprocessing of HTGR fuel elements, 8: 17332 (R:DE:In German)

HEADING MACHINES
Performance Testing
Influence of the geological structure on the performance of full-face tunnelling machines in mining, 8: 18395 (R:DE:In German)

HEALTH HAZARDS
Risk Assessment
Health and safety impacts of renewable, geothermal, and rusion energy, 8: 18808 (BA:US)
Health risks of energy technologies, 8: 18807 (B:US)
Health risks from the nuclear fuel cycle, 8: 17433 (BA:US)

HEAT TRANSFER
THERMAL EFFLUENTS

HEAT DISTRIBUTION SYSTEMS
Pipelines
Pipe heat transfer calculation. Software, 8: 18410 (R:US)

HEAT EXCHANGERS
Energy Efficiency
Energy conservation via heat-transfer enhancement. Final report, 8: 18192 (R:US)
Process design and control strategies for energy efficiency in the process industries. Progress report, April 1, 1980-December 31, 1982, 8: 18191 (R:US)
Scale Control
Study on scale formation and suppression in heat-exchange systems for simulated geothermal brines. Final report, January 12, 1976-March 5, 1978, 8: 17716 (R:US)
Scaling
Study on scale formation and suppression in heat-exchange systems for simulated geothermal brines. Final report, January 12, 1976-March 5, 1978, 8: 17716 (R:US)
Technology Assessment
Energy conservation via heat-transfer enhancement. Final report, 8: 18192 (R:US)

HEAT FLOW
Computer Codes
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions, 8: 17688 (R:US)

HEAT GAIN
Control
Windows for accepting or rejecting solar-heat gain. Final report, 8: 17667 (R:US)

HEAT PUMPS
See also CHEMICAL HEAT PUMPS
SOLAR-ASSISTED HEAT PUMPS
WATER SOURCE HEAT PUMPS

Heat Recovery
Evaluating the heat pump alternative for heating enclosed wastewater treatment facilities in cold regions. Special report, 8: 18473 (R:US)
Uses
Air circuit with heat pump, 8: 18200 (TG:US)

HEAT RECOVERY EQUIPMENT
Performance
Investigation of the coupled heat and mass transfer in absorption regenerators, 8: 18195 (R:DE:In German)

HEAT RESISTING ALLOYS
See also STAINLESS STEEL-304
STAINLESS STEEL-316
Aging
Aging response of a welded iron-based superalloy (JBK-75 (Fe-28 Ni-15 Cr-2 Ti-1 Mo)), 8: 18258 (R:US)
Dip Coating
Dip process thermal-barrier coatings for superalloys. Final report 1 Jul 79-30 Jun 80, 8: 18241 (R:US)
Thermal Insulation
Dip process thermal-barrier coatings for superalloys. Final report 1 Jul 79-30 Jun 80, 8: 18241 (R:US)
Work Functions
Effective work function determination of selected superalloys, 8: 18251 (R:US)

NEON 22 REACTIONS
OXYGEN 16 REACTIONS
OXYGEN 18 REACTIONS
SILICON 28 REACTIONS
SULFUR 32 REACTIONS
Fragmentation
Nuclear chemistry progress report, September 1, 1981-August 31, 1982, 8: 19182 (R:US)
Fusion Reactions
Fusion measurements in light- and medium-mass heavy-ion reactions. Progress report, June 1, 1982-May 31, 1983, 8: 19147 (R:US)
Nuclear Reaction Kinetics
Nonrelativistic microscopic model of fast (E> or approximately 100 MeV/nucleon) atomic nucleus collisions, 8: 19200 (RA:SU:In Russian)
Pions
Spectator-velocity pions from heavy ions, 8: 19159 (R:US)

HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.
Energy Losses
Fundamental dosimetric studies with slow heavy charged particles, 8: 19252 (BA:XE)
Stopping Power
Tabulation of heavy-ion stopping powers for gas detectors, 8: 18527 (R:IT)

HEAVY NUCLEI
For nuclei from mass 181 upwards.
See also ACTINIDE NUCLEI
LEAD 208
LEAD 210
RADIUM 224
RADIUM 226
RADIUM 228
RADON 222
Hadron Reactions
Data analysis on hadron absorption cross section by nuclei at 5-400 GeV, 8: 19086 (R:SU:In Russian)
Neutron Reactions
Analysis of average radiation widths of neutron resonances, 8: 19158 (R:XJ:In Russian)

HEAVY OILS
See PETROLEUM

HEAVY WATER
Binding Energy
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Chemical Reactions
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

HEAVY WATER COOLANT
See HEAVY WATER

HEAVY WATER MODERATOR
See HEAVY WATER

HELA CELLS
Biological Radiation Effects
Search for the biochemical events leading to the lethality of mammalian cells irradiated with x-rays, 8: 18881 (BA:XE)

HELIOSTATS
Design
Solar Pilot Plant Phase I, detailed design report: collector subsystem research experiment. CDRL Item No. 6 (Approved), 8: 17638 (R:US)
Performance Testing
Solar Pilot Plant Phase I, detailed design report: collector subsystem research experiment. CDRL Item No. 6 (Approved), 8: 17638 (R:US)
HELIUM
Atom-Atom Collisions
Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/s, 2/super 3/s) state with Ar in the thermal energy range, 8: 19069 (R:DE:In German)
Atom-Molecule Collisions
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8: 19051 (R:US)
Binding Energy
Stochastic calculation of interaction energies, 8: 19070 (J:US)
Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
Thermal Conductivity
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
Thermal Diffusion
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
HELIUM 3 TARGET
Electrofission
Electrodisintegration of three-nucleon nuclei in the interpolation model, 8: 19139 (R:UA:In Russian)
Neutron Reactions
Experimental determination of the cross sections of the n-^{3}He-system in the energy range of 1 to 40 MeV, 8: 19141 (R:DE:In German)
Photonuclear Reactions
Use of realistic wave functions in the coherent photoproduction on ^{3}He nuclei, 8: 19137 (R:FR)
HELIUM 4
See also HELIUM II
Nucleon-Nucleon Potential
Local NN interactions in a system of four nucleons and the method of hyperspherical harmonics, 8: 19136 (R:SU:In Russian)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Electron Reactions
Local NN interactions in a system of four nucleons and the method of hyperspherical harmonics, 8: 19136 (R:SU:In Russian)
HELIUM II
The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K).
Second Sound
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow, 8: 19072 (R:DE:In German)
HELIUM IONS
Backscattering
Medium dependence of charge state fractions of MeV He beam, 8: 19056 (RA:US)
Collisions
Charge state distribution of light ions at glancing collision with solid surface, 8: 19057 (RA:US)
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Medium dependence of charge state fractions of MeV He beam, 8: 19056 (RA:US)
Effective Charge
Calculation of the equilibrium mean charge of helium ions, 8: 19055 (RA:US)
Energy Losses
Anomalies in the thickness dependence of the energy loss of helium and nitrogen ions in very thin carbon foils, 8: 19219 (RA:US)
Ion Collisions
Calculation of the equilibrium mean charge of helium ions, 8: 19055 (RA:US)
Ion Spectroscopy
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Ion-Atom Collisions
Medium dependence of charge state fractions of MeV He beam, 8: 19056 (RA:US)
Stopping Power
Stopping power of rare gases in amorphous silicon for MeV helium ions, 8: 19216 (RA:US)
HEMATOPOIESIS
See BLOOD FORMATION
HEMATOPOIETIC SYSTEM

HYDROGEN
Adsorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982

(Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

Binding Energy
Stochastic calculation of interaction energies, 8: 19070 (J:US)

Chemical Reaction Yield
Kinetic measurements for the reaction of NH_3 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)

Chemical Reactions
Kinetic investigations of the reactions of ufg in the gaseous phase, 8: 18335 (R:DE:In German)

Chemisorption
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)

Consumption Rates
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)

Desorption
Electron-stimulated desorption from condensed branched alkanes, 8: 18368 (R:US)

Diffusion
Hydrogen mobility at high concentrations, 8: 18288 (BA:US)

Flammability
Flammability of mixed gases. Investigations report (Hydrogen-methane-carbon monoxide-air), 8: 17495 (R:US)

Getters
Combination moisture and hydrogen getter, 8: 18416 (P:US)

Molecule-Molecule Collisions
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8: 19051 (R:US)

Phase Diagrams
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8: 17327 (R:US)

Yields
Electron-stimulated desorption from condensed branched alkanes, 8: 18368 (R:US)

HYDROGEN 1 TARGET

Spin Orientation
NMR parallel Q-meter with double-balanced-mixer detection for polarized target experiments, 8: 18495 (R:US)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN BROMIDES
See HYDROBROMIC ACID

HYDROGEN FUELS

Feasibility Studies
A clean internal combustion engine for underground mining machinery. A technical assessment and program plan. Final report on Phase I Aug 80-Dec 81, 8: 18409 (R:US)

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 1 MINUS
For H_1^- ions.

Stark Effect
Atomic physics of strongly correlated systems. Progress report, August 1, 1982-July 31, 1983, 8: 19064 (R:US)

HYDROGEN IONS 1 PLUS
For H_1^+ ions.

Collisions
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)

Ion Spectroscopy
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)

HYDROGEN IONS 2 PLUS
For H_2^+ ions.

Collisions
Charge state distribution of light ions at glancing collision with solid surface, 8: 19057 (RA:US)
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)
Interaction of hydrogen molecular ions with thin foils. III. Inner-shell ionization, 8: 19061 (RA:US)

Ion Spectroscopy
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)
Interaction of hydrogen molecular ions with thin foils. III. Inner-shell ionization, 8: 19061 (RA:US)

HYDROGEN IONS 3 PLUS
For H_3^+ ions.

Collisions
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)

Ion Spectroscopy
Interaction of hydrogen molecular ions with thin foils. I. Convoy electrons, 8: 19059 (RA:US)
Interaction of hydrogen molecular ions with thin foils. II. Balmer emission, 8: 19060 (RA:US)

HYDROGEN LOGS
See NEUTRON LOGGING

HYDROGEN PRODUCTION
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8: 17327 (R:US)

Chemical Reactors
Catalytic cartridge SO_3 decomposer (Patent), 8: 17484 (P:US)

Coal Gasification
Synthesis gas made from coal by High-Temperature-Winkler-Process, 8: 17013 (RA:DE)

Photoelectrolysis
Synthesis and characterization of structured interfaces for hydrogen generation. Study of an N,N'-dialkyl-4,4'-bipyridinium redox polymer/palladium catalyst system, 8: 17485 (J:US)

Research Programs
Thermochemical hydrogen production. Volume 1: Program summary. Final report Jan 72-Dec 80, 8: 17480 (R:US)
Thermochemical hydrogen production. Volume 2: Appendix A. Cycle status summaries. Final report Jan 72-Dec 80, 8: 17481 (R:US)
Thermochemical hydrogen production. Volume 3: Appendix B. Discussion of experimental and design work. Final report Jan 72-Dec 80, 8: 17482 (R:US)
Thermochemical hydrogen production. Volume 4: Appendix C. Impacts of materials development for thermochemical water-splitting processes. Final report Jan 72-Dec 80, 8: 17483 (R:US)

Thermochemical Processes
Catalytic cartridge SO_3 decomposer (Patent), 8: 17484 (P:US)
Thermochemical hydrogen production. Volume 1: Program summary. Final report Jan 72-Dec 80, 8: 17480 (R:US)
Thermochemical hydrogen production. Volume 2: Appendix A. Cycle status summaries. Final report Jan 72-Dec 80, 8: 17481 (R:US)
Thermochemical hydrogen production. Volume 3: Appendix B. Discussion of experimental and design work. Final report Jan 72-Dec 80, 8: 17482 (R:US)
Thermochemical hydrogen production. Volume 4: Appendix C. Impacts of materials development for thermochemical water-splitting processes. Final report Jan 72-Dec 80, 8: 17483 (R:US)

HYDROGEN STORAGE
Study of the estimation of likely levels of efficiency and cost attainable in the generation of electric power, based on hydrogen, 8: 17767 (R:US)

Calcium Hydrides
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)
Cerium Hydrides
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)
Economic Analysis
(stationary hydride storage systems as compensation storage systems of electric peak energies). Final report, 8: 17766 (R:US)
Lanthanum Hydrides
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)
Nickel Hydrides
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Catalytic Effects
Survey of synfuel technology for lignite, 8: 17023 (R:US)
Emission
Mitigation of hydrogen sulfide emissions in The Geysers KGRA, 8: 17711 (R:US)
Monitoring
A study to evaluate carbon monoxide and hydrogen sulfide continuous emission monitors at an oil refinery. Final report, 8: 18613 (R:US)
Removal
Mitigation of hydrogen sulfide emissions in The Geysers KGRA, 8: 17711 (R:US)

HYDROGENATION
Catalysis
Applications of functionalized polymers in catalysis. Final report, September 1, 1977-November 30, 1981, 8: 18349 (R:US)
Catalysts
Catalytic hydrogenation of SRC-I product at Wilsonville Pilot Plant, 8: 17042 (RA:US)
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)
Hydrogenation catalysts from intermetallic compounds. Report of investigations/1982, 8: 17052 (R:US)
Kinetics and mechanisms of catalytic hydroliquefaction and hydrogasification of lignite. Final technical report, 8: 17030 (R:US)
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)
Performance of coal liquefaction solvents in selective recycle operation, 8: 17038 (RA:US)
Proceedings of the seventh annual EPRI contractors' conference on coal liquefaction, 8: 17033 (R:US)

HYDROLOGY
Hydrologic characterization of sites for shallow disposal of low-level radioactive wastes, 8: 17382 (RA:US)
Information Systems
Development of a hydrological data bank for ecological information (Federal Republic of Germany), 8: 18746 (R:DE:In German)
Probes
Development of conductivity probe and temperature probe for in-situ measurements in hydrological studies, 8: 19005 (R:BR)

HYDROXIDES
See also LITHIUM HYDROXIDES
POTASSIUM HYDROXIDES
SODIUM HYDROXIDES
Chemical Reaction Yield
Kinetic measurements for the reaction of NH_2 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)

HYDROXYL IONS
See HYDROXIDES

HYDROXYL RADICALS
Chemical Reactions
Pulse radiolytic and product analysis studies of the reaction of hydroxyl radicals with cinnamic acid. The relative extent of addition to the ring and side chain, 8: 18370 (J:US)

HYDROXYPROPIONIC ACID-ALPHA
See LACTIC ACID

HYPERONS
Semileptonic Decay
Electron/hadron discrimination in the hyperon semi-leptonic decay experiments performed at the CERN SPS, 8: 18540 (R:US)

HYPERTHERMIA
Radiosensitivity Effects
Radiation-induced chromosome aberrations, 8: 18897 (BA:XE)

HYPOXIA
See ANOXIA

I

ICE
Geothermal Heating
Geothermal energy for highway snow and ice control. Summary report, 8: 17724 (R:US)
Melting
Geothermal energy for highway snow and ice control. Summary report, 8: 17724 (R:US)

ICRP
Recommendations
Examination of the scientific problems related to radiation protection with a view to improving the planning and application of the results of research to this question, 8: 18842 (BA:XE)

ICRU
Recommendations
Production of recommendations on quantities units, measurements and physical data for clinical radiology, radiobiology, and radiation protection, 8: 19254 (BA:XE)

IDAHO CHEMICAL PROCESSING PLANT
Off-Gas Systems
ICPP ^{85}Kr Monitoring System, 8: 17329 (R:US)

IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Radioactive Waste Disposal
Risk and safety analyses for disposal of alpha-contaminated waste in INEL, 8: 17439 (RA:US)

IDENTIFICATION SYSTEMS
Laser marking of component parts, 8: 18402 (R:US)

IEUS
See also MIUS
Technology Assessment
Perspectives on decentralization, 8: 18009 (BA:US)

IGNITION
Mathematical Models
Ignition and flame-propagation studies with adaptive numerical grids, 8: 18390 (R:US)

IGNITION (THERMONUCLEAR)
See THERMONUCLEAR IGNITION

IGT BIOTHERMAL GASIFICATION
See BIOTHERMGAS PROCESS

ILEUM
See SMALL INTESTINE

ILLINOIS
Energy Source Development
Science research annual, volume II: a collection of science staff memoranda and letters from the Illinois Legislature Council - January-June 1980. Annual report Jan 80-Sep 81, 8: 18019 (R:US)
Energy Sources
Illinois energy production statistical report 1960-1979, 8: 18074 (R:US)

Geology
Lessons learned in a hydrogeological case at Sheffield, Illinois, 8: 17385 (RA:US)
Hydrology
Lessons learned in a hydrogeological case at Sheffield, Illinois, 8: 17385 (RA:US)
Radioactive Waste Disposal
Geological case history: lessons learned at Sheffield, Illinois, 8: 17378 (RA:US)
Lessons learned in a hydrogeological case at Sheffield, Illinois, 8: 17385 (RA:US)
Radioactive Waste Processing
Science: issues in Illinois (reprints of science columns from Illinois Issues, February 1980-May 1981), 8: 18020 (R:US)

IMAGES
Optimization
2-D fitting and interpolation applied to image-distortion analysis, 8: 18825 (R:US)
Spectra and physical factors in x-ray diagnosis, 8: 18841 (BA:XE)

IMMUNOGLOBULINS
Chemical Radiation Effects
Investigation on the radiation damage in biomolecules, 8: 18921 (BA:XE)

IMMUNOSUPPRESSIVE DRUGS
Biological Effects
Consequences of radiation exposure: prevention and treatment of pathological effects, 8: 18990 (BA:XE)

IMPERFECTIONS
See DEFECTS

IN PILE LOOPS
Decontamination
Postaccident decontamination of reactor primary systems and test loops, 8: 17935 (R:US)

INCIDENTS
See ACCIDENTS

INCINERATION
See COMBUSTION

INCOLOY 800
Mechanical Properties
Influence of thermal aging on the mechanical properties of alloy 800, 8: 18246 (R:IT:IT)

INCOMPRESSIBLE FLOW
Pressure Measurement
Similarity flows between a rotating and a stationary disk, 8: 18456 (R:BR)

INCONEL 718
Friction
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)
Wear
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)

IN-CORE FUEL MANAGEMENT
See FUEL MANAGEMENT

INDIANA
Energy Policy
Local energy-management process, 8: 17988 (R:US)

INDIUM
Neutron Reactions
Fast-neutron total and elastic-scattering cross sections of elemental indium, 8: 19168 (R:US)
Proton Transport
Stopping powers of Zr, Pd, Cd, In and Pb for 6.5 MeV protons and mean excitation energies, 8: 19208 (RA:US)

INDIUM 115 TARGET
Neutron Reactions
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{115}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)
Proton Reactions
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{115}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)

INDIUM 116
Neutron Emission
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{115}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)

INDONESIA
Coal Gasification
Possibilities of utilizing Indonesian coal by carbonisation and gasification, 8: 17015 (RA:DE)
Coal Industry
Possibilities of utilizing Indonesian coal by carbonisation and gasification, 8: 17015 (RA:DE)

INDOOR AIR POLLUTION
Environmental Policy
Indoor air pollution: an emerging health problem, 8: 18959 (R:US)
Health Hazards
Indoor air pollution: an emerging health problem, 8: 18959 (R:US)

INDUCED RADIOACTIVITY
See RADIOACTIVITY

INDUSTRIAL LAUNDRIES
See LAUNDRIES

INDUSTRIAL MEDICINE
Public Policy
The utility of administrative diagnostic x rays. Final report, 8: 18839 (R:US)

INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
COAL PREPARATION PLANTS
ETHANOL PLANTS
FEED MATERIALS PLANTS
OIL SHALE PROCESSING PLANTS
PETROLEUM REFINERIES
SYNTHETIC FUELS REFINERIES
WASTE PROCESSING PLANTS
Air Pollution Control
Economic and environmental analysis of the current OSHA lead standard. Appendix H. Feasibility and cost of lead-in-air controls in the lead-acid battery industry, 8: 18022 (R:US)
Boilers
Costs of sulfur dioxide, particulate matter, and nitrogen oxide controls on fossil fuel fired industrial boilers. Final report, 8: 18482 (R:US)
Cogeneration
Cogeneration feasibility study. Final report, 8: 17763 (R:US)
Feasibility case study concerning refuse-burning modular incineration with cogeneration in Chicago. Energy management memorandum TM-82-3, 8: 18204 (R:US)
Feasibility of cogeneration for a single process industry. Energy management memorandum TM-82-5, 8: 18187 (R:US)
Study of the potential for cogeneration in Canada industrial steam turbines. Volume 1 - main report, 8: 18045 (B:CA)
Gas Furnaces
Performance modeling of advanced gas burner systems. Annual report may 81-jun 82, 8: 18479 (R:US)
Power Demand
Utility spot-pricing study: Wisconsin, 8: 18109 (R:US)
Water Requirements
Estimating water demand schedules for selected industries in Arkansas, 8: 18028 (R:US)

INDUSTRIAL RADIOGRAPHY
See also BIOMEDICAL RADIOGRAPHY.
Steam-generator support-plate radiographic evaluation system. Final report, 8: 17824 (R:US)

INDUSTRIAL SECTOR
See INDUSTRY

INDUSTRIAL WASTES
Air Pollution Control
Controls for fine particle emissions from industrial sources in California. Final report, 8: 18671 (R:US)
Recycling
Separation of alcohol-water mixtures by selective adsorption. Final technical report, 8: 18193 (R:US)

INDUSTRY
See also AGRICULTURE

COAL INDUSTRY
CONSTRUCTION INDUSTRY
FOOD INDUSTRY
METAL INDUSTRY
NATURAL GAS INDUSTRY
NUCLEAR INDUSTRY
OIL SHALE INDUSTRY
PETROLEUM INDUSTRY
SOLAR INDUSTRY
WOOD PRODUCTS INDUSTRY

Air Pollution
Compilation of air pollutant emission factors, third edition, supplement 13 (including supplements 1-7), 8: 18675 (R:US)
Energy Analysis
Existence and uniqueness of solutions to the EIA: long term model, 8: 18190 (R:US)
Energy Consumption
Industrial energy productivity project: other industries. Final report, 8: 18183 (R:US)
Energy Efficiency
Analytic tools for techno-economic assessments of industrial energy efficiency in developing countries, 8: 17997 (R:US)
Industrial Energy-Efficiency Improvement Program. Annual report to the Congress and the President 1980, 8: 18180 (R:US)
Fuel Supplies
The economic theory of enhanced natural gas service to the industrial sector: an applied approach. Final report, 8: 17273 (R:US)
Process Control
Process design and control strategies for energy efficiency in the process industries. Progress report, April 1, 1980-December 31, 1982, 8: 18191 (R:US)
Productivity
Industrial energy productivity project: other industries. Final report, 8: 18183 (R:US)

INFORMATION DISSEMINATION
Recommendations
Procedures for checking the proper classification of reports declassified during the comprehensive review, 8: 18039 (R:US)

INFRARED SPECTROMETERS
Data Processing
Spectra identification and interpretation comparing the spectral informations - the example of infrared, C^{13} magnetic resonance and mass spectroscopy, 8: 18255 (R:DE:In German)

INITIAL RESERVOIR PRESSURE
See RESERVOIR PRESSURE

INJECTION WELLS
Testing
Response of RRGI 6 and RRGI 7 to injection during the 5-MW plant operations, March 25 to June 15, 1982, at Raft River, Idaho, 8: 17707 (R:US)

INNER-SHELL IONIZATION
Wave Functions
Perturbed stationary-state description of the polarization effect in innershell ionization, 8: 19054 (RA:US)

INNS
See HOTELS

INPUT WELL
See INJECTION WELLS

INSECTICIDES
See also DDT
Toxicity
Cadmium and endrin toxicity to fish in waters containing mineral fibers, 8: 18975 (R:US)

IN-SERVICE INSPECTION
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)
Optical Scanners
Optical probe for steam-generator-tube dent measurement. Final report (PWR), 8: 17832 (R:US)

IN-SITU COMBUSTION
Ignition
Laboratory tests at elevated pressures of a silane igniter system for in-situ coal gasification, 8: 17067 (R:US)

IN-SITU GASIFICATION
Bench-Scale Experiments
Laboratory tests at elevated pressures of a silane igniter system for in-situ coal gasification, 8: 17067 (R:US)
Commercialization
Angrenskaya underground coal gasification station, 8: 17066 (R:US)
Electric Heating
Energy production by electrical induction heating, 8: 17078 (BA:US)
Field Tests
Finite-element modeling of thermo-mechanical responses associated with underground coal conversion, 8: 17024 (R:US)
Fracture Mechanics
Structural and fracture mechanics modeling associated with underground coal conversion. Final report, April 1, 1980-June 15, 1982, 8: 17025 (R:US)
Ground Subsidence
Finite-element modeling of thermo-mechanical responses associated with underground coal conversion, 8: 17024 (R:US)
Mathematical Models
Finite-element modeling of thermo-mechanical responses associated with underground coal conversion, 8: 17024 (R:US)
Research Programs
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
LLNL underground coal gasification project. Quarterly progress report, July-September 1982, 8: 17065 (R:US)
Simulators
Structural and fracture mechanics modeling associated with underground coal conversion. Final report, April 1, 1980-June 15, 1982, 8: 17025 (R:US)
Technology Assessment
Underground coal gasification: current status (USA), 8: 17079 (BA:US)
Technology Transfer
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Waste Water
Toxicity studies of underground coal gasification and tarsands processes. Progress report, February 1, 1982-January 31, 1983, 8: 17192 (R:US)

IN-SITU RETORTING
Electric Heating
Energy production by electrical induction heating, 8: 17078 (BA:US)
Waste Water
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

INSOLATION
Monitoring
Project Ahupua'a: solar meteorological field measurements on the Island of Hawaii, Summer 1978. 5. Southern flank of Mauna Loa, 8: 17746 (R:US)

INSULATORS (ELECTRICAL)
See ELECTRICAL INSULATORS

INTEGRATED CIRCUITS
Specifications
Detection electronics for proportional chambers, 8: 18535 (R:SU:In Russian)

INTEGRATED ENERGY UTILITY SYSTEMS
See IEUS

INTEGRATORS (PULSE)
See PULSE INTEGRATORS

INTERCONNECTED POWER SYSTEMS
Dynamics
Inclusion principle for dynamic systems. Final report, September 1, 1977-April 30, 1982, 8: 17780 (R:US)
Lyapunov Method
Inclusion principle for dynamic systems. Final report, September 1, 1977-April 30, 1982, 8: 17780 (R:US)

Perturbation Theory
Some remarks on the derivability of linear nonconservative systems from a Lagrangian, 8: 17769 (J:US)

INTERCRYSTALLINE CORROSION
See INTERGRANULAR CORROSION

INTERFACES (EQUIPMENT)
See EQUIPMENT INTERFACES

INTERGRANULAR CORROSION
Eddy Current Testing
Eddy-current NDE for intergranular attack. Final report (PWR), 8: 17831 (R:US)

INTERMEDIATE MASS NUCLEI
For nuclei with mass 41-180.

Small angle neutron scattering study of metallic alloys by a double crystal device, 8: 19239 (R:HU)
Oxidation
Fundamental studies of high-temperature-corrosion reactions. Technical progress report, 8: 18248 (R:US)
High-temperature corrosion of iron in sulfur-containing atmospheres (CO_2-10% SO_2 at 871°C), 8: 18260 (R:US)
Physical Radiation Effects
Effect of irradiation on phosphorus segregation, 8: 18266 (R:US)
PIXE Analysis
Preliminary data on atmospheric aerosol of the Amazon basin, 8: 18604 (R:BR)
Trace-elements of the atmospheric aerosol of the Amazon basin, 8: 18602 (R:BR)
Sulfidation
High-temperature corrosion of iron in sulfur-containing atmospheres (CO_2-10% SO_2 at 871°C), 8: 18260 (R:US)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)

IRON 54 TARGET
Sulfur 32 Reactions
Identification of new isotopes with a time-of-flight mass spectrometer and total β^+ decay energy measurement of these nuclei in the deformation region N=Z=40, 8: 19155 (R:FR:In French)

IRON 56 TARGET
Neutron Reactions
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Taking account of finite geometry effects in epxerimental studies of the (n,n'γ) reactions, 8: 19157 (RA:SU:In Russian)

IRON 57
Electronic Structure
Measurement of spin polarisation in ^{57}Fe metal, 8: 18253 (R:DE:In German)
Microdosimetry
Biological effects of incorporated isotopes and radiation of high ionization density, 8: 18873 (BA:XE)
Moessbauer Effect
Measurement of spin polarisation in ^{57}Fe metal, 8: 18253 (R:DE:In German)
Spin Orientation
Measurement of spin polarisation in ^{57}Fe metal, 8: 18253 (R:DE:In German)

IRON 59
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

IRON ALLOYS
See also IRON BASE ALLOYS
NIMONIC PE16
STELLITE 6
TRIBALOY 400
Heat Treatments
Method for heat treating iron-nickel-chromium alloy, 8: 18270 (P:US)

IRON BASE ALLOYS
See also STEELS
Aging
Aging response of a welded iron-based superalloy (JBK-75 (Fe-28 Ni-15 Cr-2 Ti-1 Mo)), 8: 18258 (R:US)
Creep
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)
Microstructure
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)
Raman Effect
Structural properties of amorphous metals by Raman scattering. Progress report, June 1, 1981-May 31, 1983, 8: 18250 (R:US)
Swelling
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)

IRON CHLORIDES
Particle Resuspension
Resuspension of particles from ground surfaces, 8: 18700 (BA:XE)

IRON COMPLEXES
Catalytic Effects
Comparative semiempirical study of oxygen binding to model iron complexes of phthalocyanine and porphyrin, 8: 18358 (J:US)
Chemical Bonds
Comparative semiempirical study of oxygen binding to model iron complexes of phthalocyanine and porphyrin, 8: 18358 (J:US)

IRON ORES
Maritime Transport
Iron ore traffic analysis to accompany Great Lakes harbors study, 8: 18167 (R:US)
Pelletizing
Use of low-Btu gas in iron ore pelletizing, 8: 17070 (J:US)

IRON OXIDES
Catalytic Effects
Kinetics and mechanisms of catalytic hydroliquefaction and hydrogasification of lignite. Final technical report, 8: 17030 (R:US)
Surface Coating
Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed, 8: 19023 (J:GB)

IRON SULFIDES
Catalytic Effects
Kinetics and mechanisms of catalytic hydroliquefaction and hydrogasification of lignite. Final technical report, 8: 17030 (R:US)

IRRIGATION
Water Requirements
Method for estimating historical irrigation requirements from ground water in the high plains in parts of Colorado, Kansas, Nebraska, New Mexico, Oklahoma, South Dakota, Texas, and Wyoming. Water-resources investigations (interim), 8: 18851 (R:US)
Water Supply
Competition between irrigation and hydropower water use in Washington state. Project completion report 1 Oct 78-30 Sep 80, 8: 17522 (R:US)

ISABELLE

Work Functions
Thermionic-emission microscopy of polycrystalline molybdenum and Mo-$LaCrO_3$ (Mo-$LaCrO_3$), 8: 18130 (R:US)
LANTHANUM SELENIDES
Chemical Preparation
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Chemical Reactions
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Electric Conductivity
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Seebeck Effect
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
LASER CAVITIES
Design
Axial flow laser cavity (Patent application), 8: 18447 (P:US)
LASER FUSION REACTORS
Beam Shaping
Raman accumulator as a fusion laser driver (Patent), 8: 19350 (P:US)
Nozzles
Design considerations of the HYLIFE nozzle plate, 8: 19348 (J:GB)
LASER ISOTOPE SEPARATION
Quantum dynamical model of laser-stimulated isotope separation of adsorbed species: role of anharmonicity, coupling strength and energy feedback from the heated substrate. Technical report, 8: 17323 (R:US)
Quantum model of laser excitation of isotopic species adsorbed on a solid surface. Interim technical report, 8: 18331 (R:US)
LASER MATERIALS
Defects
Research on materials for high power laser windows. Final technical report 1 jun 75-31 may 77, 8: 18435 (R:US)
Fabrication
Development of a novel laser material for miniaturized laser systems. Final technical report 8 nov 80-31 dec 81, 8: 18432 (R:US)
Fractures
Research on materials for high power laser windows. Final technical report 1 jun 75-31 may 77, 8: 18435 (R:US)
Luminescence
Development of host crystals for ce(+3) blue and blue-green solid-state lasers. Final report 1 Jan-30 Jun 82, 8: 18430 (R:US)
LASER POWER TRANSMISSION
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs, 8: 17785 (R:US)
Laser power conversion system analysis, 8: 17787 (R:US)
Preliminary study on the use of lasers for the transmission of power, 8: 17784 (R:US)
Space laser power transmission, 8: 17788 (R:US)
Utility and technology for a space central power station, 8: 17786 (R:US)
Feasibility Studies
Design investigation of solar-powered lasers for space applications, 8: 17621 (R:US)
Meetings
Space laser power transmission system studies, 8: 17789 (R:US)
LASER RADIATION
Beam Shaping
Raman accumulator as a fusion laser driver (Patent), 8: 19350 (P:US)
LASER SPECTROSCOPY
Comparative Evaluations
Comparative evaluations of analytical methods for uranium with regard to application in exploring uranium, 8: 18313 (R:DE:In German)
LASER TARGETS
Laser Implosions
Nonuniformities in laser-ablated plasma, 8: 19336 (R:US)
Research Programs
High-power pulsed lasers used in fusion research, 8: 19346 (R:US)
LASER WELDING
Welding Machines
Laser weld jig (Patent), 8: 18273 (P:US)
LASER-PRODUCED PLASMA
Electron Density
Studying electron distributions using the time-resolved free-bound spectra from coronal plasmas, 8: 19347 (R:US)

Energy Transfer
Studying electron distributions using the time-resolved free-bound spectra from coronal plasmas, 8: 19347 (R:US)
Lyman Lines
Plasma shifts of CVI Lyman lines to shorter wavelengths. Annual report, November 4, 1981-September 30, 1982, 8: 19285 (R:US)

LASERS
Light Amplification by Stimulated Emission of Radiation.

The development of solar-assisted gas-fired appliances: phase ii. Final report dec 80-nov 81, 8: 17672 (R:US)

LAWRENCE LIVERMORE LABORATORY
Research Programs
Earth Sciences Department collected abstracts: 1981, 8: 19008 (R:US)

LAX THEOREM
Korteweg-De Vries Equation
Nonautonomous form of the theory of Lax equations, 8: 19266 (J:IT)

LC-FINING
Catalysts
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)
Process Development Units
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)

LEACHATES
Chemical Composition
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Environmental Impacts
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)

LEAD
Air Pollution Control
National ambient air quality standard for lead. Draft environmental impact statement, 8: 18639 (R:US)
Recovery of cadmium, zinc, and lead from lead smelter flue dusts. Report of investigations/1982, 8: 18621 (R:US)
Charged-Particle Transport
Stopping power of Ni, Ag, Au and Pb for ~ 7 MeV/n α-particles and carbon ions (Z_1^2 proportional deviation from the Bethe formula), 8: 19212 (RA:US)
Ecological Concentration
Prediction of pediatric blood lead levels from gasoline consumption, 8: 18714 (R:US)
Time-series analysis for identification of particle-emission sources, 8: 18589 (R:US)
Electronic Structure
Properties of ten electronic states of Pb_2 from relativistic quantum calculations, 8: 18339 (J:US)
Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
Excitation
Properties of ten electronic states of Pb_2 from relativistic quantum calculations, 8: 18339 (J:US)
Ion Collisions
Medium dependence of charge state fractions of MeV He beam, 8: 19056 (RA:US)
Materials Recovery
Recovery of metals from geothermal brine, 8: 17713 (P:US)
Monitoring
Compilation of air pollutant emission factors, third edition (including supplements 1-7) supplement 12, 8: 18620 (R:US)
Supplementary guidelines for lead implementation plans revised Section 4.3 (Projecting Automotive Lead Emissions). Final report, 8: 18625 (R:US)
Photoneutrons
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Photonuclear Reactions
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Proton Transport
Stopping powers of Zr, Pd, Cd, In and Pb for 6.5 MeV protons and mean excitation energies, 8: 19208 (RA:US)

LEAD 208
Binding Energy
Hartree-Fock problem for Skyrme interaction. Fundamental description for double magic nuclei, 8: 19195 (R:IT:IT)
Nuclear Radii
Hartree-Fock problem for Skyrme interaction. Fundamental description for double magic nuclei, 8: 19195 (R:IT:IT)

LEAD 208 TARGET
Alpha Reactions
Experimental evidence for giant multipole resonances at high excitation energies, 8: 19180 (R:FR)
Carbon 12 Reactions
Mechanisms of alpha emitter production in ^{12}C induced reactions at 1 GeV, 8: 19176 (R:FR)

LEAD 210
Excretion
Mobilization and specific decorporation of heavy alkaline earth metals, 8: 18947 (BA:XE)

Radioecological Concentration
Dose exposure of the environmental population by natural and released Ra-226 and Pb-210 from an uranium mine prospect, 8: 18861 (R:DE:In German)
LEAD-ACID BATTERIES
Monitoring
Ultrasonic hydrometer (Specific gravity of electrolyte), 8: 17983 (P:US)
LEAKAGE
See LEAKS
LEAKS
Containment
Leak response gelling of liquefied natural gas (LNG). Final report Jan-Oct 81, 8: 17289 (R:US)
LEASES
Reporting Requirements
Repeal of unneeded Outer Continental Shelf production rate-setting functions would cut costs, 8: 17224 (R:US)
LEBANON

Chemical Analysis
Components identified in energy-related wastes and effluents. Final report Nov 76-Nov 79, 8: 18754 (R:US)
LIQUIDS
See also COAL LIQUIDS
LIQUID METALS
Equilibrium
Thermodynamic consistency test procedure using orthogonal collocation and the Peng-Robinson equation of state, 8: 18336 (R:US)
Pool Boiling
Computation of the bubble growth in pool boiling of liquids on heated surfaces as a numerical solution of the conservation equations, 8: 18450 (R:DE:In German)
LITHIUM
Binding Energy
Stochastic calculation of interaction energies, 8: 19070 (J:US)
Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
LITHIUM 6 TARGET
Deuteron Reactions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
Neutron Reactions
Compact analytical representation of the ENDF/B-V evaluated cross sections for the $^{6}Li(n,\alpha)$, $^{10}B(n,\alpha_0)$, $^{10}B(n,\alpha_1)$, $^{10}B(n,\alpha)$ reactions, 8: 19148 (RA:SU:In Russian)
Proton Reactions
(p, 2p) reaction on the ^{6}Li nuclei at the 70 MeV incident protons, 8: 19150 (RA:SU:In Russian)
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
Triton Reactions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)

LITHIUM 7
Neutron Transport
Kerma-factor in neutron interaction with ^{7}Li, 8: 19236 (RA:SU:In Russian)
LITHIUM 7 TARGET
Deuteron Reactions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
Proton Reactions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
Triton Reactions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
LITHIUM FLUORIDES
Atom Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
LITHIUM HYDRIDES
Binding Energy
Stochastic calculation of interaction energies, 8: 19070 (J:US)
LITHIUM HYDROXIDES
Microwave Spectra
Molten carbonates: microwave studies of the vapor state. Progress report, June 1, 1982-May 31, 1983, 8: 18131 (R:US)
Structural Chemical Analysis
Molten carbonates: microwave studies of the vapor state. Progress report, June 1, 1982-May 31, 1983, 8: 18131 (R:US)
LITHIUM-CHLORINE BATTERIES
Electrolytes
Lithium cycling in polymethoxymethane solvents. Technical report, 8: 17973 (R:US)
Thermal decomposition of dimethoxymethane electrolyte solution. Technical report, 8: 17972 (R:US)
LITHIUM-SULFUR BATTERIES
Electrolytes
Properties of $SOCl_2$ electrolyte solutions. Conference paper, 8: 17974 (R:US)

MAGNETOHYDRODYNAMICS
Data Processing
Radiation from high temperature plasmas. Phase II. Final report 15 Jul 81-14 Jul 82, 8: 19358 (R:US)
MAGNETOSPHERE
Electric Fields
Electric fields in earth orbital space. Annual report, 8: 19045 (R:US)
Plasma
Ion-cyclotron turbulence and diagonal double layers in a magnetospheric plasma, 8: 19047 (R:US)
MAHOGANY TREES
See TREES
MAINE
Electric Utilities
Public Utility Commission manual for Section 210 of PURPA for Maine, 8: 18093 (R:US)
Energy Policy
Local energy-management process, 8: 17988 (R:US)
Geology
Consultation and concurrence for NWTS in crystalline rocks. Quarterly progress report, October 1, 1982-December 31, 1982, 8: 17362 (R:US)
Radioactive Waste Disposal
Consultation and concurrence for NWTS in crystalline rocks. Quarterly progress report, October 1, 1982-December 31, 1982, 8: 17362 (R:US)
MALIGNANCIES
See NEOPLASMS
MAMMARY GLANDS
Biological Radiation Effects
Biological effectiveness of neutron radiation for carcinogenesis, 8: 18945 (BA:XE)

Delayed Radiation Effects
Microdosimetric studies relevant to radiation protection, 8: 18875 (BA:XE)

MANGANESE
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)

MANGANESE 54
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

MANGANESE OXIDES
Surface Coating
Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed, 8: 19023 (J:GB)

MANNOMUSTINE
See ALKYLATING AGENTS

MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS

MANURES
Anaerobic Digestion
Anaerobic digestion of cattle manure, 8: 17497 (BA:GB)
Waste Processing
Livestock waste treatment system (Patent), 8: 17618 (TG:US)

MARICULTURE
See AQUACULTURE

MARINE DISPOSAL
Environmental Impacts
Stabilized coal waste in the Chesapeake Bay-Choptank River estuary: environmental investigations. Final report, 8: 17127 (R:US)

MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

MARINE VEHICLE ACCIDENTS
See ACCIDENTS

MARKET
Computer Codes
Measures of value in a linear-programming model of the US energy system, 8: 18050 (R:US)

MARKET SHARES
See MARKET

MARYLAND
Fossil-Fuel Power Plants
Vienna fly ash disposal site: problem definition study. Final report, 8: 18755 (R:US)
Water Quality
Stream water quality in the coal region of West Virginia and Maryland. General technical report (final), 8: 17130 (R:US)

MASKS
See RESPIRATORS

MASS SPECTRA
Data Processing
Computer processing of mass-spectral data. Part V. Assignment of formulas to experimental masses. Representative databases for program FZM, 8: 18348 (R:US)

MASS SPECTROMETERS
Data Processing
Spectra identification and interpretation comparing the spectral informations - the example of infrared, C^{13} magnetic resonance and mass spectroscopy, 8: 18255 (R:DE:In German)
Ion Sources
Ion source for high-precision mass spectrometry, 8: 18327 (P:US)

MASS SPECTROSCOPY
Computer Calculations
Computer processing of mass-spectral data. Part V. Assignment of formulas to experimental masses. Representative databases for program FZM, 8: 18348 (R:US)
Diagnostic Techniques
Medical applications of stable isotopes: mass spectroscopy and nuclear magnetic resonance, 8: 18826 (R:US)
Optimization
Ion source for high-precision mass spectrometry, 8: 18327 (P:US)

MASSACHUSETTS
Electric Utilities
Developer handbook for Section 210 of PURPA for Massachusetts, 8: 18096 (R:US)
Public Utility Commission manual for Section 210 of PURPA for Massachusetts, 8: 18089 (R:US)

ZINC
Aerosol Monitoring
Source-receptor reconciliation of South Coast Air Basin particulate air quality data. Final report Jul 79-Jan 81, 8: 18672 (R:US)
Anodization
Method for anodic oxidation of metals and their alloys, 8: 18275 (TG:US)
Charged-Particle Transport
Effective charge of energetic ions in metals, 8: 19223 (RA:US)
Electrodeposition
Electrochemical properties of small clusters of metal atoms and their role in surface enhanced Raman scattering, 8: 18359 (J:US)
Environmental Effects
Elemental cycling in southern pine plantations with nutrient and heavy metal amendments. Annual report, FY 1982, 8: 18713 (R:US)
Fracture Properties
Investigations on elastic-plastic fracture mechanics by means of the infiltration technique, 8: 18276 (B:DE:In German)
Monitoring
Air quality data for non-criteria pollutants - 1957 through 1970. Final report, 8: 18615 (R:US)
Proton Transport
Computer simulation of geometrical effects on the stopping power for 7 MeV protons, 8: 19210 (RA:US)
Sorptive Properties
Adsorption on metal surfaces. Progress report, May 1, 1980-April 30, 1983, 8: 19259 (R:US)
METEOROLOGY
Meteorology and climatology as parameters on low level waste disposal monitoring, 8: 17390 (RA:US)
On-site meteorological measurements for low-level radioactive waste disposal, 8: 17391 (RA:US)
Data Acquisition
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Dictionaries
A glossary of selected meteorology terms. Final report, 8: 18586 (R:US)
METER WAVE RADIATION
See RADIOWAVE RADIATION
METHANATION
Catalysts
Basic studies of new coal conversion catalysts. Annual report, 8: 17059 (R:US)
Development of catalysts for coal conversion. Annual report Jan-Dec 80, 8: 17058 (R:US)
Evaluation of coal conversion catalysts. Annual report, 8: 17060 (R:US)
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)

Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Hydrogenation catalysts from intermetallic compounds. Report of investigations/1982, 8: 17052 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

METHANE

Adsorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

Biosynthesis
Dry fermentation of agricultural residues. Final subcontract report, 8: 17586 (R:US)
Future trends in digester design, 8: 17498 (BA:GB)

Chemical Reaction Yield
Coal-gasification and tar-conversion reactions over calcium oxide. Annual progress report, August 1, 1981-October 31, 1982, 8: 17026 (R:US)

Combustion
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor, 8: 17294 (R:GB)

Desorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

Flammability
Flammability of mixed gases. Investigations report (Hydrogen-methane-carbon monoxide-air), 8: 17495 (R:US)

Gas Flow
Degasification of the Mary Lee Coalbed, Brookwood, Alabama. Report of investigations/1982, 8: 17150 (R:US)

Monitoring
Development of a continuous methane monitor. Open file report Jun 77-Mar 80, 8: 18662 (R:US)

Oxidation
Application of the ESCIMO theory to the oxidation of methane in a stirred reactor, 8: 17294 (R:GB)

Pollution Sources
Processes affecting the distribution of low-molecular-weight aliphatic hydrocarbons in Cook Inlet, Alaska. Technical memo, 8: 18761 (R:US)

Production
A.S.E.F. solid-waste-to-methane gas, Pompano Beach, Florida. RefCOM - technical status report, October 1982-January 12, 1983, 8: 18201 (R:US)
Anaerobic digestion of cattle manure, 8: 17497 (BA:GB)
Dynamic simulation modeling of landfill gas generation and processing, 8: 18015 (RA:US)
Gasification of land-based biomass. Annual report jan-dec 81, 8: 17493 (R:US)
SNG from land-based biomass 1981 program. Final report Jul-Dec 81, 8: 17492 (R:US)

METHANE HYDRATES
See GAS HYDRATES

METHANOGENIC BACTERIA

Biochemistry
Reconstitution of mesophilic microbial associations which ferment cellulose to various products, 8: 17499 (BA:FR)

METHANOL

Binding Energy
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Chemical Composition
Liquid-phase methanol project status and laboratory results, 8: 17502 (RA:US)

Chemical Reactions
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Oxidation
Dynamic models for the control of a highly exothermic packed bed reactor, 8: 17500 (R:US)

Solubility
Solubilities of small molecules in liquid krypton, 8: 18338 (J:US)

Synthesis
Gasification of biomass in fluidized bed, 8: 17559 (RA:DE:In German)
Hydrogenation catalysts from intermetallic compounds. Report of investigations/1982, 8: 17052 (R:US)
Liquid-phase methanol project status and laboratory results, 8: 17502 (RA:US)
Manufacture of synthetic gas by gasification of wood by the Rheinbraun HT Winkler process, 8: 17560 (RA:DE:In German)

Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Transport
Methanol-use options study: Phase 1. Final report, 8: 17514 (R:US)

Uses
Methanol-use options study: Phase 1. Final report, 8: 17514 (R:US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.

Environmental Impacts
Regulatory assessment: interim report, 8: 17501 (R:US)

Risk Assessment
Regulatory assessment: interim report, 8: 17501 (R:US)

Transport
Distribution of methanol as a transportation fuel. Technical report, 8: 17503 (R:US)
Methanol-use options study: Phase 1. Final report, 8: 17514 (R:US)

Uses
Methanol-use options study: Phase 1. Final report, 8: 17514 (R:US)

METHYL ALCOHOL
See METHANOL

METHYL METHANESULFONATE

Biological Effects
Radiation- and drug-induced DNA repair in mammalian oocytes, 8: 18954 (BA:US)

METHYL RADICALS

Desorption
Electron-stimulated desorption from condensed branched alkanes, 8: 18368 (R:US)

Yields
Electron-stimulated desorption from condensed branched alkanes, 8: 18368 (R:US)

METHYL VIOLOGEN

NEUTRINO DETECTION
Activation Detectors
Underground science at Homestake (X-ray spectra from e.c. decay of ^{37}Ar from ^{37}Cl(nu, e$^-$)^{37}Ar), 8: 18521 (R:US)
NEUTRINO-ELECTRON INTERACTIONS
Scattering
Neutrino-electron scattering. Progress report, 8: 19074 (R:US)
NEUTRINO-PROTON INTERACTIONS
Inclusive Interactions
Investigation of quark and diquark fragmentation in νp and anti νp charged current interactions in BEBC, 8: 19098 (B:DE)
NEUTRINOS
See also SOLAR NEUTRINOS
Mass
Early results from the Battelle-Carolina ^{76}Ge double-beta-decay project, 8: 19166 (R:US)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON ACTIVATION ANALYZERS
Accuracy
An automated multidetector system for instrumental neutron activation analysis of geological and environmental materials, 8: 17097 (BA:US)
NEUTRON BEAMS
Beam Transport
Characteristics of mirror neutron guides made of the "float" type glass, 8: 19234 (RA:SU:In Russian)
Depolarization
Depolarisation effects in resonance absorption neutron polarising filters, 8: 19240 (R:US)
Polarized Beams
Development in LIYaF of the method of polarized thermal neutron beam production by mirror reflection, 8: 19233 (RA:SU:In Russian)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON DETECTION
Coincidence Methods
Calibration of an active well coincidence counter for ^{235}U measurements, 8: 18544 (J:NL)
NEUTRON DETECTORS
See also ACTIVATION DETECTORS
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
NEUTRON DIFFRACTOMETERS
Monochromators
Instrument and method for focusing x rays, gamma rays, and neutrons, 8: 18557 (P:US)
Multiwire Proportional Chambers
Two-coordinate detector for the neutron time-of-flight diffractometer. Pt. 1. Construction and testing, 8: 18537 (R:SU:In Russian)
Position Sensitive Detectors
Two-coordinate detector for the neutron time-of-flight diffractometer. Pt. 1. Construction and testing, 8: 18537 (R:SU:In Russian)

NEUTRON DIFFUSION EQUATION
Computer Calculations
EXPANDA-General user's guide, 8: 19238 (R:JP)
NEUTRON DOSIMETRY
Microdosimetry and neutron dosimetry, 8: 19248 (BA:XE)
Neutron dosimetry in radiation protection, 8: 19255 (BA:XE)
Dosemeters
Tactical gamma and fast neutron dosimetry with leuko dye optical waveguides. Conference paper, 8: 18520 (R:US)
Evaluation
Collection and evaluation of neutron dosimetry data (CENDOS), 8: 19253 (BA:XE)
Optimization
Radiation spectrometry and microdosimetric studies, 8: 19257 (BA:XE)
NEUTRON ECONOMY
See NEUTRON FLUX
NEUTRON FLUX
Computer Codes
MMK 22p code for calculating the neutron flux by the Monte-Carlo method in the subgroup approximation, 8: 19226 (R:SU:In Russian)
NEUTRON FLUX DENSITY
See NEUTRON FLUX
NEUTRON LOGGING
Neutron Sources
Helium release from tritium occluders in Zetatron tubes, 8: 18498 (R:US)
NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON REACTIONS
Analysis of average radiation widths of neutron resonances, 8: 19158 (R:XJ:In Russian)
Review of 241 Pu resonance parameters, 8: 19185 (R:FR)
Charge-Exchange Reactions
Experimental determination of the cross sections of the n-^{3}He-system in the energy range of 1 to 40 MeV, 8: 19141 (R:DE:In German)
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Cross Sections
Application of the coupled-channel optical model to the calculation of fast neutron cross sections on odd-A actinide nuclei, 8: 19187 (R:FR:In French)
Approximation of neutron cross sections in the resolved resonance energy range, 8: 19198 (RA:SU:In Russian)
Evaluation of 238 Pu neutron cross-sections in the energy range 10^{-5} eV to 3 MeV, 8: 19184 (R:FR)
Evaluation of neutron nuclear data for deuterium, 8: 19144 (R:JP)
Neutron cross section calculations for neutron-rich nuclei, 8: 19199 (RA:SU:In Russian)
Report to the DOE Nuclear Data Committee, 1982, 8: 19135 (R:US)
Elastic Scattering
Derivation of the generalized frequency spectra of moderator atom oscillation from experimental double differential scattering cross section of slow neutrons, 8: 19235 (RA:SU:In Russian)
Differential cross section measurement of the elastic neutron-deuteron-scattering in the energy range 2.5-30 MeV, 8: 19142 (R:DE:In German)
Experimental determination of the cross sections of the n-^{3}He-system in the energy range of 1 to 40 MeV, 8: 19141 (R:DE:In German)
Fast-neutron total and elastic-scattering cross sections of elemental indium, 8: 19168 (R:US)
Fast-neutron scattering cross sections of elemental zirconium, 8: 19167 (R:US)
Excitation
Analysis of background gamma lines observed in the experiments with 1-10 MeV neutrons, 8: 19170 (RA:SU:In Russian)
Fast Fission
Measurements of fission cross sections around 14 MeV, 8: 19189 (RA:SU:In Russian)
Fission
Asymmetrically deformed states of ^{231}Th, ^{232}Th, ^{233}Th during the fission process, 8: 19186 (R:FR)
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Group Constants
Program complex for preparing of neutron constants on the base of evaluated data for Monte-Carlo calculations, 8: 19229 (RA:SU:In Russian)
Inelastic Scattering
Fast-neutron scattering cross sections of elemental zirconium, 8: 19167 (R:US)
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{115}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)
Study on the ^{175}Lu in (n, n'γ) reaction, 8: 19177 (RA:SU:In Russian)
Taking account of finite geometry effects in epxerimental studies of the (n,n'γ) reactions, 8: 19157 (RA:SU:In Russian)
Knock-Out Reactions
Study on the ^{77}Se(n,α)^{74}Ge and ^{146}Nd(N,α)^{143}Ce reactions on resonance neutrons, 8: 19165 (R:XJ:In Russian)
Nuclear Potential
Generalized optical potentials of light particle interaction with 1p shell nuclei, 8: 19149 (RA:SU:In Russian)
Pickup Reactions
Compact analytical representation of the ENDF/B-V evaluated cross sections for the ^{6}Li(n,α), ^{10}B(n,α$_0$), ^{10}B(n,α$_1$), ^{10}B(n,α) reactions, 8: 19148 (RA:SU:In Russian)
Experimental determination of the cross sections of the n-^{3}He-system in the energy range of 1 to 40 MeV, 8: 19141 (R:DE:In German)
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Potential Scattering
Parameters of iodine and cesium neutron resonances in 20-250 eV range, 8: 19173 (R:XJ:In Russian)
Quasi-Elastic Scattering
Derivation of the generalized frequency spectra of moderator atom oscillation from experimental double differential scattering cross section of slow neutrons, 8: 19235 (RA:SU:In Russian)
Evaluation of the (n,2n), (n,3n) reaction cross sections on heavy nuclei with account for nonequilibrium processes, 8: 19190 (RA:SU:In Russian)
Scattering
Invariant form of generating matrix elements of the problem of resonating group method examplified by the system ^{13}C + n, 8: 19153 (R:UA:In Russian)
Thermal Fission
Data estimated from the prompt neutron spectra of ^{233}U, ^{235}U, ^{239}Pu, ^{252}Cf fission, 8: 19188 (RA:SU:In Russian)
Total Cross Sections
Experimental determination of the cross sections of the n-^{3}He-system in the energy range of 1 to 40 MeV, 8: 19141 (R:DE:In German)
Fast-neutron total and elastic-scattering cross sections of elemental indium, 8: 19168 (R:US)
Total neutron cross section distribution density, 8: 19228 (RA:SU:In Russian)
NEUTRON SOURCE FACILITIES
Operation
RTNS-II irradiations and operations, 8: 19309 (RA:US)
Vacuum Furnaces
Dual-temperature vacuum-insulated furnace system, 8: 19310 (RA:US)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Helium release from tritium occluders in Zetatron tubes, 8: 18498 (R:US)

Fabrication
Electroforming cylindrical parts with precision small-inside-diameter pinholes, 8: 17475 (R:US)
Images
Electroforming cylindrical parts with precision small-inside-diameter pinholes, 8: 17475 (R:US)
Targets
Two-layer targets for the D-D reaction, 8: 19231 (RA:SU:In Russian)

NEUTRON SPECTROMETERS
Activation Detectors
Computerized gamma spectrum analysis with application to multicomponent activation detectors, 8: 18539 (R:FI)
Design
Improvement of methods for neutron spectrometry, 8: 18552 (BA:XE)

NEUTRON-DEFICIENT ISOTOPES
Alpha Decay
Alpha-decay half-lives of neutron-deficient trans-tin isotopes, 8: 19175 (R:RO)
Nuclear Structure
Structure of nuclei far from beta stability. Progress report, May 15, 1982-May 14, 1983, 8: 19181 (R:US)

NEUTRON-RICH ISOTOPES
Neutron Reactions
Neutron cross section calculations for neutron-rich nuclei, 8: 19199 (RA:SU:In Russian)
Nuclear Structure
Structure of nuclei far from beta stability. Progress report, May 15, 1982-May 14, 1983, 8: 19181 (R:US)
OBE Model
Neutron cross section calculations for neutron-rich nuclei, 8: 19199 (RA:SU:In Russian)

NEUTRONS
See also FAST NEUTRONS
THERMAL NEUTRONS
Cross Sections
Underlying parameters in dosimetry, 8: 19250 (BA:XE)
Kerma
Kerma-factor in neutron interaction with ^{7}Li, 8: 19236 (RA:SU:In Russian)
LET
Microdosimetric and EPR-investigations of energy transfer and induction mechanisms of radiation damage using model substances and human lymphocytes together with studies of special types of radiation induced biological damage in lymphocytes, 8: 18872 (BA:XE)
Microdosimetric studies relevant to radiation protection, 8: 18875 (BA:XE)
Microdosimetry
Biological effects of incorporated isotopes and radiation of high ionization density, 8: 18873 (BA:XE)
RBE
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
Radiation-induced chromosome aberrations, 8: 18897 (BA:XE)

NEVADA
Alluvial Deposits
Tephrostratigraphy and potassium-argon age determinations of seven volcanic ash layers in the Muddy Creek formation of southern Nevada, 8: 19004 (R:US)
Radiation Monitoring
Community Radiation Monitoring Program annual report, January 1, 1981-November 30, 1982, 8: 18695 (R:US)
Stratigraphy
Revised volcanic stratigraphy of drill hole J-13, Fortymile Wash, Nevada, based on petrographic modes and chemistry of phenocrysts, 8: 19006 (R:US)

NEVADA TEST SITE
Natural Gas Wells
High-energy gas-fracturing development. Annual report, April 1981-March 1982, 8: 17284 (R:US)
Radiation Monitoring
Animal investigation program 1980 annual report: Nevada Test Site and vicinity, 8: 18723 (R:US)
Seismology
Three-dimensional modeling of the Nevada Test Site and vicinity from teleseismic p-wave residuals, 8: 19013 (R:US)
Spent Fuel Storage
Test completion plan for Spent Fuel Test - Climax, Nevada Test Site, 8: 17343 (R:US)
Thermal calculations for the design, construction, operation, and evaluation of the Spent Fuel Test - Climax, Nevada Test Site, 8: 17342 (R:US)

NEW ENGLAND
See FEDERAL REGION I

NEW HAMPSHIRE
CAT Scanning
Computed tomographic scanning in New Hampshire, 8: 18829 (R:US)
Electric Utilities
Public Utility Commission manual for Section 210 of PURPA for New Hampshire, 8: 18102 (R:US)

NEW MEXICO
Geology
Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8: 17410 (R:US)
Basic data report for drillhole ERDA 9 (Waste Isolation Pilot Plant WIPP), 8: 17411 (R:US)
Lithology
Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8: 17410 (R:US)
Basic data report for drillhole ERDA 9 (Waste Isolation Pilot Plant WIPP), 8: 17411 (R:US)
Oil Fields
Improvement of water injectivity in the Hobbs (Grayburg-San Andres) field. Final report, 8: 17215 (R:US)
Radioactive Waste Disposal
Risk and safety analysis for disposal or alpha-contaminated waste in WIPP, 8: 17442 (RA:US)
Salt Deposits
Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8: 17410 (R:US)
Creep testing of salt: procedures, problems and suggestions, 8: 19017 (R:US)

NEW YORK
Acid Rain
Evaluation of limestone neutralization of acidic Adirondack surface waters, 8: 18750 (R:US)
Air Quality
Radiochemical measurements for evaluating air quality in the vicinity of low-level waste burial sites - the West Valley experience, 8: 17428 (RA:US)
Combustion
Feasibility study for resource recovery: southwest Brooklyn incinerator. Final report, 8: 17517 (R:US)
Electric Utilities
Developer handbook for Section 210 of PURPA for New York, 8: 18090 (R:US)
Energy Source Development
Design study for a regional energy development corporation. Final report, 8: 18037 (R:US)
Radioactive Waste Facilities
Radiochemical measurements for evaluating air quality in the vicinity of low-level waste burial sites - the West Valley experience, 8: 17428 (RA:US)
Solar Ponds
Potential for salt-gradient solar ponds in New York state. Final report, 8: 17685 (R:US)
Water Pollution Control
Evaluation of limestone neutralization of acidic Adirondack surface waters, 8: 18750 (R:US)

NICKEL
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Catalytic Effects
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982

(Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

Charged-Particle Transport
Stopping power of Ni, Ag, Au and Pb for ~ 7 MeV/n α-particles and carbon ions (Z_1^3 proportional deviation from the Bethe formula), 8: 19212 (RA:US)

Electrodeposition
Method for producing highly reflective metal surfaces, 8: 18423 (P:US)

Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)

Oxidation
Fundamental studies of high-temperature-corrosion reactions. Technical progress report, 8: 18248 (R:US)

Photoacoustic Spectroscopy
Photoacoustic spectroscopy of chemically modified surfaces. Doctoral thesis, 8: 18306 (R:US)

Physical Radiation Effects
Effect of irradiation on phosphorus segregation, 8: 18266 (R:US)

Pollution Sources
Preliminary air pollution survey of nickel and its compounds: a literature review, 8: 18641 (R:US)

Screen Printing
Development of technique for AR coating and nickel and copper metallization of solar cells. Final report, 8: 17544 (R:US)

Sorptive Properties
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

Surface Coating
Kinetics and morphology of the oxide growth by oxidation of NiAl coatings on nickel, 8: 18259 (R:US)

Toxicity
Preliminary air pollution survey of nickel and its compounds: a literature review, 8: 18641 (R:US)

X-Ray Fluorescence Analysis
^{71}Ge ring source for X-ray fluorescent analysis, 8: 18315 (R:XJ:In Russian)
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)

NICKEL 58 TARGET

Alpha Reactions
Experimental evidence for giant multipole resonances at high excitation energies, 8: 19180 (R:FR)

Proton Reactions
Proton and neutron yields from nuclei and from separated nickel and tin isotopes, 8: 19084 (R:SU:In Russian)

NICKEL 60

High Spin States
E3 transition connecting two high-spin states in ^{60}Ni, 8: 19164 (R:FR)

NICKEL 64 TARGET

Proton Reactions
Proton and neutron yields from nuclei and from separated nickel and tin isotopes, 8: 19084 (R:SU:In Russian)

NICKEL 68

Energy Levels
Magic features of ^{68}Ni, 8: 19163 (R:FR)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
STELLITE 6

Aging
Aging response of a welded iron-based superalloy (JBK-75 (Fe-28 Ni-15 Cr-2 Ti-1 Mo)), 8: 18258 (R:US)

Creep
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)

Heat Treatments
Method for heat treating iron-nickel-chromium alloy, 8: 18270 (P:US)

Microstructure
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)

Oxidation
Kinetics and morphology of the oxide growth by oxidation of NiAl coatings on nickel, 8: 18259 (R:US)

Swelling
Dependence of swelling of Fe-Ni-Cr alloys on chromium and nickel content, 8: 19320 (RA:US)

NICKEL BASE ALLOYS
See also TRIBALOY 700

Dehydridation
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)

Hydridation
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)

Materials Testing
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)

Microstructure
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)

Sealing Materials
Glass ceramic-to-metal seals, 8: 18287 (P:US)

Sorptive Properties
Hydrides of $CeNi_5$, $MmNi_5$, $Ca_{0.2}(Ce_{0.65}Mm_{0.35})_{0.8}Ni_5$, $Ca_{0.2}Ce_{0.8}Ni_5$, $Ca_{0.2}Mm_{0.8}Ni_5$, and mixed $CeNi_5/MmNi_5$, 8: 17486 (R:US)

Work Functions
Effective work function determination of selected superalloys, 8: 18251 (R:US)

NICKEL COMPOUNDS

Pollution Sources
Preliminary air pollution survey of nickel and its compounds: a literature review, 8: 18641 (R:US)

Toxicity
Preliminary air pollution survey of nickel and its compounds: a literature review, 8: 18641 (R:US)

NICKEL-CADMIUM BATTERIES

Manuals
The NASA standard 20 ampere hour nickel-cadmium battery manual, 8: 17976 (R:US)

Performance
Evaluation of batteries used in sampling pumps. Final report, 8: 17979 (R:US)

Performance Testing
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells, 8: 17977 (R:US)

NICKEL-ZINC BATTERIES

Battery Separators
Development of improved separators for alkaline zinc batteries, 8: 17978 (R:US)

NIGERIA

Oil Sand Deposits
Prospects for the development and production of heavy crude oil reserves in Nigeria, 8: 17204 (BA:US)

Petroleum Deposits
Prospects for the development and production of heavy crude oil reserves in Nigeria, 8: 17204 (BA:US)

NIMONIC PE16
Microstructure
Development of anisotropic distributions of network dislocation burgers vectors in alloys irradiated under stress, 8: 19314 (RA:US)
NINE MILE POINT-1 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Nine Mile Point and Fitzpatrick case study. Technical report 1 Oct 78-4 Jan 82, 8: 17877 (R:US)
NIOBIUM 95
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
NIOBIUM ALLOYS
See also INCONEL 718
NIOBIUM BASE ALLOYS
Extrusion
Extrusion-formed uranium-2.4 wt. % article with decreased linear thermal expansion and method for making the same, 8: 18269 (P:US)
Fabrication
Manufacture and evaluation of Nb_3Sn conductors fabricated by the MJR method, 8: 18412 (R:US)
NIOBIUM BASE ALLOYS
Physical Radiation Effects
Irradiation effects for in-situ composite conductors (Nb_3Sm-Cu), 8: 18244 (R:US)
Radiation damage in refractory metals and alloys on their base, 8: 18265 (R:SU:In Russian)
NIOBIUM COMPOUNDS
See also NIOBIUM FLUORIDES
Chemical Preparation
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Chemical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Physical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
NIOBIUM FLUORIDES
Chemical Preparation
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Chemical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Physical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
NIOBIUM IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s^{2}3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
NITINOL HEAT ENGINES
Couplings
Helix coupling, 8: 18484 (P:US)
NITRATES
Monitoring
Quality Assurance in Support of Energy Related Monitoring Activities: annual report No. 3, 8: 18636 (R:US)
NITRIC OXIDE
NO.
Atmospheric Chemistry
Cloudwater acidity measurements and formation mechanisms: experimental design, 8: 18588 (R:US)
Chemical Reactions
Kinetic measurements for the reaction of NH_2 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)
Monitoring
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)
Removal
Process for treating nitrogen oxides in exhaust gases, 8: 18685 (TG:US)
NITRILES
See also ACETONITRILE
Physical Radiation Effects
Disorder and conductivity of organic metals, 8: 18364 (R:FR:In French)
Prediction of stress relaxation under multiaxial stresses. Application to the reactor pressure vessel steel A533B, 8: 18268 (R:SE)
NITRO COMPOUNDS
See also METRONIDAZOLE
Biological Effects
Radiation- and drug-induced DNA repair in mammalian oocytes, 8: 18954 (BA:US)
NITROGEN
Adsorption
Process for producing oxygen (Japanese patent), 8: 18326 (TG:US)
Chemical Reaction Yield
Kinetic measurements for the reaction of NH_2 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)
Molecule-Molecule Collisions
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8: 19051 (R:US)
Thermal Conductivity
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
Thermal Diffusion
Comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture, 8: 18347 (D:US)
NITROGEN 13
Labelled Compounds
Cyclotron production of molecules labelled with short-lived radioisotopes β^+ emitters (^{15}O, ^{13}N, ^{11}C) and their clinical uses, 8: 18377 (R:FR:In French)
NITROGEN DIOXIDE
NO_2.
Air Pollution Control
Technical basis for developing control strategies for high ambient concentrations of nitrogen dioxide, 8: 18630 (R:US)
Atmospheric Chemistry
Cloudwater acidity measurements and formation mechanisms: experimental design, 8: 18588 (R:US)
Measurement and analysis of the evolution of the ^{85}Kr activity in the atmosphere, and study of the synergistic effect of ^{85}Kr and chemical pollution, 8: 18701 (BA:XE)
Chemical Reaction Kinetics
Kinetics of oxidation of aqueous sulfur(IV) by nitrogen dioxide, 8: 18587 (R:US)
Studies of combustion kinetics and mechanisms. Progress report, January 1, 1982-December 31, 1982, 8: 18386 (R:US)
Health Hazards
Evaluation of CHESS: Utah asthma study, 1971-1972. Final report, 8: 18601 (R:US)
Indoor Air Pollution
Indoor air pollution: an emerging health problem, 8: 18959 (R:US)
Inhalation
Respiratory toxicology following inhalation of NO/sub x/, 8: 18970 (R:US)
Monitoring
Maps depicting nonattainment areas pursuant to Section 107 of the Clean Air Act - 1982, 8: 18618 (R:US)
Quality Assurance in Support of Energy Related Monitoring Activities: annual report No. 3, 8: 18636 (R:US)
Removal
Process for treating nitrogen oxides in exhaust gases, 8: 18685 (TG:US)
NITROGEN IONS
Effective Charge
Effective charge of energetic ions in metals, 8: 19223 (RA:US)
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)
Energy Losses
Anomalies in the thickness dependence of the energy loss of helium and nitrogen ions in very thin carbon foils, 8: 19219 (RA:US)

Stopping Power
Effective charge of low-velocity nitrogen, neon and argon ions in carbon, aluminum and gold, 8: 19224 (RA:US)

Air Pollution
State-of-the-art combustion modification NOx control for stationary combustion equipment, 8: 17109 (R:US)

Air Pollution Abatement
Application of advanced combustion modifications to industrial process equipment: subscale test results. Final report Jul 77-Oct 78, 8: 17232 (R:US)

Air Pollution Control
Acid rain: control strategies for coal-fired utility boilers. Volume I, 8: 17103 (R:US)
Application of advanced combustion modifications to industrial process equipment: subscale test results. Final report Jul 77-Oct 78, 8: 17232 (R:US)
Costs of sulfur dioxide, particulate matter, and nitrogen oxide controls on fossil fuel fired industrial boilers. Final report, 8: 18482 (R:US)
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8: 17750 (R:US)
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Hitachi zosen nox flue gas treatment process. volume 1. pilot plant evaluation. Final report may 78-feb 82, 8: 17774 (R:US)
NO/sub x/ emissions from pulverized-coal arch-fired boilers. Final report, 8: 17106 (R:US)
Performance modeling of advanced gas burner systems. Annual report may 81-jun 82, 8: 18479 (R:US)
Pollution atmospherique: techniques de controle des emissions d'oxyde d'azote en sources fixes (air pollution: control techniques for nitrogen oxide emissions from stationary sources), 8: 18658 (R:US)
Shell NO/sub x//SO_2 flue gas treatment process: independent evaluation. Final report Feb 80-Feb 82, 8: 18483 (R:US)

Biological Effects
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)

Economic Impact
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)

Emission
NO/sub x/ emissions from pulverized-coal arch-fired boilers. Final report, 8: 17106 (R:US)

Monitoring
National air pollutant emission estimates, 1970-1978. Final report, 8: 18623 (R:US)
NO/sub x/ emissions from pulverized-coal arch-fired boilers. Final report, 8: 17106 (R:US)

Removal
Ferrite catalyst (Japanese patent), 8: 17118 (TG:US)
Process for treatment of waste gas containing nitrogen oxides (Japanese patent), 8: 17119 (TG:US)
Process for treating nitrogen oxides in exhaust gases, 8: 18685 (TG:US)

Toxicity
Respiratory toxicology following inhalation of NO/sub x/, 8: 18970 (R:US)

2-NITROINIDAZOLE
See MISONIDAZOLE

NITROSO COMPOUNDS

Mutagenesis
Cell-cycle patterns of mutation induction and their relationship to DNA repair, 8: 18960 (R:US)

NITROUS OXIDE
N_2O.

Monitoring
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)

NMR
See NUCLEAR MAGNETIC RESONANCE

NMR SPECTROMETERS
NMR parallel Q-meter with double-balanced-mixer detection for polarized target experiments, 8: 18495 (R:US)

Data Processing
Spectra identification and interpretation comparing the spectral informations - the example of infrared, C^{13} magnetic resonance and mass spectroscopy, 8: 18255 (R:DE:In German)

UPSHOT PROJECT
Data Acquisition
Ready II damage estimation system, NORAD Report Handler. Final report, 8: 18577 (R:US)
Ready II damage estimation system: Build Gazetteer program. Final report, 8: 18581 (R:US)
Electromagnetic Pulses
Aurora flash x-ray facility as a source-region emp simulator, 8: 18572 (R:US)
Environmental Impacts
The residual radiation pattern for various surface wind velocities - underwater atomic burst, 8: 18568 (R:US)
Fallout
Ready II damage estimation system: fallout radiation levels program. Final report, 8: 18578 (R:US)
Ready II damage estimation system: observations program. Final report, 8: 18579 (R:US)
Ready II damage estimation system: fallout trajectories program. Final report, 8: 18580 (R:US)
Fallout Deposits
Calculation of the concentration of any radionuclide deposited on the ground by offsite fallout from a nuclear detonation (Nevada test site shots), 8: 18727 (J:GB)
Fires
Experimental extinguishment of fires by blast. Final report, 8: 18574 (R:US)
Radiation Dose Distributions
Residual ionizing radiation depth dose measurements in unit-density material, 8: 18564 (R:US)
Radiation Hazards
Effects of atomic explosions on field medical installations equipment, 8: 18567 (R:US)
Shock Waves
Ready II damage estimation system: observations program. Final report, 8: 18579 (R:US)
Thermal Radiation
Effects of geometry on flash thermal damage, 8: 18566 (R:US)
Incendiary effects on building and interior kindling fuels, 8: 18565 (R:US)
NUCLEAR EXPLOSIVES
Testing
Little Feller I, Test Group Director's Concept. Extracted version, 8: 18576 (R:US)

RADIOACTIVE WASTE FACILITIES
Inspection
Licensee contractor and vendor inspection status report: quarterly report, April 1982-June 1982, 8: 17859 (R:US)
Legal Aspects
Enforcement actions: significant actions resolved. Quarterly progress report, October-December 1982, 8: 17867 (R:US)
Licensee Event Report (LER) compilation for month of December 1982, 8: 17871 (R:US)
NRC regulatory agenda. Quarterly report, September-December 1982, 8: 17866 (R:US)
Regulatory analysis guidelines of the United States Nuclear Regulatory Commission, 8: 17870 (R:US)
Report to Congress on abnormal occurrences, July-September 1982, 8: 17860 (R:US)
Summary information report, 8: 17865 (R:US)
Title list of documents made publicly available, October 1-31, 1982, 8: 17861 (R:US)
Occupational Safety
Lost-to-follow-up bias in an occupational mortality analysis: a quantitative consideration, 8: 18862 (R:US)
Overview of industries policies and practices on fertile female and ionizing radiation, 8: 17450 (R:US)
Personnel Monitoring
United States Transuranium Registry summary report, July 1, 1974 to October 1, 1975 to ERDA Division of Biomedical and Environmental Research, 8: 18859 (R:US)
Planning
Summary information report, 8: 17865 (R:US)
Research Programs
Small-Business Innovation Research Program: program solicitation FY 1983. Closing date: June 3, 1983, 8: 17468 (R:US)
Ventilation Systems
System operational testing of major ventilation systems for a plutonium recovery facility, 8: 17335 (R:US)
NUCLEAR FUELS
See also SPENT FUELS
Inspection
Pellet inspection apparatus (Patent), 8: 17328 (P:US)
Transport
Transportation risks in the US nuclear fuel cycle, 8: 17448 (R:US)
NUCLEAR INDUSTRY
Planning
PRC's nuclear program: a status report, 8: 17794 (J:US)
NUCLEAR MAGNETIC RESONANCE
Diagnostic Techniques
Medical applications of stable isotopes: mass spectroscopy and nuclear magnetic resonance, 8: 18826 (R:US)
NUCLEAR MATERIALS MANAGEMENT
Accounting
Discussion of "Statistical methods for nuclear-materials safeguards", 8: 17470 (R:US)

Alarm Systems
Assessment method to predict the rate of unresolved false alarms, 8: 17469 (R:US)
Safeguards
Inspection of the safeguards, security, and safety of special nuclear materials, 8: 17465 (R:US)
NUCLEAR MATTER
Anomalons, honey, and glue in nuclear collisions, 8: 19204 (R:US)
NUCLEAR MEDICINE
Images
2-D fitting and interpolation applied to image-distortion analysis, 8: 18825 (R:US)
Radiation Doses
Exposure to radiation from medical diagnostic procedures general description of work carried out from 1976 to 1980, 8: 18948 (BA:XE)
NUCLEAR PARKS
Cooling Towers
Study of a conceptual nuclear-energy center at Green River, Utah: potential alternative heat-rejection systems, 8: 17808 (R:US)
Environmental Impacts
Study of a conceptual nuclear energy center at Green River, Utah: licensing considerations, 8: 17885 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: water allocation issues, 8: 17908 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: regional considerations, 8: 17907 (R:US)
Feasibility Studies
Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8: 17842 (R:US)
Reactor Licensing
Study of a conceptual nuclear energy center at Green River, Utah: licensing considerations, 8: 17885 (R:US)
Reactor Sites
Study of a conceptual nuclear-energy center at Green River, Utah: site-specific transportation, 8: 17807 (R:US)
Study of a conceptual nuclear-energy center at Green River, Utah: potential alternative heat-rejection systems, 8: 17808 (R:US)
Site Selection
Environmental resources and potential impacts for a nuclear energy center near Green River, Utah. Volume II. Maps, 8: 18732 (R:US)
Waste Heat Utilization
Survey of potential process-heat and reject-heat utilization at a Green River nuclear-energy center, 8: 17809 (R:US)
NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Coordinated Research Programs
Nuclear physics division, 8: 19134 (RA:FR:In French)
Data Tagging
Standardization of data for basic and applied nuclear physics, 8: 19131 (R:US)
Research Programs
Progress report of the Nuclear Physics Department (1.10.1980-30.9.1981), 8: 19132 (R:FR:In French)
Scientific report 1981, 8: 19133 (R:DE)
NUCLEAR POWER
Economics
Nuclear power and the economic interests of consumers, 8: 18041 (B:GB)
Energy Policy
Institute for Energy Analysis research report 1982, 8: 18805 (R:US)
Public Opinion
Study on students' beliefs about nuclear power, 8: 18004 (R:PH)
Research Programs
PRC's nuclear program: a status report, 8: 17794 (J:US)
NUCLEAR POWER PLANTS
Circulating Systems
Thermo- and fluiddynamical behaviour of loop systems under pressure relief, 8: 17760 (R:DE:In German)
Containment Shells
Automobile impact forces on concrete wall panels. Technical report, 8: 17950 (R:US)
Cost
Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8: 17842 (R:US)
Dams
NRC inventory of dams, 8: 17904 (R:US)
Decommissioning
Health physics and industrial hygiene aspects of decontamination as a precursor to decontamination, 8: 17919 (R:US)
Decontamination
Health physics and industrial hygiene aspects of decontamination as a precursor to decontamination, 8: 17919 (R:US)
Design
Feasibility for quantitative assessment of available margins inherent in flood protection of nuclear plants. Final report, 8: 18741 (R:US)
Tornado damage risk assessment, 8: 18590 (R:US)
Documentation
World list of nuclear power plants, 8: 17793 (J:US)
Emergency Plans
Clarification of TMI action plan requirements. Requirements for emergency response capability, 8: 17863 (R:US)
Nuclear power plant emergency warning: how would the public respond, 8: 17964 (J:US)
Environmental Effects
Effects of thermal pollution of a nuclear power plant on aquatic organisms (macroinvertebrates and fishes of the River Meuse, 8: 18789 (BA:XE)
Investigation for the evaluation of the impact of nuclear plants discharges in the marine environment, under the environmental and health protection standpoints, 8: 18777 (BA:XE)
Environmental Impacts
Application of fisheries-management techniques to assessing impacts, 8: 17906 (R:US)
Evaluation of simulation models in power plant impact assessment: a case study using Lake Keowee, 8: 17905 (R:US)
NRC inventory of dams, 8: 17904 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: licensing considerations, 8: 17885 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: water allocation issues, 8: 17908 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: regional considerations, 8: 17907 (R:US)
Fission Product Release
Release of activity and occupational exposure of the nuclear power industry. Quarterly report, 4th quarter 1981, 8: 17909 (R:SE:In Swedish)
Health Hazards
Impacts on human health from the coal and nuclear fuel cycles and other technologies associated with electric power generation and transmission, 8: 17444 (R:US)
Inspection
Licensee contractor and vendor inspection status report: quarterly report, April 1982-June 1982, 8: 17859 (R:US)
Legal Aspects
Reducing the cost of administrative justice, 8: 17886 (J:US)
Meltdown
Lapse of the release of radioactivity on postulated cases of core meltdown reactor accidents at Swedish boiling water reactors. Stage I. Final report, 8: 17963 (R:SE:In Swedish)
Occupational Safety
Actions being taken to help reduce occupational radiation exposure at commercial nuclear powerplants, 8: 17938 (R:US)
Performance
Worldwide nuclear plant performance. Occasional paper series, 8: 17792 (R:US)
Planning
PRC's nuclear program: a status report, 8: 17794 (J:US)

Public Opinion
Nuclear power plant emergency warning: how would the public respond, 8: 17964 (J:US)
Nuclear safety and public acceptance, 8: 17965 (J:US)
Radiation Hazards
Cytogenetic researches on circulating lymphocytes of subjects professionally exposed to the hazard of ionizing radiation in a nuclear power plant station of Enel, 8: 18940 (BA:XE)
Radiation Protection
Nuclear power plant emergency warning: how would the public respond, 8: 17964 (J:US)
Radioactive Effluents
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
Reactor Accidents
Nature of reactor accidents, 8: 17945 (R:CA)
Reactor Licensing
Reducing the cost of administrative justice, 8: 17886 (J:US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), January 1-January 31, 1983, 8: 17862 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: licensing considerations, 8: 17885 (R:US)
Reactor Safety
Nuclear safety and public acceptance, 8: 17965 (J:US)
Probabilistic risk assessment and licensing, 8: 17959 (R:US)
Reactor Sites
Study of a conceptual nuclear energy center at Green River, Utah: water allocation issues, 8: 17908 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8: 17842 (R:US)
Research Programs
Small-Business Innovation Research Program: program solicitation FY 1983. Closing date: June 3, 1983, 8: 17468 (R:US)
Risk Assessment
Nuclear reactors: How safe are they, 8: 17960 (R:US)
Probabilistic risk assessment and licensing, 8: 17959 (R:US)
Radiological safety and risk assessment, 8: 18865 (R:US)
Site Selection
Image analysis for facility siting: a comparison of low- and high-altitude image interpretability for land use/land cover mapping, 8: 18731 (R:US)
Socio-Economic Factors
Sociological impacts of nuclear generating stations - summary report on the NRC post-licensing studies. Final report 1 Oct 78-4 Jan 82, 8: 17884 (R:US)
Specifications
Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8: 17842 (R:US)
Thermal Effluents
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data, 8: 18781 (R:BR:In several languages)
Transients
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes, 8: 17944 (R:GB)

OIL SAND DEPOSITS
Energy Source Development
Oil shale and oil sand in Zaire, 8: 17297 (BA:US)
Prospects for the development and production of heavy crude oil reserves in Nigeria, 8: 17204 (BA:US)
Evaluation
Oil shale and oil sand in Zaire, 8: 17297 (BA:US)
Well Spacing
Mine-assisted in situ project: an update (Alberta, Canada), 8: 17303 (BA:US)
OIL SAND OILS
See BITUMENS
OIL SANDS
Electric Heating
Energy production by electrical induction heating, 8: 17078 (BA:US)
In-Situ Gasification
Toxicity studies of underground coal gasification and tarsands processes. Progress report, February 1, 1982-January 31, 1983, 8: 17192 (R:US)
In-Situ Processing
Current in situ oil sands pilot projects in Alberta, Canada, 8: 17302 (BA:US)
Steam Injection
Current in situ oil sands pilot projects in Alberta, Canada, 8: 17302 (BA:US)
Mine-assisted in situ project: an update (Alberta, Canada), 8: 17303 (BA:US)

OIL SHALE DEPOSITS
Resource Assessment
Reassessment of oil shale prospects, 8: 17295 (BA:US)
OIL SHALE INDUSTRY
Economic Analysis
Oil shales energy source development. Final report, 8: 17299 (R:US)
Environmental Impacts
Health and environmental effects document for oil shale - 1982, 8: 17305 (R:US)
Oil shales energy source development. Final report, 8: 17299 (R:US)
Shale oil, water, and the politics of ambiguity, 8: 17308 (R:US)
Health Hazards
Health and environmental effects document for oil shale - 1982, 8: 17305 (R:US)
Water Requirements
Shale oil, water, and the politics of ambiguity, 8: 17308 (R:US)
OIL SHALE MINING
Occupational Diseases
Health and environmental effects document for oil shale - 1982, 8: 17305 (R:US)
OIL SHALE PROCESSING PLANTS
Air Pollution Abatement
Control of sulfur emissions from oil shale retorts. Final report Jul 79-Jul 80, 8: 17306 (R:US)
Air Pollution Control
Control of sulfur emissions from oil shale retorts. Final report Jul 79-Jul 80, 8: 17306 (R:US)
Environmental Impacts
Spring and springbrook fauna of the Piceance Basin, Colorado, 8: 17307 (R:US)
Occupational Diseases
Health and environmental effects document for oil shale - 1982, 8: 17305 (R:US)
OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER
OIL SHALES
See also BLACK SHALES
Chemical Analysis
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)
Fluidized-Bed Combustion
Fluidized bed combustion of oil shale, 8: 17304 (R:IL:In English and Hebrew)
Government Policies
Shale oil, water, and the politics of ambiguity, 8: 17308 (R:US)
In-Situ Retorting
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)
Modified in situ oil shale retorting, 8: 17301 (BA:US)
Oxy Modified In-Situ Process
Instrumentation and data analysis from Occidental retorts MR-3 and MR-4, 8: 17300 (R:US)
Reserves
Characteristics of oil shales and bituminous rocks of the USSR, 8: 17296 (BA:US)
Resource Development

Retorting
Oil shales energy source development. Final report, 8: 17299 (R:US)
OIL SPILL FINGERPRINTING
See OIL SPILLS
OIL SPILLS
Chemical Analysis
Identification of oil spills at sea: development of a system for the identification of oil spills. Technical report, 8: 17241 (R:US)
Diffusion
A theoretical appraisal of the joint effects of turbulence and of langmuir circulations on the dispersion of oil spilled in the sea. Final report, 8: 17233 (R:US)
Economic Analysis
Ixtoc I oil spill economic impact study. Volume III. input-output model for economic analysis: instruction manual. Final report, 8: 17239 (R:US)
Economic Impact
Ixtoc I oil spill economic impact study. Volume I. Final report, 8: 17237 (R:US)
Ixtoc I oil spill economic impact study. Volume II. executive summary. Final report, 8: 17238 (R:US)
Ixtoc I oil spill economic impact study. Volume III. input-output model for economic analysis: instruction manual. Final report, 8: 17239 (R:US)
Environmental Impacts
Oil spill combat: damage assessment using multiattribute utility analysis. Final report, 8: 17242 (R:US)
The IXTOC I oil spill: the Federal Scientific Response. Special report, 8: 18758 (R:US)
Environmental Transport
Processes which influence the motions and characteristics of oil at sea, 8: 17243 (R:US)
Evaporation
Processes which influence the motions and characteristics of oil at sea, 8: 17243 (R:US)
Pattern Recognition
Identification of oil spills at sea: development of a system for the identification of oil spills. Technical report, 8: 17241 (R:US)
Photochemical Reactions
Processes which influence the motions and characteristics of oil at sea, 8: 17243 (R:US)
Photomicrography
Apparatus and procedure for determining oil droplet size distribution. Final report jun 78-nov 80, 8: 18753 (R:US)
Spatial Distribution
A theoretical appraisal of the joint effects of turbulence and of langmuir circulations on the dispersion of oil spilled in the sea. Final report, 8: 17233 (R:US)
OIL WELLS
Electric Heating
Energy production by electrical induction heating, 8: 17078 (BA:US)
Fluid Injection
Analysis of unit mobility ratio well-to-well tracer flow to determine reservoir heterogeneity, 8: 17214 (R:US)
Steam Injection
Thermal efficiency of a steam injection test well with insulated tubing, 8: 17217 (R:US)
Venezuela's heavy oil development prospects and plans, 8: 17218 (BA:US)
Waterflooding
Evaluation of the North Stanley Polymer Demonstration Project (Tertiary oil recovery; polymer-enhanced waterflooding; Oklahoma), 8: 17212 (R:US)
Improvement of water injectivity in the Hobbs (Grayburg-San Andres) field. Final report, 8: 17215 (R:US)
Well Completion
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Well Drilling
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Static slot testing of conventional lost circulation materials, 8: 17719 (R:US)
Well Logging
Magnetic resonance apparatus (Patent), 8: 17208 (P:US)
OIL-FILLED CABLES
Design
HPOF transmission-system economic-evaluation program. Final report, 8: 17783 (R:US)
Economic Analysis
HPOF transmission-system economic-evaluation program. Final report, 8: 17783 (R:US)
OILS

OSMOSIS
Genetic Control
Genetic engineering for fuels and chemicals: a proline-overproducing plasmid which confers osmotic tolerance to fermentations, 8: 17506 (RA:US)
OSTEOSARCOMAS
Radioinduction
Experimental study of the occurence and properties of C-type retroviruses in radiation-induced osteosarcomas in mice, 8: 18858 (R:DE:In German)
Experiments on long term effects (bone carcinogenesis) induced by plutonmium in mice, 8: 18934 (BA:XE)
Pathogenesis of radiation-induced osteosarcomas, 8: 18857 (R:DE:In German)
OUTER CONTINENTAL SHELF
See CONTINENTAL SHELF
OVARIES
Radiosensitivity
Radiation sensitivity of the human ovary, 8: 18899 (BA:XE)
OWNERSHIP
Economic Impact
Changing ownership within the US minerals industry: possible causes and steps needed to determine the effects, 8: 18072 (R:US)
OXAZOLES
Radiolysis
Observation of short-lived radical ion pairs by pulse radiolysis of alkane solutions by time-resolved fluorescence-detected magnetic resonance. Electron paramagnetic resonance spectra of alkane radical cations, 8: 18369 (J:US)
OXOPROPANE
See ACETONE
OXY MODIFIED IN-SITU PROCESS
Before March 7, 1977 GARRETT PROCESS was used for this process.
Data Analysis
Instrumentation and data analysis from Occidental retorts MR-3 and MR-4, 8: 17300 (R:US)
OXYFLUORIDES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Preparation
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Chemical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
Physical Properties
Fluoride and oxyfluoride compounds of niobium, antimony and tellurium, 8: 18332 (R:FR:In French)
OXYGEN
Adsorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)

Chemical Reaction Kinetics
Rates of reactions of O(³P) with benzene and toluene, 8: 18353 (J:US)
Rates of reactions of O(³P) with xylenes, 8: 18354 (J:US)
Compression
Final report on the testing of the Mannesmann Demag oxygen compressor, 8: 18397 (R:US)
Desorption
Fundamental study of catalysts using laser Raman, infrared, Auger electron spectroscopy and low energy electron diffraction. Progress report (Carbon monoxide methanation with nickel catalyst), 8: 17016 (R:US)
Fundamental study of catalysts using laser Raman, infrared, auger electron spectroscopy and low energy electron diffraction. Progress report, April 1981-November 1982 (Carbon monoxide methanation with nickel catalyst), 8: 17018 (R:US)
Low Energy Electron Diffraction (LEED), Auger Electron Spectroscopy (AES), Thermal Desorption (TD) Electron Spectroscopy for Chemical Analysis (ESCA) studies. Summary of progress, July 1979-March 1981, 8: 17017 (R:US)
Electron-Molecule Collisions
Electron excitation of O_2 metastables in O_2-N_2 mixtures and of free-free radiation in argon. Final report oct 80-sep 81, 8: 19050 (R:US)
Excited States
Effects of singlet oxygen enzymatically generated on DNA, 8: 18813 (RA:BR:In Portuguese)
Phase Diagrams
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8: 17327 (R:US)
Photolysis
Rates of reactions of O(³P) with xylenes, 8: 18354 (J:US)
Production
Thermochemical hydrogen production. Volume 1: Program summary. Final report Jan 72-Dec 80, 8: 17480 (R:US)
Thermochemical hydrogen production. Volume 2: Appendix A. Cycle status summaries. Final report Jan 72-Dec 80, 8: 17481 (R:US)
Thermochemical hydrogen production. Volume 4: Appendix C. Impacts of materials development for thermochemical water-splitting processes. Final report Jan 72-Dec 80, 8: 17483 (R:US)
Separation Processes
Process for producing oxygen (Japanese patent), 8: 18326 (TG:US)
Thermochemical Processes
Thermochemical hydrogen production. Volume 3: Appendix B. Discussion of experimental and design work. Final report Jan 72-Dec 80, 8: 17482 (R:US)

OXYGEN 15
Labelled Compounds
Cyclotron production of molecules labelled with short-lived radioisotopes β^+ emitters (^{15}O, ^{13}N, ^{11}C) and their clinical uses, 8: 18377 (R:FR:In French)

OXYGEN 16
Binding Energy
Hartree-Fock problem for Skyrme interaction. Fundamental description for double magic nuclei, 8: 19195 (R:IT:IT)
Nuclear Radii
Hartree-Fock problem for Skyrme interaction. Fundamental description for double magic nuclei, 8: 19195 (R:IT:IT)

OXYGEN 16 REACTIONS
Charge-Exchange Reactions
Charge-exchange products of BEVALAC projectiles, 8: 19143 (R:US)
Fusion Reactions
Fusion measurements in light- and medium-mass heavy-ion reactions. Progress report, June 1, 1982-May 31, 1983, 8: 19147 (R:US)
Momentum Transfer
Charge-exchange products of BEVALAC projectiles, 8: 19143 (R:US)

OXYGEN 18 REACTIONS
Fusion Reactions
Fusion measurements in light- and medium-mass heavy-ion reactions. Progress report, June 1, 1982-May 31, 1983, 8: 19147 (R:US)

OZONE
Air Pollution Control
Comparison of three ozone models: urban airshed, City-specific EKMA and proportional Rollback. Final report, 8: 18629 (R:US)
Point and area source checklist for evaluating 1982 ozone SIP emission inventories, 8: 18642 (R:US)
Biological Effects
Microanalysis of ozone depression of motor activity (Rats), 8: 18988 (J:US)
Environmental Impacts
Energy impact assessment for alternative levels of the national ambient air quality standard for ozone (draft), 8: 18628 (R:US)
Information Systems
DMSP/MFR total ozone and radiance data base, 8: 18596 (R:US)
Meteorology
DMSP/MFR total ozone and radiance data base, 8: 18596 (R:US)
Monitoring
Evaluation of the empirical kinetics modeling approach, 8: 18612 (R:US)
Maps depicting nonattainment areas pursuant to Section 107 of the Clean Air Act - 1982, 8: 18618 (R:US)
Photolysis
Rates of reactions of O(³P) with benzene and toluene, 8: 18353 (J:US)

P

P INVARIANCE
Weak Neutral Currents
Parity-violating weak neutral current effects in elastic e-^{12}C scattering. Progress report, March 1, 1982-December 31, 1982, 8: 19118 (R:US)

PACIFIC GAS DIABLO CANYON-1 REACTOR
See DIABLO CANYON-1 REACTOR

PACKAGING
Design
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8: 17408 (R:US)
Design of a nuclear-waste package for emplacement in tuff, 8: 17419 (R:US)
Materials Testing
Packing material testing required to demonstrate compliance with 1000-year radionuclide containment. Semiannual report on waste package verification tests, 8: 17392 (R:US)

PAH
See POLYCYCLIC AROMATIC HYDROCARBONS

PALLADIUM
Catalytic Effects
Synthesis and characterization of structured interfaces for hydrogen generation. Study of an N,N'-dialkyl-4,4'-bipyridinium redox polymer/palladium catalyst system, 8: 17485 (J:US)
Proton Transport
Stopping powers of Zr, Pd, Cd, In and Pb for 6.5 MeV protons and mean excitation energies, 8: 19208 (RA:US)
Synthesis
Synthesis and characterization of structured interfaces for hydrogen generation. Study of an N,N'-dialkyl-4,4'-

bipyridinium redox polymer/palladium catalyst system, 8: 17485 (J:US)
PALLADIUM HYDRIDES
Crystal Structure
Hydrogen mobility at high concentrations, 8: 18288 (BA:US)
PAPAIN
Code number 3.4.22.2.
Radioimmunoassay
Determination of low papain concentrations in beer, 8: 18311 (RA:CS:In Czech)
PAPER INDUSTRY
Chemical Effluents
Biological characteristics of pulp mill effluents. Part 1. Progress report to March 31, 1978, 8: 18972 (R:CA)
Energy Consumption
Industrial energy productivity project: the pulp and paper industry. Final report, 8: 18182 (R:US)
Heat Pumps
Air circuit with heat pump, 8: 18200 (TG:US)
Pollution Abatement
Biological characteristics of pulp mill effluents. Part 1. Progress report to March 31, 1978, 8: 18972 (R:CA)
Productivity
Industrial energy productivity project: the pulp and paper industry. Final report, 8: 18182 (R:US)
PARABOLIC DISH COLLECTORS

Aerodynamics
Turbulent transfer processes to a surface and interaction with vegetation, 8: 18689 (BA:US)
Air Pollution Control
Costs of sulfur dioxide, particulate matter, and nitrogen oxide controls on fossil fuel fired industrial boilers. Final report, 8: 18482 (R:US)
Design and development of a high temperature low emissions combustor for stationary gas turbines, 8: 17750 (R:US)
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Feasibility of water injection for particulate removal in large turbocharged diesel engines. Open file report Dec 79-May 81, 8: 18232 (R:US)
Air-Water Interactions
Transfer and deposition of particles to water surfaces, 8: 18690 (BA:US)
Deposition
Transfer and deposition of particles to water surfaces, 8: 18690 (BA:US)
Environmental Transport
Resuspension and dry deposition research needs, 8: 18684 (R:US)
Gas Turbines
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Health Hazards
Evaluation of CHESS: Utah asthma study, 1971-1972. Final report, 8: 18601 (R:US)
Lung Clearance
Deposition and clearance of inhaled particles in the human respiratory tract, 8: 18847 (BA:XE)
Monitoring
National air pollutant emission estimates, 1970-1978. Final report, 8: 18623 (R:US)
PASSIVE SOLAR COOLING SYSTEMS
Meetings
US Department of Energy passive and hybrid solar energy program update, 8: 17649 (R:US)
Research Programs
Solar-energy program, FY 1981. Chapter from the Energy and Environment Division annual report, 8: 17662 (R:US)
PASSIVE SOLAR HEATING SYSTEMS
See also DIRECT GAIN SYSTEMS
TROMBE WALLS
Design
Low-cost passive solar demonstration project, 8: 17670 (R:US)
Meetings
US Department of Energy passive and hybrid solar energy program update, 8: 17649 (R:US)
Performance
Evaluation of passive-solar modular dwelling, June 30, 1980-August 30, 1981. Final report, 8: 17677 (R:US)
Research Programs
Solar-energy program, FY 1981. Chapter from the Energy and Environment Division annual report, 8: 17662 (R:US)
Specifications
Low-cost passive solar demonstration project, 8: 17670 (R:US)
PASSIVE SOLAR WATER HEATERS
Retrofitting
Arkansas solar-retrofit guide, 8: 17655 (R:US)
PATIENTS
Behavior
Evidence for a caudate role in aphasia from FDG positron emission tomography, 8: 18828 (R:US)
Radiation Doses
Exposure to radiation from medical diagnostic procedures, 8: 18949 (BA:XE)
PAULI EXCLUSION PRINCIPLE
See PAULI PRINCIPLE
PAULI PRINCIPLE
Further studies on the recently proposed experimental test of Pauli's exclusion principle for the strong interactions, 8: 19113 (J:US)
Need of subjecting to an experimental verification the validity within a hadron of Einstein's special relativity and Pauli's exclusion principle, 8: 19116 (J:US)
PCA-ORNL REACTOR
See ORNL-PCA REACTOR
PCB
See CHLORINATED AROMATIC HYDROCARBONS
PDX DEVICES
Getters
Reduction of recycling by pumping at the PDX limiter, 8: 19339 (R:US)
Limiters
Reduction of recycling by pumping at the PDX limiter, 8: 19339 (R:US)
Plasma Diamagnetism
Diamagnetic flux measurement using the PDX TF coils, 8: 19299 (R:US)

PEA PLANT
See PISUM
PEACH BOTTOM-2 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Peach Bottom case study. Technical report 1 Oct 78-4 Jan 82, 8: 17879 (R:US)
PEACH BOTTOM-3 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Peach Bottom case study. Technical report 1 Oct 78-4 Jan 82, 8: 17879 (R:US)
PEAT
Gasification
Feedstock characteristics and preparation for peat gasification. Volume I: tasks 8, 10, 11, and 12. Final report Jul 80-Jul 81, 8: 17062 (R:US)
Feedstock characteristics and preparation for peat gasification. Volume II: task 9. Final report Jul 80-Jul 81, 8: 17063 (R:US)
Feedstock characteristics and preparation for peat gasification. Volume III: task 13. Final report Jul 80-Jul 81, 8: 17064 (R:US)
Peat gasification for diesel generating stations, 8: 17080 (BA:US)
PEATLANDS

PEP STORAGE RINGS
Beam Monitors
Single turn integrator (Engineering Materials), 8: 18516 (E:US)
Electromagnets
PEP storage ring magnets and power supply system (Engineering Materials), 8: 18514 (E:US)
Klystrons
PEP bakeout oven: working drawing list (Engineering Materials), 8: 18515 (E:US)
Magnetic Fields
PEP ring quadrupole magnetic measurement equipment (Engineering Materials), 8: 18508 (E:US)
Power Supplies
PEP storage ring magnets and power supply system (Engineering Materials), 8: 18514 (E:US)
Radiation Detectors
Selected vacuum components of PEP experiment detectors (Engineering Materials), 8: 18505 (E:US)
Trigger Circuits
Three flavor beam trigger (Engineering Materials), 8: 18549 (E:US)
Vacuum Systems
PEP all metal isolation valve (Engineering Materials), 8: 18517 (E:US)
SLAP PEP bakeout hot water system (Engineering Materials), 8: 18518 (E:US)
Vacuum system for Mark II detector (Engineering Materials), 8: 18502 (E:US)
PERFORMANCE TESTING
Exhaust Gases
Determination of effects of ambient conditions on aircraft engine emissions: ALF 502 combustor rig testing and engine verification test. Final report Mar 76-Jan 77, 8: 18645 (R:US)
PERIOSTEUM
See BONE TISSUES
PERMEABILITY
Temperature Effects
Calcium influx into corn roots as a result of cold shock, 8: 18846 (J:US)
PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.
See also MEDICAL PERSONNEL
MILITARY PERSONNEL
Biological Radiation Effects
United States Transuranium Registry summary report, July 1, 1974 to October 1, 1975 to ERDA Division of Biomedical and Environmental Research, 8: 18859 (R:US)
Performance
Classification system for reporting events involving human malfunctions, 8: 17937 (R:XE)
Radiation Doses
Actions being taken to help reduce occupational radiation exposure at commercial nuclear powerplants, 8: 17938 (R:US)
Analysis of radiation exposure for troop observers, Exercise Desert Rock V, Operation Upshot-Knothole. Final report 1 Mar 80-28 Apr 81, 8: 18571 (R:US)
Release of activity and occupational exposure of the nuclear power industry. Quarterly report, 4th quarter 1981, 8: 17909 (R:SE:In Swedish)
Reliability
Classification system for reporting events involving human malfunctions, 8: 17937 (R:XE)
Training
Assessment of the National Program for Solar Heating and Cooling of Commercial Buildings, 8: 17656 (R:US)
PERSONNEL DOSIMETRY
Dosemeters
Wrist-watch dosimeter, 8: 18545 (P:US)
Electron Spin Resonance
Biologic dosimetry for nuclear environments by electron paramagnetic resonance (EPR) methods. Conference paper, 8: 18852 (R:US)
Neutron Detectors
Dosimetry of external radiation fields: development of monitoring systems, 8: 17452 (BA:XE)
Studies on new detectors useful for dosimetry, 8: 18551 (BA:XE)
Thermoluminescent Dosemeters
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
PERSONNEL FILM DOSIMETRY
See PERSONNEL DOSIMETRY
PERTURBATION THEORY
Perturbation theory for the multichannel problems, 8: 19201 (RA:SU:In Russian)
PEST CONTROL
Bio-Organic Division progress report, July 1977-1979, 8: 18811 (R:IN)
PESTICIDES
See also HERBICIDES
INSECTICIDES
Gas Chromatography
Pesticide content of human abdominal fat of Filipinos. Final report of Proj. PARC-ARC-IE 7201 Ch, 8: 18321 (R:PH)
PETROCHEMICAL FEEDSTOCKS
See CHEMICAL FEEDSTOCKS
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
Allocations
Measures of value in a linear-programming model of the US energy system, 8: 18050 (R:US)
Chemical Analysis
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)
Molecular characterization and fingerprinting of vanadyl porphyrin and non-porphyrin compounds in heavy crude petroleums using HPLC-GFAA analysis, 8: 17249 (R:US)

Chemical Composition
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8: 17213 (R:US)
Energy Consumption
Sixth annual statistical report 1977-1978 (OAPEC), 8: 17228 (R:KW)
Energy Demand
Secretary General's sixth annual report, 1399 H, 1979 AD, 8: 17227 (R:KW)
Enhanced Recovery
Enhanced oil recovery: application and future prospect, 8: 17205 (BA:US)
Liquid-fossil-fuel technology. Quarterly technical progress report, July-September 1982, 8: 17213 (R:US)
Role of microbiology in enhanced oil recovery, 8: 18076 (BA:US)
Exports
Sixth annual statistical report 1977-1978 (OAPEC), 8: 17228 (R:KW)
Hydraulic Transport
Complementary data systems: FRS involvement in oil pipeline companies. Final report, 8: 17247 (R:US)
Hydrogenation
Pre-feasibility study for construction of a commercial coal hydrogenation plant, 8: 17009 (R:DE:In German)
Market
Measures of value in a linear-programming model of the US energy system, 8: 18050 (R:US)
Particle Size
Apparatus and procedure for determining oil droplet size distribution. Final report jun 78-nov 80, 8: 18753 (R:US)
Prices
Determination of oil price in the International-Emergency Sharing System: an unresolved issue, 8: 18073 (R:US)
Secretary General's sixth annual report, 1399 H, 1979 AD, 8: 17227 (R:KW)
Production
Illinois energy production statistical report 1960-1979, 8: 18074 (R:US)
Secretary General's sixth annual report, 1399 H, 1979 AD, 8: 17227 (R:KW)
Sixth annual statistical report 1977-1978 (OAPEC), 8: 17228 (R:KW)
Reserves
Availability of heavy crudes in Latin America, 8: 17298 (BA:US)
Enhanced oil recovery: application and future prospect, 8: 17205 (BA:US)
Oil and gas from the Norwegian continental shelf, 8: 17203 (BA:US)
Outlook for conventional petroleum resources, 8: 17202 (BA:US)
Prospects for the development and production of heavy crude oil reserves in Nigeria, 8: 17204 (BA:US)
Secretary General's sixth annual report, 1399 H, 1979 AD, 8: 17227 (R:KW)
Speculations on oil and gas resources in small fields and unconventional deposits, 8: 17201 (BA:US)
Resource Assessment
Enhanced oil recovery: application and future prospect, 8: 17205 (BA:US)
Severance Tax
California oil severance tax: who gains. who pays, 8: 17229 (B:US)
Effects of a severance tax on oil produced in California, 8: 17230 (B:US)
Storage
Cost estimates for above-ground crude-oil storage with capacities of 30, 40, and 50 MM bbl, 8: 17251 (R:US)
Feasibility and cost of interim storage for the Strategic Petroleum Reserve, 8: 17252 (R:US)
Storage Facilities
Cost estimates for above-ground crude-oil storage with capacities of 30, 40, and 50 MM bbl, 8: 17251 (R:US)
Thermal Recovery
Venezuela's heavy oil development prospects and plans, 8: 17218 (BA:US)

PETROLEUM COKE
See COKE
PETROLEUM PRODUCTS
PETROLEUM DEPOSITS
Energy Source Development
Political and financial aspects (Switzerland), 8: 17246 (RA:DE:In German)
Prospects for the development and production of heavy crude oil reserves in Nigeria, 8: 17204 (BA:US)
Exploration
Coastal energy transportation study, phase ii, volume 1: a study of OCS onshore support bases and coal export terminals, 8: 17176 (R:US)
Exploration in developing countries, 8: 17211 (BA:US)
Secretary General's sixth annual report, 1399 H, 1979 AD, 8: 17227 (R:KW)
Some aspects of exploration planning for oil and natural gas in Mexico, 8: 17210 (BA:US)
Geological Surveys
Energy resources of the Denver and Cheyenne Basins, Colorado - resource characteristics, development potential, and environmental problems. Environmental Geology 12, 8: 18747 (R:US)
Geological aspects (Switzerland), 8: 17206 (RA:DE:In German)
Speculations on oil and gas resources in small fields and unconventional deposits (Worldwide resources), 8: 17201 (BA:US)
Geophysical Surveys
Present status of oil and gas from the ocean floor, 8: 17262 (BA:US)
Global Aspects
Outlook for conventional petroleum resources, 8: 17202 (BA:US)
Leases
Possible effects of increased royalty rate for federal onshore oil and gas leases, 8: 17225 (R:US)
Repeal of unneeded Outer Continental Shelf production rate-setting functions would cut costs, 8: 17224 (R:US)
PETROLEUM DISTILLATES
Boiling point range 0-600°C.
See also NAPHTHA
Aging
Nonstandard aging tests on coal-derived distillate fuels. Technical progress report, 7 July 1982-6 January 1983, 8: 17085 (R:US)
Chemical Composition
Nonstandard aging tests on coal-derived distillate fuels. Technical progress report, 7 July 1982-6 January 1983, 8: 17085 (R:US)
Density
Nonstandard aging tests on coal-derived distillate fuels. Technical progress report, 7 July 1982-6 January 1983, 8: 17085 (R:US)
Stability
Nonstandard aging tests on coal-derived distillate fuels. Technical progress report, 7 July 1982-6 January 1983, 8: 17085 (R:US)
PETROLEUM INDUSTRY
Current and future hydrocarbon exploitation in Mexico, 8: 17209 (BA:US)
Econometrics
Dynamic analyses of resource development and extraction, 8: 17220 (R:US)
Royalties
Possible effects of increased royalty rate for federal onshore oil and gas leases, 8: 17225 (R:US)
Technology Transfer
Energy development through industrial cooperation, 8: 18010 (BA:US)
PETROLEUM PRODUCTS

Production
Sixth annual statistical report 1977-1978 (OAPEC), 8: 17228 (R:KW)
Solvent Extraction
Process for removing halogenated aliphatic and aromatic compounds from petroleum products, 8: 18329 (P:US)

PETROLEUM REFINERIES
Air Pollution
Evaluation of the maintenance effect on fugitive emmissions from refineries in the South Coast Air Quality Management District. Final report Dec 80-Sep 81, 8: 17240 (R:US)
Air Pollution Monitors
A study to evaluate carbon monoxide and hydrogen sulfide continuous emission monitors at an oil refinery. Final report, 8: 18613 (R:US)
Entitlements Program
Entitlements exemptions for new refiners, 8: 17244 (R:US)
Environmental Impacts
Ecological monitoring of aqueous effluents from petroleum refineries, 8: 18764 (R:US)
Liquid Wastes
Ecological monitoring of aqueous effluents from petroleum refineries, 8: 18764 (R:US)

PETROLEUM RESIDUES
B.P. over 1100°F, 593°C; includes oil residues, residua.
Combustion Products
Combustion-turbine design guidelines based on deposition-corrosion considerations. Volume 1. Residual-fuel-oil studies. Final report, 8: 17254 (R:US)

PETT

Twenty-six-inch pipe NDE instrument surveillance test (PWR;BWR), 8: 17801 (R:US)
Thermal Insulation
Thermal efficiency of a steam injection test well with insulated tubing, 8: 17217 (R:US)

PISUM
Radionuclide Kinetics
Translocation of radionuclides absorbed by the roots (redistribution) and subsequent release from leaves into the atmosphere (biological resuspension), 8: 18879 (BA:XE)

PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS

PLANNED COMMUNITIES
Synopses of Swedish building research, number 4, May 1982, 8: 18154 (R:US)
Synopses of Swedish building research, number 3, April 1982, 8: 18155 (R:US)

PLANNING
Projected design of plants or equipment as well as projected human efforts.
Mathematical Models
Simplified algorithms for computing dynamic solutions to multi-regional planning models. Technical report SOL 81-2, 8: 17989 (R:US)

PLANT BREEDING
Bio-Organic Division progress report, July 1977-1979, 8: 18811 (R:IN)

PLANT CELLS
Cell Cultures
Heliosynthesis: a solar biotechnology based on direct bioconversion of solar energy by photosynthetic cells, 8: 17584 (RA:US)
Enzyme Activity
Effect of SO_2 on light modulation of plant metabolism. Progress report, June 1, 1982-May 31, 1983, 8: 18824 (R:US)
Genetic Radiation Effects
Detection and assessment of biological effects of high natural radioactivity. Final report, 8: 18898 (BA:XE)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Radiosensitivity
Genetical and biochemical analysis of the radiosensitivity of eukaryotic cells, 8: 18909 (BA:XE)

Chemical Analysis
Bio-Organic Division progress report, July 1977-1979, 8: 18811 (R:IN)
Genetic Radiation Effects
Detection and assessment of biological effects of high natural radioactivity. Final report, 8: 18898 (BA:XE)
Maintenance
Management of transmission line rights-of-way for fish and wildlife. Volume 1: background information. Final report, 8: 18995 (R:US)
Productivity
A conceptual model of primary productivity in shallow streams using biomass simulation. Technical completion report, 8: 18756 (R:US)
Radioactivity
Plutonium in the Rhine-Meuse-Scheldt delta; analysis of estuarine sediment, salt-marsh soil and vegetation samples, 8: 18780 (BA:XE)
Radionuclide Kinetics
Iodine uptake by plant roots with special reference to I-129 in the environment, 8: 18728 (BA:XE)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Root Absorption
Investigation of Great Basin big sagebrush and black greasewood as biogeochemical indicators of uranium mineralization. Final report. National Uranium Resource Evaluation, 8: 19021 (R:US)
Tissue Cultures
Bio-Organic Division progress report, July 1977-1979, 8: 18811 (R:IN)

PLASMA
See also LASER-PRODUCED PLASMA
Budgets
Experimental plasma research project summaries, 8: 19284 (R:US)
Computer Networks
Magnetic fusion energy and computers. The role of computing in magnetic fusion energy research and development (second edition), 8: 19321 (R:US)
Thermonuclear Ignition
Plasma fluctuations and confinement of fusion reaction products, 8: 19352 (J:US)
Turbulence
Ion-cyclotron turbulence and diagonal double layers in a magnetospheric plasma, 8: 19047 (R:US)

PLASMA ACCELERATION
Acceleration of magnetized plasma rings, 8: 19301 (R:US)

PLASMA DIAGNOSTICS
Budgets
Experimental plasma research project summaries, 8: 19284 (R:US)
Laser Radiation
High-energy D_2O submillimeter laser for plasma diagnostics, 8: 19295 (R:US)

PLASMA DIAMAGNETISM
Diamagnetic flux measurement using the PDX TF coils, 8: 19299 (R:US)

PLASMA FILAMENT
Instability Growth Rates
Temporal growth rate of filamentation instability in a strongly ionised magnetoplasma, 8: 19303 (J:GB)

Parametric Instabilities
Temporal growth rate of filamentation instability in a strongly ionised magnetoplasma, 8: 19303 (J:GB)

PLASMA INSTABILITY
Research Programs
Theory of waves, instabilities and transport in thermonuclear plasmas. Final report, 8: 19289 (R:US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA PRODUCTION
Preliminary observations of electrostatic end plugging in tandem cusp experiments, 8: 19306 (J:GB)

PLASMA WAVES
Research Programs
Theory of waves, instabilities and transport in thermonuclear plasmas. Final report, 8: 19289 (R:US)
Turbulence
Ion-cyclotron turbulence and diagonal double layers in a magnetospheric plasma, 8: 19047 (R:US)

PLASMINOGEN
Biological Functions
Pilot study of the role of plasminogen activating enzyme in strontium-90 induced tumors in mice, 8: 18943 (BA:XE)
Stimulation
Pilot study of the role of plasminogen activating enzyme in strontium-90 induced tumors in mice, 8: 18943 (BA:XE)

PLASTICS

POLYSTYRENE
TEFLON
Materials Testing
Solar energy systems: standards for screening plastic containment materials, 8: 17673 (R:US)

PLATES
Thicker than SHEETS or FOILS.
Metals
Automatic grinding apparatus to control uniform specimen thicknesses (Patent), 8: 18414 (P:US)
Thermal Conductivity
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat, 8: 17682 (R:BR:In several languages)

PLATINUM
Catalytic Effects
Heterogeneous catalysis on the molecular scale, 8: 18340 (J:US)
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Structural Chemical Analysis
Heterogeneous catalysis on the molecular scale, 8: 18340 (J:US)

PLESIOTHERAPY
See RADIOTHERAPY

PLT DEVICES
Current-Drive Heating
Lower-hybrid heating and current drive on PLT, 8: 19297 (R:US)
Energy-Level Transitions
Magnetic dipole lines in the 3s^{2}3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
Impurities
Magnetic dipole lines in the 3s^{2}3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)

PLUMES
Deposition
Dual tracer measurements of plume depletion, 8: 18682 (R:US)
Diffusion
Behavior of LNG vapor clouds: wind-tunnel tests on the modeling of heavy plume dispersion. Final report Jul 79-Sep 81, 8: 17275 (R:US)
Environmental Transport
Stack plume interaction and flow characteristics for a notched ridge. Final report, 8: 18616 (R:US)
Mathematical Models
Behaviour of buoyant plumes in neutral and stable conditions in Canada, 8: 18687 (B:CA)
Spatial Distribution
Dispersal of LNG vapor clouds with water spray curtains. Annual report on phase 1 (final) Dec 80-Dec 81, 8: 17276 (R:US)

PLUTONIUM
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Corrosion
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8: 17327 (R:US)
Dosimetry
Plutonium exposures in man. Direct monitoring of the lung and lung model assessments, 8: 18939 (BA:XE)
Fluorescence Spectroscopy
Ultratrace analysis of actinides via coprecipitation/laser-induced fluorescence spectroscopy, 8: 18325 (R:US)
Hydrolysis
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8: 17327 (R:US)
Leaching
Comparison of the leachability of three TRU cement waste forms, 8: 17403 (R:US)
Mass Spectroscopy
Ion source for high-precision mass spectrometry, 8: 18327 (P:US)
Particle Resuspension
Resuspension of particles from ground surfaces, 8: 18700 (BA:XE)
Phase Diagrams
Reaction of plutonium with water kinetic and equilibrium behavior of binary and ternary phases in the Pu + O + H system, 8: 17327 (R:US)
Processing
Present status and future direction of plutonium process chemistry, 8: 17337 (R:US)
Pyrochemical Reprocessing
Present status and future direction of plutonium process chemistry, 8: 17337 (R:US)
Review of plutonium process chemistry at Rocky Flats, 8: 17336 (R:US)
Radiation Monitoring
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Radiochemical Analysis
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Radionuclide Migration
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Recovery
Actinide chemistry research at Rocky Flats, 8: 18381 (R:US)
Present status and future direction of plutonium process chemistry, 8: 17337 (R:US)
Review of plutonium process chemistry at Rocky Flats, 8: 17336 (R:US)

PLUTONIUM 238
Radioecological Concentration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)
Radionuclide Migration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)

PLUTONIUM 238 TARGET
Neutron Reactions
Evaluation of 238 Pu neutron cross-sections in the energy range 10^{-5} eV to 3 MeV, 8: 19184 (R:FR)

PLUTONIUM 239
Delayed Neutron Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Dose-Response Relationships
Experiments on long term effects (bone carcinogenesis) induced by plutonmium in mice, 8: 18934 (BA:XE)
Dosimetry
Application to radiobiological problems of automated techniques for recognition of visual patterns, 8: 18937 (BA:XE)
Excretion
Movement of actinides in mammals, 8: 18932 (BA:XE)
Leaching
Leach tests of simulated low-level transuranic waste forms containing transuranic elements, 8: 17364 (R:US)
Microdosimetry
Microdosimetry of lung, 8: 18936 (BA:XE)
Nuclear Reaction Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Radioecological Concentration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)
Radioecological investigations of an environmental contamination with transuranic elements, 8: 18779 (BA:XE)
Radionuclide Migration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)
Retention
Radiation damage from inhaled particles in the rodent lung, 8: 18935 (BA:XE)
Tissue Distribution
Application to radiobiological problems of automated techniques for recognition of visual patterns, 8: 18937 (BA:XE)
Experiments on long term effects (bone carcinogenesis) induced by plutonmium in mice, 8: 18934 (BA:XE)

PLUTONIUM 239 TARGET
Neutron Reactions
Application of the coupled-channel optical model to the calculation of fast neutron cross sections on odd-A actinide nuclei, 8: 19187 (R:FR:In French)
Data estimated from the prompt neutron spectra of ^{233}U, ^{235}U, ^{239}Pu, ^{252}Cf fission, 8: 19188 (RA:SU:In Russian)
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)

PLUTONIUM 240
Nuclear Reaction Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Radioecological Concentration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)
Radioecological investigations of an environmental contamination with transuranic elements, 8: 18779 (BA:XE)
Radionuclide Migration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)

PLUTONIUM 241
Radioecological Concentration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)
Radionuclide Migration
Artificial radioactivity and marine environment: study of the transuranium elements ^{238}Pu, $^{239+240}$Pu, ^{241}Pu and ^{241}Am in the Mediterranean, 8: 18775 (TG:US)

PLUTONIUM 241 TARGET
Neutron Reactions
Review of 241 Pu resonance parameters, 8: 19185 (R:FR)

PLUTONIUM CARBIDES
Electric Conductivity
Analytical representation of the thermal conductivity and electrical resistivity of UC/sub 1 +- x/, PuC/sub 1-x/, and (U/sub y/Pu/sub 1-y/)C/sub 1 +- x/, 8: 18282 (R:US)
Thermal Conductivity
Analytical representation of the thermal conductivity and electrical resistivity of UC/sub 1 +- x/, PuC/sub 1-x/, and (U/sub y/Pu/sub 1-y/)C/sub 1 +- x/, 8: 18282 (R:US)

PLUTONIUM ISOTOPES
See also PLUTONIUM 238
PLUTONIUM 239
PLUTONIUM 240
PLUTONIUM 241
Neutron Reactions
Evaluation of the (n,2n), (n,3n) reaction cross sections on heavy nuclei with account for nonequilibrium processes, 8: 19190 (RA:SU:In Russian)

PLUTONIUM OXIDES
Excretion
Plutonium exposures in man. Direct monitoring of the lung and lung model assessments, 8: 18939 (BA:XE)

PLUTONIUM RECYCLE
Radiation Protection
Study on effect of multiple recycling of plutonium on problem pertaining to radiation protection in a mixed oxide fuel fabrication plant. Synthesis Report, 8: 17325 (R:XE)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNEUMATIC TRANSPORT
Flowmeters
Venturi design for metering solids flow in gas-solids suspensions. Final report, 8: 18448 (R:US)

POINT BEACH-1 REACTOR
Electrical Equipment
Technical evaluation report on the adequacy of station electric distribution system voltages for the Point Beach Nuclear Plant, Units 1 and 2. (Docket Nos. 50-266, 50-301), 8: 17843 (R:US)
Power Supplies
Technical evaluation report on the adequacy of station electric distribution system voltages for the Point Beach Nuclear Plant, Units 1 and 2. (Docket Nos. 50-266, 50-301), 8: 17843 (R:US)

POINT BEACH-2 REACTOR
Electrical Equipment
Technical evaluation report on the adequacy of station electric distribution system voltages for the Point Beach Nuclear Plant, Units 1 and 2. (Docket Nos. 50-266, 50-301), 8: 17843 (R:US)
Power Supplies
Technical evaluation report on the adequacy of station electric distribution system voltages for the Point Beach Nuclear Plant, Units 1 and 2. (Docket Nos. 50-266, 50-301), 8: 17843 (R:US)

POINT CONTACTS

Safety
Cost saving and safety issues in the Billings Area of the Western Area Power Administration, 8: 18079 (R:US)
Socio-Economic Factors
Ecuador rural electrification. Project impact evaluation report 21, 8: 18114 (R:US)
The product is progress: rural electrification in Costa Rica. Project impact evaluation No. 22, 8: 18115 (R:US)
Stability
Selective modal analysis in power systems. Final report, 8: 17782 (R:US)
Transients
Nuclear-plant response to grid electrical disturbances. Final report, 8: 17936 (R:US)

POWER TRANSMISSION LINES
Environmental Effects
Management of transmission line rights-of-way for fish and wildlife. Volume 3: Western United States. Final report, 8: 18997 (R:US)
Management of transmission line rights-of-way for fish and wildlife. Volume 2: Eastern United States. Final report, 8: 18996 (R:US)
Environmental Impacts
Environmental impact statement: Henry W. Pirkey Power Plant Unit-I/South Hallsville Surface Lignite Mine Project, Harrison County, Texas. Final report (draft), 8: 17776 (R:US)
Rights-of-Way
Management of transmission line rights-of-way for fish and wildlife. Volume 3: Western United States. Final report, 8: 18997 (R:US)
Management of transmission line rights-of-way for fish and wildlife. Volume 1: background information. Final report, 8: 18995 (R:US)
Management of transmission line rights-of-way for fish and wildlife. Volume 2: Eastern United States. Final report, 8: 18996 (R:US)

PREAMPLIFIERS
Maintenance
Testing and maintenance of semiconductor detector and preamplifier, 8: 18530 (RA:CS:In Czech)
Performance Testing
Testing and maintenance of semiconductor detector and preamplifier, 8: 18530 (RA:CS:In Czech)

PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS

PREDNISOLONE
Pharmacology
Autoradiographic investigations on the prednisolone-induced atrophy and on interdependent reactions in different lymphatic tissues of rabbit, 8: 18819 (R:DE:In German)

PRESSURE VESSELS
Annealing
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report (PWR; BWR), 8: 17796 (R:US)
Dynamic Loads
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-dimensional and 3-dimensional crack models (PWR;BWR), 8: 17804 (R:US)
Fracture Properties
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-

dimensional and 3-dimensional crack models (PWR;BWR), 8: 17804 (R:US)
Neutron Dosimetry
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8: 17803 (R:US)
Thermal Stresses
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-dimensional and 3-dimensional crack models (PWR;BWR), 8: 17804 (R:US)
Transport
Study of a conceptual nuclear-energy center at Green River, Utah: site-specific transportation, 8: 17807 (R:US)

PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS

PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS

PRIMARY COOLANT CIRCUITS
Activity Levels
BWR cobalt-source identification. Final report, 8: 17795 (R:US)
Boiling Detection
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report (PWR; BWR), 8: 17799 (R:US)
Corrosion Products
BWR cobalt-source identification. Final report, 8: 17795 (R:US)
Laboratory investigations of the behaviour of radioactive corrosion products in primary circuits of pressurized water reactors. Summary of results for the period 1973 to 1980, 8: 17845 (R:DD:In German)
Decontamination
Postaccident decontamination of reactor primary systems and test loops, 8: 17935 (R:US)
Hydraulics
Distribution of pressure acting on core barrel and caused by simultaneous operation of several circulating pumps, 8: 17846 (R:CS)
Hydrodynamics
Distribution of pressure acting on core barrel and caused by simultaneous operation of several circulating pumps, 8: 17846 (R:CS)
Nozzles
Effects of residual stress on the UT detectability of surface cracks in feedwater nozzles. Final report (BWR), 8: 17798 (R:US)
Pipes
Investigation of the conservatism associated with different combinations between primary and secondary piping responses (PWR;BWR), 8: 17806 (R:US)
Twenty-six-inch pipe NDE instrument surveillance test (PWR;BWR), 8: 17801 (R:US)
Pumps
Rice frequency as a parameter of mechanical vibrations of circulating pumps, 8: 17847 (R:CS)
Two-Phase Flow
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report (PWR; BWR), 8: 17799 (R:US)
Water Chemistry
BWR cobalt-source identification. Final report, 8: 17795 (R:US)

PRINCETON LARGE TORUS
See PLT DEVICES

PROBES
Electric Conductivity
Development of conductivity probe and temperature probe for in-situ measurements in hydrological studies, 8: 19005 (R:BR)
Temperature Measurement
Development of conductivity probe and temperature probe for in-situ measurements in hydrological studies, 8: 19005 (R:BR)

PROCESS CONTROL
Process design and control strategies for energy efficiency in the process industries. Progress report, April 1, 1980-December 31, 1982, 8: 18191 (R:US)

PROCESSING (DATA)
See DATA PROCESSING

PROCUREMENT
Economic Analysis
Uneconomical practices of the purchasing function at the Pittsburgh and Midway Coal Company, 8: 17199 (R:US)
Information Systems
Department of Energy's procurement information system: expectations have not been realized (PADS information system), 8: 19356 (R:US)

PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION

PRODUCTION (PLASMA)

Gas Flow
Mark III detector gas-system schematic (Engineering Materials), 8: 18550 (E:US)
Integrated Circuits
Detection electronics for proportional chambers, 8: 18535 (R:SU:In Russian)
Position Sensitive Detectors
High resolution x-ray gas proportional detectors with delay line position sensing for high counting rates, 8: 18542 (J:NL)
PROTACTINIUM
Solvent Extraction
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)
PROTACTINIUM 231
Purification
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)
Recovery
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)
PROTACTINIUM ISOTOPES
See also PROTACTINIUM 231
Neutron Reactions
Evaluation of the (n,2n), (n,3n) reaction cross sections on heavy nuclei with account for nonequilibrium processes, 8: 19190 (RA:SU:In Russian)
PROTECTION
See SAFETY
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE COATINGS
Corrosion Resistance
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines. final report, 8: 17758 (R:US)
PROTEINS
See also ALBUMINS
Bioconversion
Energy conversion by the retinal protein, bacteriorhodopsin, 8: 17561 (RA:US)
Biosynthesis
Environmental stress-mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 8: 18955 (R:US)
Radioimmunoassay
Replication of japanese encephalitis virus. Annual summary report no. 3, jul 80-sep 81, 8: 18810 (R:US)
Radiosensitivity Effects
Genetic effects of radiations and chemical carcinogens: molecular mechanisms common to DNA repair, recombination, mutagenesis and viral induction in bacteria and mammalian cells, 8: 18903 (BA:XE)
Solar Energy Conversion
Energy conversion by the retinal protein, bacteriorhodopsin, 8: 17561 (RA:US)
PROTON BEAMS
Radiation Transport
Microdosimetry and neutron dosime[illegible], 8: 19248 (BA:XE)
PROTON REACTIONS
Charge-Exchange Reactions
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{115}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)
Cross Sections
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Elastic Scattering
Correlation effect in the NN-interaction and pd-scattering, 8: 19140 (R:UA:In Russian)
Excitation Functions
Effect of properties of decay partial channels on structure of excitation functions of the sup(6, 7)Li(sup(1, 2, 3)H, Xγ) reactions, 8: 19151 (RA:SU:In Russian)
Knock-Out Reactions
Study on the (p,n) reaction on the molybdenum isotopes, 8: 19169 (R:SU:In Russian)
Nuclear Potential
Generalized optical potentials of light particle interaction with 1p shell nuclei, 8: 19149 (RA:SU:In Russian)
Particle Production
Proton and neutron yields from nuclei and from separated nickel and tin isotopes, 8: 19084 (R:SU:In Russian)
PROTON-ANTIPROTON INTERACTIONS
Particle Production
Charmonium spectroscopy at the CERN ISR using an antiproton beam and a hydrogen jet target, 8: 19093 (R:FR)
Photon Emission
Studies of the applicability of optoelectronic devices for instrumentation in high-energy physics. Progress report, June 1, 1982-May 31, 1983, 8: 19081 (R:US)
PROTON-PROTON INTERACTIONS
Elastic Scattering
Symmetry constraints in optimal polarization formalisms with an application to p-p scattering, 8: 19130 (R:US)
Photon Emission
Studies of the applicability of optoelectronic devices for instrumentation in high-energy physics. Progress report, June 1, 1982-May 31, 1983, 8: 19081 (R:US)
PROTONS
Quasi-Elastic Scattering
(p, 2p) reaction on the ^{6}Li nuclei at the 70 MeV incident protons, 8: 19150 (RA:SU:In Russian)
Stopping Power
Computer simulation of geometrical effects on the stopping power for 7 MeV protons, 8: 19210 (RA:US)
Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons, 8: 19209 (RA:US)
Stopping powers of Zr, Pd, Cd, In and Pb for 6.5 MeV protons and mean excitation energies, 8: 19208 (RA:US)
PROTOPLASTS
See PLANT CELLS
PSEUDOSCALAR MESONS
See also KAONS
PIONS
Particle Production
Observation of pion excited state- a new pseudoscalar meson, 8: 19090 (R:XJ:In Russian)
PSI RESONANCES
Radiative Decay
Observation of the radiative decay J/psi → γ eta ππ, 8: 19097 (R:US)
PUBLIC ATTITUDES

Power Systems
Nuclear-plant response to grid electrical disturbances. Final report, 8: 17936 (R:US)
Pressure Vessels
Applications of energy-release-rate techniques to part-through cracks in plates and cylinders. Volume 2. ORVIRT: a finite element program for energy release rate calculations for 2-dimensional and 3-dimensional crack models, 8: 17804 (R:US)
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8: 17796 (R:US)
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8: 17803 (R:US)
Study of a conceptual nuclear-energy center at Green River, Utah: site-specific transportation, 8: 17807 (R:US)
Primary Coolant Circuits
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report, 8: 17799 (R:US)
Investigation of the conservatism associated with different combinations between primary and secondary piping responses, 8: 17806 (R:US)
Laboratory investigations of the behaviour of radioactive corrosion products in primary circuits of pressurized water reactors. Summary of results for the period 1973 to 1980, 8: 17845 (R:DD:In German)
Postaccident decontamination of reactor primary systems and test loops, 8: 17935 (R:US)
Rice frequency as a parameter of mechanical vibrations of circulating pumps, 8: 17847 (R:CS)
Twenty-six-inch pipe NDE instrument surveillance test, 8: 17801 (R:US)
Reactor Accidents
Dose rate calculations inside the containment shell of a PWR in case of an accident, 8: 17916 (R:FR:In French)
Parametric study of CHF data. Volume 2. A generalized subchannel CHF correlation for PWR and BWR fuel assemblies. Final report, 8: 17930 (R:US)
Postaccident decontamination of reactor primary systems and test loops, 8: 17935 (R:US)
Severe Accident Risk Reduction Program, 8: 17962 (R:US)
Value-impact analysis of severe-accident prevention and mitigation systems, 8: 17961 (R:US)
Reactor Core Disruption
Comparison of selected risk contributions of an LMFBR and an LWR: Phase A. Final report, 8: 17931 (R:US)
Reactor Instrumentation
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report, 8: 17799 (R:US)
Rice frequency as a parameter of mechanical vibrations of circulating pumps, 8: 17847 (R:CS)
Reactor Licensing
Overview of DOE proposed loss-of-coolant accident (LOCA) rule-revision study, 8: 17921 (R:US)

Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), January 1-January 31, 1983, 8: 17862 (R:US)

Reactor Materials

BR-3 high burnup fuel rod hot cell program. Volume 1, 8: 17814 (R:US)

Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions, 8: 18262 (R:FI)

Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8: 17796 (R:US)

LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8: 17803 (R:US)

Twenty-six-inch pipe NDE instrument surveillance test, 8: 17801 (R:US)

Reactor Sites

Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8: 17842 (R:US)

Relief Valves

Application of RELAP5/MOD1 for calculation of safety and relief valve discharge piping hydrodynamic loads. Final report, 8: 17821 (R:US)

EPRI PWR Safety and Relief Value Test Program: safety and relief valve test report, 8: 17822 (R:US)

EPRI PWR Safety and Relief Valve Test Program: test condition justification report, 8: 17820 (R:US)

PWR safety and relief valve test program. Valve selection/juftification report. Final report, 8: 17817 (R:US)

Valve inlet fluid conditions for pressurizer safety and relief valves for B and W 177-FA and 205-FA plants. Final report, 8: 17819 (R:US)

Valve inlet fluid conditions for pressurizer safety and relief valves in combustion engineering-designed plants. Final report, 8: 17818 (R:US)

RHR Systems

Value-impact analysis of severe-accident prevention and mitigation systems, 8: 17961 (R:US)

Risk Assessment

Initial guidance on digraph-matrix analysis for systems interaction studies at selected LWR's, 8: 17953 (R:US)

Secondary Coolant Circuits

Investigation of the conservatism associated with different combinations between primary and secondary piping responses, 8: 17806 (R:US)

Monitoring system for determining air inleakage and oxygen concentrations in the secondary cycle of pressurized-water-reactor plants. Final report, 8: 17833 (R:US)

Specifications

Study of a conceptual nuclear energy center at Green River, Utah: general layout and design, 8: 17842 (R:US)

Steam Generators

Eddy-current inspection for steam-generator tubing program. Quarterly progress report for period ending September 30, 1982, 8: 17841 (R:US)

Eddy-current NDE for intergranular attack. Final report, 8: 17831 (R:US)

Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report, 8: 17830 (R:US)

Optical probe for steam-generator-tube dent measurement. Final report, 8: 17832 (R:US)

Prototype EMAT system for inspection of steam generator tubing. Final report, 8: 17825 (R:US)

Solid-state and solution chemistry in the study of metal oxides behavior in steam generators, 8: 17811 (R:IT:IT)

Steam generators: the effort to prevent tube deterioration, 8: 17848 (J:US)

Steam-generator support-plate radiographic evaluation system. Final report, 8: 17824 (R:US)

Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report, 8: 17826 (R:US)

Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report, 8: 17827 (R:US)

Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 3. Appendix T. Final report, 8: 17828 (R:US)

Steam Separators

Calibration of instrumented steam separators to determine quality and flow distribution in an operating steam generator. Final report, 8: 17823 (R:US)

Steam Turbines

Fire-retardant lubricant for turbine generators. Final report, 8: 17829 (R:US)

Full-scale turbine-missile-casing tests. Final report, 8: 17797 (R:US)

Thermal Pollution

Effects of thermal pollution of a nuclear power plant on aquatic organisms (macroinvertebrates and fishes of the River Meuse, 8: 18789 (BA:XE)

Thorium Cycle

Use of thorium as an alternative nuclear fuel, 8: 17887 (R:AU)

Turbogenerators

Fire-retardant lubricant for turbine generators. Final report, 8: 17829 (R:US)

Waste Heat Utilization

Survey of potential process-heat and reject-heat utilization at a Green River nuclear-energy center, 8: 17809 (R:US)

PYRIDINES

See also BIPYRIDINES

Binding Energy

Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Chemical Reactions

Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Thermal Conductivity

Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

PYROCATECHIN

See PYROCATECHOL

PYROCATECHOL

Chemical Reactions

Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)

PYROLYSIS

Chemical Reactors

Evaluation and test program of a 50-ton-per-day Lantz converter. First quarterly technical progress report, 8: 17489 (R:US)

Q

QATAR

Research Programs

Solar energy in the Arab world: policies and programs, 8: 17539 (R:KW)

Solar Energy

Solar energy in the Arab world: policies and programs, 8: 17539 (R:KW)

QUADRICYCLENE

Photolysis

Photosensitization of quadricyclene isomerization by electron acceptors. A short-circuit nonradiative decay mechanism for electron donor-acceptor quenching in polar media, 8: 18351 (J:US)

QUANTITATIVE CHEMICAL ANALYSIS

Fluorimeters

Fluorometric method of quantitative cell mutagenesis (Patent), 8: 18820 (P:US)

QUANTUM CHROMODYNAMICS
Gluons
OZI rule and glueballs, 8: 19110 (J:IT)
Lattice Field Theory
Prediction of low-lying oddballs in lattice QCD, 8: 19100 (R:DE)
Perturbation Theory
High energy processes in quantum chromodynamics, 8: 19123 (RA:SU:In Russian)
QUANTUM FIELD THEORY
See also QUANTUM CHROMODYNAMICS
Meetings
Charmed physics of the seventies, 8: 19125 (R:IN)
Space-Time
Some classes of test functions for local fields, 8: 19121 (R:RO)
QUANTUM MECHANICS
Lie Groups
Remarks on the problematic aspects of Heisenberg/Lie/symplectic formulations, 8: 19267 (J:US)
Sum Rules
Some properties of Borel summable functions, 8: 19272 (R:FR)
QUARK MODEL
Need of subjecting to an experimental verification the validity within a hadron of Einstein's special relativity and Pauli's exclusion principle, 8: 19116 (J:US)
QUARK-QUARK INTERACTIONS
Photon Emission
Studies of the applicability of optoelectronic devices for instrumentation in high-energy physics. Progress report, June 1, 1982-May 31, 1983, 8: 19081 (R:US)
QUARKS
Particle Models
Lepton and quark generations in the geometrical Rishon model, 8: 19107 (R:FR)
Rest Mass
Mass relations between quarks in grand unification, 8: 19127 (J:US)
QUARTZ
Sampling
Application of a stratified random sampling technique to the estimation and minimization of respirable quartz exposure to underground miners, 8: 17193 (R:CA)
QUINONES
Electronic Structure
Carbon-13 hyperfine constants, g factors, and electronic structure of m-benzosemiquinone radical anions, 8: 18371 (J:US)
Synthesis
Formation of aromatic and possible oligomeric materials from cellulose liquefaction, 8: 17580 (R:US)

R

R (EXPOSURE UNIT)
See RADIATION DOSE UNITS
RACIAL GROUPS
See MINORITY GROUPS
RAD

Long-term management USDOE transuranic waste, 8: 17405 (R:US)
Near-surface disposal of alpha-contaminated waste, 8: 17351 (RA:US)
Overview of 10 CFR Part 61, licensing requirements for land disposal of radioactive waste, 8: 17457 (RA:US)
Regulatory policy of the EPA related to alpha-contaminated waste, 8: 17456 (RA:US)
Review of risk assessments for defining the alpha-contaminated wastes, 8: 17437 (RA:US)
Risk and safety analyses for disposal of alpha-contaminated waste in INEL, 8: 17439 (RA:US)
Risk and safety analyses for disposal of alpha-contaminated waste at Los Alamos National Laboratory, 8: 17440 (RA:US)
Risk and safety analysis for disposal or alpha-contaminated waste in WIPP, 8: 17442 (RA:US)
Risks from principal components and their daughter products in alpha-contaminated waste, 8: 17435 (RA:US)
WIPP research and development program: providing the technical basis for defense waste disposal, 8: 17413 (R:US)
Concretes
Chemical interaction of clay buffer materials and concrete, 8: 17415 (R:SE)
Cost
Cost of implementing AECB interim criteria for the closeout of uranium tailings sites. A report prepared for the Atomic Energy Control Board, 8: 17366 (R:CA)
Cost Benefit Analysis
Cost-benefit analysis of alternatives for disposal of alpha-contaminated solid waste (Near-surface disposal), 8: 17356 (RA:US)
Greater confinement disposal methods and concepts, 8: 17353 (RA:US)
Dose Limits
Applications of models for disposal of alpha-contaminated waste, 8: 17436 (RA:US)
Environmental Impacts
Environmental information needed to license a low-level waste disposal facility, 8: 17389 (RA:US)
Marine distribution and behaviour of transuranic and fission product radionuclides, 8: 18778 (BA:XE)
Radiochemical measurements for evaluating air quality in the vicinity of low-level waste burial sites - the West Valley experience, 8: 17428 (RA:US)
Evaluation
Critical evaluation of the limits of alpha contamination in low-level waste, 8: 17355 (RA:US)
Geologic Deposits
Automated data acquisition and analysis system used in the Basalt Waste Isolation Project's Near-Surface Test Facility, 8: 17409 (R:US)
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8: 17408 (R:US)
Greater confinement disposal methods and concepts, 8: 17353 (RA:US)
Nuclear-waste repository in basalt, Project B-301: functional-design criteria, 8: 17406 (R:US)
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Ground Disposal
LASL experimental engineered waste burial facility: design considerations and preliminary plan (Shallow land burial), 8: 17423 (BA:US)

High-Level Radioactive Wastes
Analysis of space systems for the space disposal of nuclear waste follow-on study. Volume 1: executive summary. Final report, 8: 17372 (R:US)
Analysis of space systems for the space disposal of nuclear waste follow-on study. Volume 2: technical report. Final report, 8: 17373 (R:US)
Borehole-to-borehole geophysical methods applied to investigations of high level waste repository sites, 8: 17420 (R:US)
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8: 17408 (R:US)
Design of a nuclear-waste package for emplacement in tuff, 8: 17419 (R:US)
Legislative and political aspects of waste disposal, 8: 17453 (RA:US)
Legislative and political aspects of waste disposal, 8: 17454 (RA:US)
Legislative and political aspects of waste disposal, 8: 17455 (RA:US)
Packing material testing required to demonstrate compliance with 1000-year radionuclide containment. Semiannual report on waste package verification tests, 8: 17392 (R:US)
Regulatory policy of the EPA related to alpha-contaminated waste, 8: 17456 (RA:US)
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
WIPP research and development program: providing the technical basis for defense waste disposal, 8: 17413 (R:US)

Legislation
Alpha-contaminated waste management workshop, 8: 17345 (R:US)
Historical perspective, 8: 17459 (RA:US)
Impact of the legislation on electric utilities, 8: 17462 (RA:US)
Impact of the legislation on consumers, 8: 17463 (RA:US)
Implementing the legislation, 8: 17464 (RA:US)
Informatin report on state legislation, volume 8, number 8, 8: 17467 (R:US)

Risk and safety analysis for disposal or alpha-contaminated waste in WIPP, 8: 17442 (RA:US)
Risks from principal components and their daughter products in alpha-contaminated waste, 8: 17435 (RA:US)

Salt Deposits
Conclusions regarding geotechnical acceptability of the WIPP site, 8: 17414 (R:US)
Deep geologic disposal of alpha-contaminated waste in WIPP, 8: 17352 (RA:US)
Estimations of the rate of penetration of rock-salt by fresh water, 8: 17398 (R:US)
Impurities in rock-salt: consequences for the temperature increases at the disposal of high-level nuclear waste, 8: 17399 (R:US)
WIPP research and development program: providing the technical basis for defense waste disposal, 8: 17413 (R:US)

Simulation
Shallow-land burial of low-level radioactive wastes: preliminary simulations of long-term health risks (1000 year period), 8: 17434 (R:US)

Site Selection
Air quality measurements for site characterization, 8: 17427 (RA:US)
Borehole-to-borehole geophysical methods applied to investigations of high level waste repository sites, 8: 17420 (R:US)
Citizen participation in nuclear waste repository siting, 8: 17395 (R:US)
Directions in low-level radioactive waste management. The siting process: establishing a low-level waste-disposal facility, 8: 17360 (R:US)
Geological and geophysical techniques for development of siting and design parameters, 8: 17376 (RA:US)
Geological case history: lessons learned at Sheffield, Illinois, 8: 17378 (RA:US)
Geotechnical and geomechanical parameters required for characterization of sites, 8: 17379 (RA:US)
Geotechnical measurements at the Maxey Flats, Kentucky low-level radioactive waste disposal site - lessons learned, 8: 17381 (RA:US)
Ground water monitoring techniques for low-level radioactive disposal sites, 8: 17384 (RA:US)
Historical perspective on confirmatory data gathering, 8: 17377 (RA:US)
Hydrologic characterization of sites for shallow disposal of low-level radioactive wastes, 8: 17382 (RA:US)
Hydrologic and hydrodynamic aspects of low-level radioactive waste disposal to streams, 8: 17387 (RA:US)
Meteorology and climatology as parameters on low level waste disposal monitoring, 8: 17390 (RA:US)
On-site meteorological measurements for low-level radioactive waste disposal, 8: 17391 (RA:US)
Predictive geology in nuclear waste management, 8: 17416 (R:SE)
Surface water considerations for low-level radioactive waste site, 8: 17386 (RA:US)
Symposium on low-level waste disposal, 8: 17374 (R:US)
Variations of geomechanical properties, 8: 17380 (RA:US)

Site Surveys
Geological case history: lessons learned at Sheffield, Illinois, 8: 17378 (RA:US)
Geotechnical and geomechanical parameters required for characterization of sites, 8: 17379 (RA:US)
Hydrologic characterization of sites for shallow disposal of low-level radioactive wastes, 8: 17382 (RA:US)

Space
Analysis of space systems for the space disposal of nuclear waste follow-on study. Volume 1: executive summary. Final report, 8: 17372 (R:US)
Analysis of space systems for the space disposal of nuclear waste follow-on study. Volume 2: technical report. Final report, 8: 17373 (R:US)

Specifications
Analyses of the disposal of alpha-contaminated waste at Hanford, 8: 17441 (RA:US)

Spent Fuels
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8: 17408 (R:US)
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Systems Analysis
Analyses of the disposal of alpha-contaminated waste at Hanford, 8: 17441 (RA:US)

Technology Assessment
Foreign experience in alpha-contaminated waste disposal, 8: 17354 (RA:US)

Temperature Effects
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

Underground Disposal
Air quality measurements for site characterization, 8: 17427 (RA:US)
Critical evaluation of the limits of alpha contamination in low-level waste, 8: 17355 (RA:US)
Deep geologic disposal of alpha-contaminated waste in WIPP, 8: 17352 (RA:US)
Effect of releases from near-surface low-level waste sites on surface water quality, 8: 17388 (RA:US)
Environmental information needed to license a low-level waste disposal facility, 8: 17389 (RA:US)
Geological and geophysical techniques for development of siting and design parameters, 8: 17376 (RA:US)
Geotechnical and geomechanical parameters required for characterization of sites, 8: 17379 (RA:US)
Geotechnical measurements at the Maxey Flats, Kentucky low-level radioactive waste disposal site - lessons learned, 8: 17381 (RA:US)
Greater confinement disposal methods and concepts, 8: 17353 (RA:US)
Greater Confinement Disposal Test at the Nevada Test Site (At 30 meters), 8: 17358 (R:US)
Ground water monitoring techniques for low-level radioactive disposal sites, 8: 17384 (RA:US)
Historical perspective on confirmatory data gathering, 8: 17377 (RA:US)
Hydrologic characterization of sites for shallow disposal of low-level radioactive wastes, 8: 17382 (RA:US)
Hydrologic and hydrodynamic aspects of low-level radioactive waste disposal to streams, 8: 17387 (RA:US)
Lessons learned in a hydrogeological case at Sheffield, Illinois, 8: 17385 (RA:US)
Meteorology and climatology as parameters on low level waste disposal monitoring, 8: 17390 (RA:US)
Near-surface disposal of alpha-contaminated waste, 8: 17351 (RA:US)
Need for geological characterization of low-level nuclear waste disposal sites, 8: 17375 (RA:US)
On-site meteorological measurements for low-level radioactive waste disposal, 8: 17391 (RA:US)

Radiochemical measurements for evaluating air quality in the vicinity of low-level waste burial sites - the West Valley experience, 8: 17428 (RA:US)
Review of risk assessments for defining the alpha-contaminated wastes, 8: 17437 (RA:US)
Risk and safety analyses for disposal of alpha-contaminated waste in INEL, 8: 17439 (RA:US)
Risk and safety analyses for disposal of alpha-contaminated waste at Los Alamos National Laboratory, 8: 17440 (RA:US)
Surface water considerations for low-level radioactive waste site, 8: 17386 (RA:US)
Symposium on low-level waste disposal, 8: 17374 (R:US)
Techniques of groundwater investigation at proposed low-level nuclear waste disposal sites, 8: 17383 (RA:US)
Variations of geomechanical properties, 8: 17380 (RA:US)

RADIOACTIVE WASTE FACILITIES
WIPP research and development program: providing the technical basis for defense waste disposal, 8: 17413 (R:US)

Accidents
Effects of wire rope in a Waste Isolation Pilot Plant (WIPP) waste shaft accident, 8: 17412 (R:US)

Design
Geological and geophysical techniques for development of siting and design parameters, 8: 17376 (RA:US)
LASL experimental engineered waste burial facility: design considerations and preliminary plan (Shallow land burial), 8: 17423 (BA:US)
Nuclear-waste repository in basalt, Project B-301: functional-design criteria, 8: 17406 (R:US)
Variations of geomechanical properties, 8: 17380 (RA:US)

Environmental Impacts
Environmental information needed to license a low-level waste disposal facility, 8: 17389 (RA:US)

Hoists
Effects of wire rope in a Waste Isolation Pilot Plant (WIPP) waste shaft accident, 8: 17412 (R:US)

Licensing
Environmental information needed to license a low-level waste disposal facility, 8: 17389 (RA:US)

Measuring Instruments
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)

Pilot Plants
Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8: 17410 (R:US)
Basic data report for drillhole ERDA 9 (Waste Isolation Pilot Plant WIPP), 8: 17411 (R:US)
Deep geologic disposal of alpha-contaminated waste in WIPP, 8: 17352 (RA:US)

Site Selection
Directions in low-level radioactive waste management. The siting process: establishing a low-level waste-disposal facility, 8: 17360 (R:US)
Planned collecting site for low- and intermediate-level radioactive waste in Bavaria, 8: 17367 (R:DE:In German)

RADIOACTIVE WASTE MANAGEMENT
Historical overview (USA), 8: 17346 (RA:US)

Alpha-Bearing Wastes
Alpha-contaminated waste management workshop, 8: 17345 (R:US)
Alpha-contaminated waste from reprocessing of nuclear fuel, 8: 17350 (RA:US)
Detection and determination of alpha content of waste, 8: 17348 (RA:US)
Long-term management USDOE transuranic waste, 8: 17405 (R:US)
Physical description and quantities of alpha-contaminated waste from defense sources, 8: 17347 (RA:US)
Radiological hazards from alpha-contaminated waste, 8: 17349 (RA:US)

Bibliographies
Annotated bibliography of radioactive waste management publications at Pacific Northwest Laboratory, January 1978 through July 1982 (831 abstracts), 8: 17401 (R:US)

Liquid Wastes
Radioactive waste treatment, 8: 17369 (R:KR:In Korean)

Meetings
Alpha-contaminated waste management workshop, 8: 17345 (R:US)

Solid Wastes
Radioactive waste treatment, 8: 17369 (R:KR:In Korean)

RADIOACTIVE WASTE PROCESSING

Anaerobic Digestion
Anaerobic digestion of low-level radioactive cellulosic and animal wastes, 8: 17397 (R:US)

Cost
High-level nuclear-waste-immobilization program, 8: 17359 (R:US)

High-Level Radioactive Wastes
High-level nuclear-waste-immobilization program, 8: 17359 (R:US)

Liquid Wastes
Support of the radioactive waste treatment nuclear fuel fabrication facility, 8: 17368 (R:KR:In Korean)

Low-Level Radioactive Wastes
Anaerobic digestion of low-level radioactive cellulosic and animal wastes, 8: 17397 (R:US)

Plutonium
Removal of actinides from waste solutions by ferrite treatment (Adsorption onto the ferrite surface or chemical incorporation into ferrite molecules), 8: 17404 (R:US)

Solid Wastes
Support of the radioactive waste treatment nuclear fuel fabrication facility, 8: 17368 (R:KR:In Korean)

Solidification
High-level nuclear-waste-immobilization program, 8: 17359 (R:US)

Tritium
Investigations of titamium and zirconium hydrides to determine suitability of recoverable tritium immobilization for the Pickering tritium removal system, 8: 17394 (R:CA)

RADIOACTIVE WASTE STORAGE

Casks
Comparison of cask and dry well concepts for retrievable storage of high-level waste, 8: 17365 (R:US)

High-Level Radioactive Wastes
Comparison of cask and dry well concepts for retrievable storage of high-level waste, 8: 17365 (R:US)

Intermediate-Level Radioactive Wastes
Planned collecting site for low- and intermediate-level radioactive waste in Bavaria, 8: 17367 (R:DE:In German)

Low-Level Radioactive Wastes
Planned collecting site for low- and intermediate-level radioactive waste in Bavaria, 8: 17367 (R:DE:In German)

Salt Deposits
Geologic and well-construction data for the H-7 borehole complex near the proposed Waste Isolation Pilot Plant site, southeastern New Mexico. Water resources investigations, 8: 17400 (R:US)

Site Selection
Geologic and well-construction data for the H-7 borehole complex near the proposed Waste Isolation Pilot Plant site, southeastern New Mexico. Water resources investigations, 8: 17400 (R:US)

Tritium
Investigations of titamium and zirconium hydrides to determine suitability of recoverable tritium immobilization for the Pickering tritium removal system, 8: 17394 (R:CA)

Underground Storage
Comparison of cask and dry well concepts for retrievable storage of high-level waste, 8: 17365 (R:US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS

Transport
Transportation of radioactive material in Michigan. Final report Sep 80-Aug 81, 8: 19001 (R:US)
Transportation risks in the US nuclear fuel cycle, 8: 17448 (R:US)

RADIOACTIVITY
For measured values of radioactivity and for unidentified radiation sources; not for experimental studies.
See also NATURAL RADIOACTIVITY
Spatial Distribution
The residual radiation pattern for various surface wind velocities - underwater atomic burst, 8: 18568 (R:US)
RADIOAPPLICATORS
See RADIATION SOURCES
RADIOCARBON DATING

MEA
SEROTONIN
Side Effects
Histological investigations on the effect of zytostatica, ionizing radiation and a radioprotective substance on spleen, lung, lymphatic nodes, bone marrow, skin and muscles on rats under drugs suitable for gynecological cancer therapy, 8: 18860 (R:DE:In German)
Toxicity
Toxicity studies on antiradiation agents. Final report, 8: 18956 (R:US)
RADIORESISTANCE
See RADIOSENSITIVITY
RADIOSENSITIVITY
Age Dependence
Influence of ageing alterations on tumor development after beta-irradiation, 8: 18944 (BA:XE)
Response Modifying Factors
Changed rate of food intake as factor affecting radioresistance. I. Physiological and methodological prerequisites, 8: 18951 (B:CS:In Czech)
Changed rate of food intake as factor affecting radioresistance. II. Affecting post-irradiative lethality and blood formation recovery, 8: 18952 (B:CS:In Czech)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Optimization
Histological investigations on the effect of zytostatica, ionizing radiation and a radioprotective substance on spleen, lung, lymphatic nodes, bone marrow, skin and muscles on rats under drugs suitable for gynecological cancer therapy, 8: 18860 (R:DE:In German)
Post-Irradiation Therapy
Protection against the pathological effects of high doses of irradiation by marrow grafting; immunological and pathological studies of the graft-versus-host reaction provoked by incompatibility for minor antigens, 8: 18910 (BA:XE)
Side Effects
Consequences of irradiation on the local intestinal immunological system. Prevention and treatment of their effects, 8: 18918 (BA:XE)
Pathogenesis of radiation damage, 8: 18929 (BA:XE)
Standards
Criteria and standards radiation therapy services, 8: 18830 (R:US)

RADIOWAVE RADIATION
Monitoring
Survey report on rf radiation exposures from heat sealers at Beaverite Products, Inc., Beaver Falls, New York. Industrywide study, 8: 18993 (R:US)
RADIUM
Distribution Functions
Barium and radium migration in unconsolidated Canadian geological materials, 8: 18720 (R:CA)
RADIUM 224
Delayed Radiation Effects
Pathogenesis of radiation-induced osteosarcomas, 8: 18857 (R:DE:In German)
RADIUM 226
Excretion
Mobilization and specific decorporation of heavy alkaline earth metals, 8: 18947 (BA:XE)
Gamma Spectroscopy
^{228}Ra, ^{226}Ra and ^{223}Ra in South Carolina ground water: measurement techniques and isotope relationships, 8: 17315 (R:US)
Radioecological Concentration
Contents of radon and radium in the water from large waterworks in Sweden, 8: 18774 (R:SE:In Swedish)
Dose exposure of the environmental population by natural and released Ra-226 and Pb-210 from an uranium mine prospect, 8: 18861 (R:DE:In German)

REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
RHR SYSTEMS
SECONDARY COOLANT CIRCUITS

Level Indicators
Liquid level detector (Patent), 8: 17898 (P:US)

Temperature Noise
Turbulent flow and temperature noise simulation by a multiparticle Monte Carlo method, 8: 17849 (R:GB)

Turbulent Flow
Turbulent flow and temperature noise simulation by a multiparticle Monte Carlo method, 8: 17849 (R:GB)

REACTOR CORE DISRUPTION

Heat Transfer
Evaluation of the calculated results of an unprotected transient undercooling accident in a large, heterogeneous-core, liquid-metal-cooled fast breeder reactor, 8: 17954 (R:US)
Examination and test of the SIMMER-II freezing and melting models (LMFBR), 8: 17948 (R:US)
Flow regime modeling study for the SIMMER-II LMFBR safety code: clad relocation, 8: 17952 (R:US)

Hydraulics
Evaluation of the calculated results of an unprotected transient undercooling accident in a large, heterogeneous-core, liquid-metal-cooled fast breeder reactor, 8: 17954 (R:US)
Examination and test of the SIMMER-II freezing and melting models (LMFBR), 8: 17948 (R:US)
Flow regime modeling study for the SIMMER-II LMFBR safety code: clad relocation, 8: 17952 (R:US)

Risk Assessment
Comparison of selected risk contributions of an LMFBR and an LWR: Phase A. Final report, 8: 17931 (R:US)

REACTOR CORES
Combined use of uranium and plutonium in large fast reactors, 8: 17858 (TG:GB)

Breeding Ratio
Basic possibility of reducing doubling time by the heterogeneous arrangement of different types of fuel in the fast reactor, 8: 17857 (TG:GB)

Hydraulics
Distribution of pressure acting on core barrel and caused by simultaneous operation of several circulating pumps, 8: 17846 (R:CS)

Hydrodynamics
Distribution of pressure acting on core barrel and caused by simultaneous operation of several circulating pumps, 8: 17846 (R:CS)

Specifications
Nuclear calculational model used in the design of the 900 MW(e) LWBR scale-up concept (AWBA Development Program), 8: 17855 (R:US)
Study on nuclear and thermal analysis of FBR initial core, 8: 17852 (R:KR:In Korean)

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
Rice frequency as a parameter of mechanical vibrations of circulating pumps, 8: 17847 (R:CS)

Anemometers
Development of a fiber-optic Doppler anemometer for bubbly two-phase flows. Final report (PWR; BWR), 8: 17799 (R:US)

REACTOR KINETICS
Nuclear calculational model used in the design of the 900 MW(e) LWBR scale-up concept (AWBA Development Program), 8: 17855 (R:US)

Fission Spectra
FISPET: a code for computing fission spectra from ENDF/B, 8: 17895 (R:IT)

REACTOR LICENSING
Nuclear Regulatory Commission issuances, March 1982, 8: 17864 (R:US)
Overview of DOE proposed loss-of-coolant accident (LOCA) rule-revision study (PWR; BWR), 8: 17921 (R:US)
Probabilistic risk assessment and licensing, 8: 17959 (R:US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), January 1-January 31, 1983, 8: 17862 (R:US)
Study of a conceptual nuclear energy center at Green River, Utah: licensing considerations, 8: 17885 (R:US)

Cost
Reducing the cost of administrative justice, 8: 17886 (J:US)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.

Basic data report for drillhole ERDA 6 (Waste Isolation Pilot Plant - WIPP), 8: 17410 (R:US)
Permeability
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Petrology
Investigation of the utility of Gulf Coast salt domes for the storage or disposal of radioactive wastes, 8: 17361 (R:US)
Poisson Ratio
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Porosity
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Tectonics
Investigation of the utility of Gulf Coast salt domes for the storage or disposal of radioactive wastes, 8: 17361 (R:US)
Temperature Effects
Impurities in rock-salt: consequences for the temperature increases at the disposal of high-level nuclear waste, 8: 17399 (R:US)

Tensile Properties
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Thermal Stresses
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Water Influx
Estimations of the rate of penetration of rock-salt by fresh water, 8: 17398 (R:US)
Young Modulus
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
SALTS
Use specific salts whenever possible
Thermal Conductivity
Impurities in rock-salt: consequences for the temperature increases at the disposal of high-level nuclear waste (Kainite, Kieserite), 8: 17399 (R:US)
SAMARIUM
G Value
Nuclear and solid state investigations for the non-cubic paramagnetic system europium in samarium, 8: 18256 (R:DE:In German)
SAMPLERS
Design
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)
Nickel-Cadmium Batteries
Evaluation of batteries used in sampling pumps. Final report, 8: 17979 (R:US)
Performance
Fluid sampling and chemical modeling of geopressured brines containing methane. Final report Mar 80-Feb 81, 8: 17270 (R:US)
SAND PRESSURE
See RESERVOIR PRESSURE
SANDIA LABORATORIES
Libraries
Sandia National Laboratories Technical Library status report, 8: 19395 (R:US)
SANDSTONES
Drill Cores
Multi-Well Experiment Core Program, 8: 17261 (R:US)
Geology
Prediction of hydraulic fracture azimuth through geological, core and analytical studies, 8: 17285 (R:US)
Hydraulic Fracturing
Prediction of hydraulic fracture azimuth through geological, core and analytical studies, 8: 17285 (R:US)
Mechanical Properties
Multi-Well Experiment Core Program, 8: 17261 (R:US)
Mineralogy
Multi-Well Experiment Core Program, 8: 17261 (R:US)
Permeability
Multi-Well Experiment Core Program, 8: 17261 (R:US)
Porosity
Multi-Well Experiment Core Program, 8: 17261 (R:US)
SANITARY LANDFILLS
Design
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Mathematical Models
Dynamic simulation modeling of landfill gas generation and processing, 8: 18015 (RA:US)
Site Selection
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
SATELLITE POWER SYSTEM

Capitalized Cost
Acid rain mitigation study. Volume II. FGD cost estimates (appendices). Final report Feb 80-Feb 81, 8: 17775 (R:US)
Operating Cost
Acid rain mitigation study. Volume II. FGD cost estimates (appendices). Final report Feb 80-Feb 81, 8: 17775 (R:US)

Performance
Augmentation of fine particle collection in the epxp scrubber. Final report aug 77-aug 80, 8: 18481 (R:US)
Sludges
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
SEA BED
Monitoring
Analysis of current meter records at the northwest atlantic 2800 metre radioactive waste dumpsite. Final report, 8: 17431 (R:US)
Natural Gas Deposits
Gas hydrates in deep ocean sediments. Annual report 1 Apr 81-31 Mar 82, 8: 17207 (R:US)
SEA DISPOSAL
See MARINE DISPOSAL
SEALING MATERIALS
Field Tests
Sealant tests to control radon emanation in a uranium mine. Open file report sep 79-dec 81, 8: 17447 (R:US)
Materials Testing
Improved solar-collector sealants. Semiannual report, May 1981-October 1981, 8: 17679 (R:US)
SEAS
See also ATLANTIC OCEAN
Oil Spills
Oil spill combat: damage assessment using multiattribute utility analysis. Final report, 8: 17242 (R:US)
Processes which influence the motions and characteristics of oil at sea, 8: 17243 (R:US)
Thermal Pollution
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data, 8: 18781 (R:BR:In several languages)
SEASONAL THERMAL ENERGY STORAGE
Reporting Requirements
Draft recommendations for a European reporting format on the performance of solar heat stores. Final report, 8: 17689 (R:XE)
SEAWATER
Contamination
Radioecological investigations of an environmental contamination with transuranic elements, 8: 18779 (BA:XE)
Corrosive Effects
Corrosion fatigue of offshore and ship-building steels, 8: 18263 (R:DE)
SEAWEEDS
Aquaculture
Marine biomass: New York state site and species study compositional analysis and systems studies. Final report Mar-Dec 81, 8: 17494 (R:US)
SEBACEOUS GLANDS
See SKIN
SECOND SOUND
Detection
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow, 8: 19072 (R:DE:In German)
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY COOLANT CIRCUITS
Gas Analysis
Monitoring system for determining air inleakage and oxygen concentrations in the secondary cycle of pressurized-water-reactor plants. Final report, 8: 17833 (R:US)
Pipes
Investigation of the conservatism associated with different combinations between primary and secondary piping responses (PWR;BWR), 8: 17806 (R:US)
SECONDARY RECOVERY
See ENHANCED RECOVERY
SEDIMENTS
Chemical Analysis
Investigation of levels of organic pollutants in selected areas in the Philippines, 8: 18749 (R:PH)
Contamination
Radioecological investigations of an environmental contamination with transuranic elements, 8: 18779 (BA:XE)
Environmental Transport
User's manual for the instream sediment-contaminant transport model SERATRA. Final report Apr 78-Jan 80, 8: 17446 (R:US)
Mercury
Total mercury in water and sediment from Honda Bay area in Palawan, 8: 18748 (R:PH)
Radioactivity
Plutonium in the Rhine-Meuse-Scheldt delta; analysis of estuarine sediment, salt-marsh soil and vegetation samples, 8: 18780 (BA:XE)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
SEISMIC WAVES
Wave Propagation
Seismic waves from A-bombs detonated over a land mass, 8: 18582 (R:US)
SELENIUM
Activation Analysis
Activation analytical determination of essential and toxic trace elements in biological material, 8: 18312 (R:DE:In German)
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Chemical Reactions
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Molecular Structure
Neutron diffraction structure investigations for expanded liquid selenium up to 1400°C and 300 bar, 8: 18302 (R:DE:In German)
SELENIUM 76
Multipole Transitions
Multipole composition of the ^{76}Se gamma transitions, 8: 19160 (RA:SU:In Russian)
SELENIUM 77 TARGET
Neutron Reactions
Study on the $^{77}Se(n,\alpha)^{74}Ge$ and $^{146}Nd(N,\alpha)^{143}Ce$ reactions on resonance neutrons, 8: 19165 (R:XJ:In Russian)
SELENIUM IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s^{2}3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
SELF-SERVE STATIONS
See GASOLINE SERVICE STATIONS
SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS
SEMICONDUCTOR DETECTORS
See also GE SEMICONDUCTOR DETECTORS
Electronic Circuits
Spectrometric pathway with semiconductor radiation detectors, 8: 18529 (RA:CS:In Czech)
Maintenance
Testing and maintenance of semiconductor detector and preamplifier, 8: 18530 (RA:CS:In Czech)
Performance Testing
Testing and maintenance of semiconductor detector and preamplifier, 8: 18530 (RA:CS:In Czech)
Stabilization
Spectrometer drift compensation, 8: 18532 (RA:CS:In Czech)
SEMICONDUCTOR DEVICES
See also CHARGE-COUPLED DEVICES
SEMICONDUCTOR DIODES
SEMICONDUCTOR LASERS
Design
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)
SEMICONDUCTOR DIODES
See also LIGHT EMITTING DIODES
Diffusion Barriers
Diffusion barrier for long wavelength laser diodes (Patent application), 8: 18446 (P:US)

SEMICONDUCTOR LASERS
Efficiency
Power efficiency of semiconductor injection lasers, 8: 18437 (R:US)
Optimization
Power efficiency of semiconductor injection lasers, 8: 18437 (R:US)
Semiconductor Diodes
Diffusion barrier for long wavelength laser diodes (Patent application), 8: 18446 (P:US)
SENEGAL
Energy Conservation
Senegal food and energy study: energy use and opportunities for energy-related improvements in the food system, 8: 18850 (R:US)
SENIOR CENTERS
See PUBLIC BUILDINGS
SEPARATORS (STEAM)
See STEAM SEPARATORS
SEPTUM MAGNETS
Installation
SPEAR septum magnet layout and installation in Region 355 (Engineering Materials), 8: 18509 (E:US)
SEROTONIN
Radiosensitivity Effects
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
SERVICE STATIONS
See GASOLINE SERVICE STATIONS
SET THEORY
Computer Codes
STOP: a fast method of disjointing binary product sets, 8: 19388 (R:US)
SEVERANCE TAX
Economic Impact
California oil severance tax: who gains. who pays, 8: 17229 (B:US)
Effects of a severance tax on oil produced in California, 8: 17230 (B:US)
SEWAGE
See also SEWAGE SLUDGE
Dilution
Field measurements of initial dilutions at a sea outfall. Technical report, 8: 17473 (R:US)
SEWAGE SLUDGE
Environmental Effects
Elemental cycling in southern pine plantations with nutrient and heavy metal amendments. Annual report, FY 1982, 8: 18713 (R:US)
Radiosterilization
Beneficial uses of nuclear byproducts/sewage sludge irradiation project. Progress report, October 1981-March 1982, 8: 17474 (R:US)
SHALE MINING
See OIL SHALE MINING
SHALE OIL
Chemical Analysis
Metal coordination chemistry: removal and recovery of metal compounds from heavy crude and shale oils with multidentate ligands. Annual report, October 1981-October 1982, 8: 18318 (R:US)
Combustion Products
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Physical Properties
Evaluation of synthetic-fuel-character effects on rich-lean stationary-gas-turbine combustion systems. Volume 1. Subscale test program. Final report, 8: 17757 (R:US)
Refining
Oil shales energy source development. Final report, 8: 17299 (R:US)
SHALES
Compression Strength
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Permeability
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Poisson Ratio
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Porosity
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Tensile Properties
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Thermal Stresses
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Young Modulus
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
SHEATHS (FUEL)

SILICON NITRIDES

SIGMA-2430 RESONANCES
Particle Production
Properties and interactions of neutrino (1977-1980). Charm production, 8: 19087 (R:SU:In Russian)
SIGNAL-TO-NOISE RATIO
Algorithms
Adaptive line enhancement and sinusoidal burst detection, 8: 19384 (R:US)
SILANES
Chemical Radiation Effects
Electron-stimulated desorption from condensed branched alkanes (Tetramethylsilane, deuterated isomers of isobutane), 8: 18368 (R:US)
Ignition
Laboratory tests at elevated pressures of a silane igniter system for in-situ coal gasification, 8: 17067 (R:US)
Pyrolysis
Silane pyrolysis in a free-space reactor, 8: 17609 (BA:US)
SILICA
Photoacoustic Spectroscopy
Photoacoustic spectroscopy of chemically modified surfaces. Doctoral thesis, 8: 18306 (R:US)
SILICON
Atom Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
Charged-Particle Transport
Stopping power of rare gases in amorphous silicon for MeV helium ions, 8: 19216 (RA:US)
Transition effects in the transmission of up to 20 keV electrons through laminated structures, 8: 19237 (RA:SU:In Russian)
Crystal Growth
Controlled nucleation and growth process for large-grained polycrystalline-silicon photovoltaics. Final report, 8: 17563 (R:US)
Environmental Transport
Chemical transport beneath a uranium mill tailings pile, Riverton, Wyoming, 8: 17426 (R:US)
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Ion Implantation
Investigation of the depth profile of the beam damage in silicon after ion implantation by means of the MOS-structure, 8: 18301 (R:DE:In German)
Nucleation
Controlled nucleation and growth process for large-grained polycrystalline-silicon photovoltaics. Final report, 8: 17563 (R:US)
PIXE Analysis
Preliminary data on atmospheric aerosol of the Amazon basin, 8: 18604 (R:BR)
Trace-elements of the atmospheric aerosol of the Amazon basin, 8: 18602 (R:BR)
Production
A photovoltaic industry overview - the results of a survey on photovoltaic technology industrialization, 8: 17597 (BA:US)
Silane pyrolysis in a free-space reactor, 8: 17609 (BA:US)
Solar cells fabricated with unconventional silicon materials, 8: 17612 (BA:US)
SILICON 28 REACTIONS
Fusion Reactions
Angular correlations of α-particles from decay of ^{40}Ca following fusion of ^{30}Si + ^{12}C, 8: 19145 (R:FR)
SILICON ALLOYS
Microstructure
Experimental characterization of the flux-line lattice in superconducting V_3Si, 8: 18247 (R:US)
Superconductivity
Experimental characterization of the flux-line lattice in superconducting V_3Si, 8: 18247 (R:US)
SILICON HYDRIDES
See SILANES
SILICON NITRIDES
Mechanical Properties
Influence of composition and process selection on densification of silicon nitride. Final report, 8: 18278 (R:US)
Microstructure
Sintering phenomena of non-oxide silicon compounds. Technical report No. 4, January 1, 1982-December 31, 1982, 8: 18279 (R:US)
Production
Influence of composition and process selection on densification of silicon nitride. Final report, 8: 18278 (R:US)
Sintering
Sintering phenomena of non-oxide silicon compounds. Technical report No. 4, January 1, 1982-December 31, 1982, 8: 18279 (R:US)
SILICON SOLAR CELLS
Annealing
Laser processing of silicon solar cells, 8: 17604 (BA:US)
Antireflection Coatings
Development of technique for AR coating and nickel and copper metallization of solar cells. Final report, 8: 17544 (R:US)
Efficiency
Development of thin wraparound junction silicon solar cells. Final report, Sep. 1980 - Nov. 1981, 8: 17565 (R:US)
Improved silicon solar cells for high concentration levels, 8: 17593 (BA:US)
Electric Conductivity
Contact resistivities between solar-cell-type Si and transition metal nitrides, 8: 17607 (BA:US)
Electric Contacts
Contact resistivities between solar-cell-type Si and transition metal nitrides, 8: 17607 (BA:US)
Development of technique for AR coating and nickel and copper metallization of solar cells. Final report, 8: 17544 (R:US)
Electrical Properties
Silicon MIS/inversion-layer solar cells. Final report, October 1, 1981-September 30, 1982, 8: 17587 (R:US)
Energy Efficiency
Characterization of ASEC BSR 2 ohm-cm silicon solar cells with dielectric wraparound contacts as a function of temperature and intensity, 8: 17569 (R:US)
Fabrication
Development of thin wraparound junction silicon solar cells. Final report, Sep. 1980 - Nov. 1981, 8: 17565 (R:US)
Improved silicon solar cells for high concentration levels, 8: 17593 (BA:US)
Silicon MIS/inversion-layer solar cells. Final report, October 1, 1981-September 30, 1982, 8: 17587 (R:US)
Solar cells fabricated with unconventional silicon materials, 8: 17612 (BA:US)
Grain Boundaries
Strategies for the analysis of the effects of grain boundaries on the performance of polysilicon solar cells, 8: 17603 (BA:US)
Impurities
Thermal stability of impurities in silicon solar cells, 8: 17608 (BA:US)
Materials
Solar cells fabricated with unconventional silicon materials, 8: 17612 (BA:US)
Mathematical Models
Silicon MIS/inversion-layer solar cells. Final report, October 1, 1981-September 30, 1982, 8: 17587 (R:US)
Nitrides
Contact resistivities between solar-cell-type Si and transition metal nitrides, 8: 17607 (BA:US)
Performance
Improved performance from solar cells made from candidate sheet silicon materials, 8: 17610 (BA:US)
Strategies for the analysis of the effects of grain boundaries on the performance of polysilicon solar cells, 8: 17603 (BA:US)
Physical Radiation Effects
Investigation of solar cells fabricated on low-cost silicon sheet materials using 1 MeV electron irradiation, 8: 17611 (BA:US)
Spectral Response
Investigation of solar cells fabricated on low-cost silicon sheet materials using 1 MeV electron irradiation, 8: 17611 (BA:US)

Stability
Thermal stability of impurities in silicon solar cells, 8: 17608 (BA:US)
SILICONES
Improved solar-collector sealants. Semiannual report, May 1981-October 1981, 8: 17679 (R:US)
Electric Conductivity
HIgh-temperature electrical conductivity and thermal decomposition of Sylgard 184 and 184/GMB, 8: 18295 (R:US)
Pyrolysis
HIgh-temperature electrical conductivity and thermal decomposition of Sylgard 184 and 184/GMB, 8: 18295 (R:US)
SILT
Particle Resuspension
Resuspension of particles from ground surfaces, 8: 18700 (BA:XE)
SILVER
Activation Analysis
Activation analytical determination of essential and toxic trace elements in biological material, 8: 18312 (R:DE:In German)
Catalytic Effects
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)
Charged-Particle Transport
Stopping power of Ni, Ag, Au and Pb for ~ 7 MeV/n α-particles and carbon ions (Z_1^3 proportional deviation from the Bethe formula), 8: 19212 (RA:US)
Complexometry
Kinetics of complexation and oxidation of ethanolamine and diols by silver(II), 8: 18352 (J:US)
Ion Collisions
Charge state distribution of light ions at glancing collision with solid surface, 8: 19057 (RA:US)
Proton Transport
Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons, 8: 19209 (RA:US)
SILVER-ZINC BATTERIES
Battery Separators
Development of improved separators for alkaline zinc batteries, 8: 17978 (R:US)
SIMS

Chemical Composition
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Uses
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Waste Disposal
Disposal of fly-ash alkali FGD waste in a western decoaled strip mine. Quarterly technical progress report, June 1-August 31, 1982, 8: 17122 (R:US)
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Sludge disposal from acid mine drainage treatment. Report of investigations/1982, 8: 17117 (R:US)
Waste Processing
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
Waste Transportation
FGD by-product disposal manual: third edition. Final report, 8: 17105 (R:US)
SLUGS (FUEL)
See FUEL RODS
SLURRIES
See also FUEL SLURRIES
Water Removal
Preliminary studies on the dewatering of coal-clay waste slurries using a flocculant. Report of investigations/1982, 8: 17107 (R:US)
SLURRIES (FUEL)
See FUEL SLURRIES
SLURRY PIPELINES
Coal slurry pipeline transport, 8: 17173 (RA:DE)
Economic Analysis
Coal-slurry pipelines in Virginia: a preliminary feasibility study. Final report, 8: 17179 (R:US)
Feasibility Studies
Coal-slurry pipelines in Virginia: a preliminary feasibility study. Final report, 8: 17179 (R:US)
Waste Product Utilization
Characterization, renovation, and utilization of water from slurry transport systems. Completion report 1 Oct 79-30 Sep 81, 8: 17108 (R:US)
SMALL INTESTINE
Biological Radiation Effects
Effect of multiple daily fractionation of the dose in the small intestine of rats, 8: 18919 (BA:XE)
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Licensing
Report on the Federal Energy Regulatory Commission's role in the Department's small hydroelectric development programs, 8: 17525 (R:US)
Report on the Rural Energy Initiative Hydroelectric Program, 8: 17524 (R:US)
Retrofitting
Report on the Rural Energy Initiative Hydroelectric Program, 8: 17524 (R:US)
SMELTERS
Personnel Monitoring
Performance of chemical cartridge, half-mask respirators under working conditions in a copper smelter. Final report, 8: 18617 (R:US)
SMELTING
Environmental Impacts
Environmental consideration for emerging copper winning processes. Final report Jul 79-Apr 81, 8: 18614 (R:US)
SNOW
Geothermal Heating
Geothermal energy for highway snow and ice control. Summary report, 8: 17724 (R:US)
Melting
Geothermal energy for highway snow and ice control. Summary report, 8: 17724 (R:US)
SNR REACTOR
See SNR-1 REACTOR
SNR-1 REACTOR
Prior to 1977, SNR REACTOR was used.

Fuel Pins
Theoretical and experimental analysis of fast reactor fuel performance, 8: 17853 (R:DE)

SNR-300 REACTOR
See SNR-1 REACTOR

SOCIO-ECONOMIC FACTORS
Energy Source Development
Long-term energy resources and the energy outlook, 8: 18030 (BA:US)
Resource Potential
Long-term energy resources and the energy outlook, 8: 18030 (BA:US)

SODIUM
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Adsorption
Changes in sodium adsorption ratios following revegetation of coal mine spoils in southeastern Montana. Forest service research paper, 8: 17124 (R:US)
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Atom-Atom Collisions
Measurement of the differential scattering cross sections of electron excited sodium by argon, 8: 19068 (R:DE:In German)
Collisions
Interactions of molecules with surfaces. Progress report, 1 February 1982-31 January 1983, 8: 19062 (R:US)
Environmental Transport
Chemical transport beneath a uranium mill tailings pile, Riverton, Wyoming, 8: 17426 (R:US)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)

SODIUM HYDROXIDES
Microwave Spectra
Molten carbonates: microwave studies of the vapor state. Progress report, June 1, 1982-May 31, 1983, 8: 18131 (R:US)
Structural Chemical Analysis
Molten carbonates: microwave studies of the vapor state. Progress report, June 1, 1982-May 31, 1983, 8: 18131 (R:US)

SODIUM MINERALS
See MINERALS

SOIL CHEMISTRY
Response Modifying Factors
Effects of acid precipitation on soil leachate quality: computer calculations, 8: 18608 (R:US)

SOILS
Chemical Analysis
Comparative evaluations of analytical methods for uranium with regard to application in exploring uranium, 8: 18313 (R:DE:In German)
Quality assurance for environmental analytical chemistry: 1981, 8: 18317 (R:US)
Chemical Properties
Consequences of sulfuric acid inputs to a forest soil, 8: 18715 (BA:US)
Decontamination
Screening levels for radionuclides in soil: application to decontamination and decommissioning (D and D) criteria, 8: 18719 (R:US)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Physical Properties
Consequences of sulfuric acid inputs to a forest soil, 8: 18715 (BA:US)
Radioactivity
Plutonium in the Rhine-Meuse-Scheldt delta; analysis of estuarine sediment, salt-marsh soil and vegetation samples, 8: 18780 (BA:XE)
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Radionuclide Migration
Investigation of Great Basin big sagebrush and black greasewood as biogeochemical indicators of uranium mineralization. Final report. National Uranium Resource Evaluation, 8: 19021 (R:US)
Screening levels for radionuclides in soil: application to decontamination and decommissioning (D and D) criteria, 8: 18719 (R:US)

SOLAR ACTIVITY
See also SOLAR WIND
Solar-geophysical data number 454, june 1982. part ii (comprehensive reports). data for december 1981, 8: 19035 (R:US)
Solar-geophysical data number 457, September 1982. Part 2 (comprehensive reports). Data for March 1982, May 1980 and miscellanea, 8: 19038 (R:US)
Solar-geophysical data 456, August 1982. Part I (prompt reports). data for July 1982, June 1982 and late data, 8: 19039 (R:US)
solar-geophysical data number 456, august 1982. part ii (comprehensive reports). data for february 1982 and miscellanea, 8: 19040 (R:US)
Radiowave Radiation
Solar-geophysical data number 455, July 1982. Part II (comprehensive reports). Data for January 1982 and miscellanea, 8: 19037 (R:US)
Solar Radiation
Solar-geophysical data number 452, April 1982. Part II (comprehensive reports). Data for October 1981 and miscellanea, 8: 19034 (R:US)
X Radiation
Solar-geophysical data number 455, July 1982. Part II (comprehensive reports). Data for January 1982 and miscellanea, 8: 19037 (R:US)

SOLAR AIR CONDITIONING
Comparative Evaluations
Competitive assessment of desiccant solar/gas systems for single family residences. Final report Aug 81-Jan 82, 8: 17674 (R:US)
Demonstration Programs
Assessment of the National Program for Solar Heating and Cooling of Commercial Buildings, 8: 17656 (R:US)
Economic Analysis
Competitive assessment of desiccant solar/gas systems for single family residences. Final report Aug 81-Jan 82, 8: 17674 (R:US)

SOLAR AIR HEATERS
Retrofitting
Arkansas solar-retrofit guide, 8: 17655 (R:US)

SOLAR ATMOSPHERE
Electron Density
Invalidity of local thermodynamic equilibrium for electrons in the solar transition region. I. Fokker-Planck results, 8: 19025 (R:US)

SOLAR BATTERIES
See SOLAR CELL ARRAYS

SOLAR CELL ARRAYS
Computerized Simulation
Photovoltaic array - power conditioner interface characteristics, 8: 17620 (R:US)
Connectors
Solar array construction (Patent), 8: 17589 (P:US)
Data Acquisition Systems
Capacitive load and data-acquisition system for photovoltaic-array testing, 8: 17581 (R:US)
Design
Solar array construction (Patent), 8: 17589 (P:US)
Equipment Interfaces
Photovoltaic array - power conditioner interface characteristics, 8: 17620 (R:US)
Flight Testing
Solar array flight experiment (SAFE), 8: 17564 (R:US)
Performance Testing
Capacitive load and data-acquisition system for photovoltaic-array testing, 8: 17581 (R:US)

SOLAR CELL RECEIVERS
See SOLAR RECEIVERS
SOLAR CELLS
See also CONCENTRATOR SOLAR CELLS
GALLIUM ARSENIDE SOLAR CELLS
MIS SOLAR CELLS
SILICON SOLAR CELLS
Cost
Status and assessment of collector cost-reduction efforts, 8: 17600 (BA:US)
Doped Materials
Modeling solar cells containing heavily doped regions, 8: 17602 (BA:US)
Electric Conductivity
I-V characterization of solar cells, 8: 17546 (R:BR:In several languages)
Electric Contacts
Metallization for large-area solar cells, 8: 17606 (BA:US)
Encapsulation
An analytical approach to photovoltaic encapsulation system design, 8: 17605 (BA:US)
Heat Pipes
A passive heat pipe cooled photovoltaic receiver, 8: 17595 (BA:US)
Hybrid Systems
Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system, 8: 17640 (R:US)
Mathematical Models
Modeling solar cells containing heavily doped regions, 8: 17602 (BA:US)
Technology Assessment
Overview - flat-plate technology, 8: 17601 (BA:US)
Recent progress in the development of advanced solar cells, 8: 17613 (BA:US)
Status and assessment of collector cost-reduction efforts, 8: 17600 (BA:US)
SOLAR COLLECTORS
See also COMBINED COLLECTORS
CONCENTRATING COLLECTORS
FLAT PLATE COLLECTORS
SOLAR AIR HEATERS
SOLAR PONDS
Design
Diffractive solar collection systems, 8: 17683 (RA:US)
Diffraction
Diffractive solar collection systems, 8: 17683 (RA:US)
Feasibility Studies
Solar transition: compatible conventional energy systems, 8: 18212 (BA:US)
Holography
Diffractive solar collection systems, 8: 17683 (RA:US)
Research Programs
Solar-energy program, FY 1981. Chapter from the Energy and Environment Division annual report, 8: 17662 (R:US)
Water Requirements
Assessment of water use impacts from solar-energy development, 8: 17538 (R:US)
SOLAR COOKERS
Design
Solar cookers: test results and new designs, 8: 17675 (R:US)
Performance Testing
Solar cookers: test results and new designs, 8: 17675 (R:US)
SOLAR COOLING SYSTEMS
See also PASSIVE SOLAR COOLING SYSTEMS
Absorption Refrigeration Cycle
Active solar cooling, 8: 17664 (RA:US)
Design
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8: 17657 (R:US)
LBL building 71 solar cooling project, 8: 17666 (RA:US)
Environmental Impacts
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Field Tests
Support for SOLERAS solar cooling engineering field tests, 8: 17665 (RA:US)
Performance
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8: 17657 (R:US)
Reliability
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8: 17657 (R:US)
Research Programs
Active solar cooling, 8: 17664 (RA:US)
Solar-energy program, FY 1981. Chapter from the Energy and Environment Division annual report, 8: 17662 (R:US)
Risk Assessment
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
SOLAR CORONA
Stability
On the thermal stability of coronal loop plasma, 8: 19026 (R:US)
SOLAR DOMESTIC WATER HEATING

SOLAR-ASSISTED HEAT PUMPS
Demonstration Programs
FEDSOL: program user's manual and economic optimization guide for solar federal building projects. Final report, 8: 17671 (R:US)
Design
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8: 17657 (R:US)
Performance
Chicago Navy Pier Terminal Building solar space and water heating demonstration project, 8: 17654 (R:US)
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8: 17657 (R:US)
Program Management
Overview of the Solar in Federal Buildings Demonstration Program (SFBP), 8: 17650 (R:US)
Reliability
How to solve materials and design problems in solar heating and cooling. Energy technology review No. 77, 8: 17657 (R:US)
Test Facilities
The Irish solar pilot test facility: design, construction and first period of operation. Final report, 8: 17676 (R:US)

SOLAR INDUSTRY
Commercialization
Solar-thermal-program strategy. Task V report, 8: 17636 (R:US)
Status of the solar-thermal industry: an assessment, 8: 17637 (R:US)
Economic Analysis
Small business in the emerging energy technologies. Final report, 8: 18124 (R:US)
Financial Incentives
Options for federal income-tax incentives for the solar-energy industry. Task III report, 8: 17534 (R:US)
Planning
Solar-thermal-program strategy. Task V report, 8: 17636 (R:US)
Surveys
A photovoltaic industry overview - the results of a survey on photovoltaic technology industrialization, 8: 17597 (BA:US)
Tax Credits
Options for federal income-tax incentives for the solar-energy industry. Task III report, 8: 17534 (R:US)
Technology Assessment
Status of the solar-thermal industry: an assessment, 8: 17637 (R:US)

SOLAR KILNS
Field Tests
Solar-thermal decomposition of zinc sulfate, 8: 17644 (R:US)

SOLAR NEUTRINOS
Prior to July, 1975 information was indexed to NEUTRINOS.
Neutrino Detection
Underground science at Homestake (X-ray spectra from e.c. decay of ^{37}Ar from $^{37}Cl(nu, e^-)^{37}Ar$), 8: 18521 (R:US)

SOLAR PONDS
Design
Solar-thermal-energy collection/storage-pond system (Patent), 8: 17687 (P:US)
Feasibility Studies
Potential for salt-gradient solar ponds in New York state. Final report, 8: 17685 (R:US)
Membranes
Solar-thermal-energy collection/storage-pond system (Patent), 8: 17687 (P:US)
Performance
A review of the salt-gradient solar pond technology, 8: 17684 (R:US)

SOLAR POWER PLANTS
See also OCEAN THERMAL POWER PLANTS
ORBITAL SOLAR POWER PLANTS
SOLAR THERMAL POWER PLANTS
Economic Analysis
Solar power stations for remote sites: an economic analysis. Master's thesis, 8: 17533 (R:US)

SOLAR RADIATION
See also DIFFUSE SOLAR RADIATION
Radiowave Radiation
Cross-correlations between monthly averages of solar-interplanetary indices fom 1971 to 1978. Technical memo, 8: 19033 (R:US)
Solar Wind
Cross-correlations between monthly averages of solar-interplanetary indices fom 1971 to 1978. Technical memo, 8: 19033 (R:US)
X Radiation
A summary of solar 1-8a measurements from the SMS and GOES satellites, 1977-1981, 8: 19036 (R:US)

SOLAR RECEIVERS
See also CAVITY RECEIVERS
CENTRAL RECEIVERS
EXTERNAL RECEIVERS
Design
Development of a 30-kW high temperature solar receiver using small particles as the heat exchanger, 8: 17639 (RA:US)
Optimization
Technological activities for high performance receivers, 8: 17645 (TG:US)
Performance Testing
Technological activities for high performance receivers, 8: 17645 (TG:US)
Research Programs
Solar-energy program, FY 1981. Chapter from the Energy and Environment Division annual report, 8: 17662 (R:US)
Thermal Efficiency
Technological activities for high performance receivers, 8: 17645 (TG:US)

SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS

SOLAR SPACE HEATING
Demonstration Programs
Assessment of the National Program for Solar Heating and Cooling of Commercial Buildings, 8: 17656 (R:US)

SOLAR THERMAL CONVERSION
Use for overviews of solar thermal program.
Budgets
DOE solar-thermal-energy program on-line budget analysis, 1983. Task II report, 8: 17535 (R:US)
Marketing Research
International solar-thermal market assessments: an evaluation, 8: 17536 (R:US)
National Program Plans
DOE solar-thermal-energy program on-line budget analysis, 1983. Task II report, 8: 17535 (R:US)
Reviews
International solar-thermal market assessments: an evaluation, 8: 17536 (R:US)

SOLAR THERMAL POWER PLANTS
Planning
Project status report No. 4, 8: 18113 (R:US)

SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS

SOLAR WATER HEATERS
See also PASSIVE SOLAR WATER HEATERS
Maintenance
Solar domestic hot-water system: La Quinta Motor Inn, Casper, Wyoming, 8: 17653 (R:US)
Performance
Analysis of field-test data from domestic solar-water heaters in the southern United States, period through September 1982, 8: 17651 (R:US)
Specifications
Solar domestic hot-water system: La Quinta Motor Inn, Casper, Wyoming, 8: 17653 (R:US)

Testing
Solar domestic hot-water system: La Quinta Motor Inn, Casper, Wyoming, 8: 17653 (R:US)
SOLAR WATER HEATING
Use for solar domestic water heating; not for process hot water.
Research Programs
Passive research and development, 8: 17663 (RA:US)
SOLAR WIND
Energy Spectra
Study and analyze energetic particle and magnetic activity data. Final report 1 apr 79-31 mar 82, 8: 19027 (R:US)
SOLAR-ASSISTED HEAT PUMPS
Radiative Cooling
Solar-assisted water-source heat pump. Final report, 8: 17660 (R:US)
SOLID STATE LASERS
See also NEODYMIUM LASERS
Laser Materials
Development of host crystals for ce(+3) blue and blue-green solid-state lasers. Final report 1 Jan-30 Jun 82, 8: 18430 (R:US)
SOLID WASTES
See also TAILINGS
WOOD WASTES
Anaerobic Digestion
Characterization and environmental studies on anaerobic digestion of solid wastes. Progress report, February 1, 1982-July 31, 1982, 8: 18205 (R:US)
Chemical Analysis
Components identified in energy-related wastes and effluents. Final report Nov 76-Nov 79, 8: 18754 (R:US)
Chemical Composition
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Inventories
Inventory of waste embankments of surface and underground openings: metal/nonmetal active mines. Open file report 30 Sep 79-20 Jul 81, 8: 18197 (R:US)
Leaching
Geochemistry of leachates from selected coal mining and combustion wastes, 8: 17110 (R:US)
Waste Product Utilization
Feasibility of using cemented backfill in active underground coal mines to prevent subsidence. Open file report Apr 79-Nov 81, 8: 17151 (R:US)
Water Removal
Preliminary studies on the dewatering of coal-clay waste slurries using a flocculant. Report of investigations/1982, 8: 17107 (R:US)
SOLIDS
Binding Energy
Stochastic calculation of interaction energies, 8: 19070 (J:US)
Charged-Particle Transport
Charge states and dynamic screening of swift ions in solids, 8: 19207 (R:US)
Empirical stopping powers for ions in solids, 8: 19215 (RA:US)
Physical Properties
Modification of the Purdue University physical properties package (PPROP) to allow the handling of streams containing solids, 8: 19381 (R:US)
Stopping Power
Mean excitation energies for use in Bethe's stopping-power formula, 8: 19213 (RA:US)
SOLUTION MINING
Cost Benefit Analysis
Cost and sensitivity analysis for uranium in situ leach mining. Open file report Oct 79-Mar 81, 8: 17320 (R:US)
Environmental Impacts
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
Promises and problems of a new uranium-mining method: in-situ solution mining. Environmental geology 11, 8: 17317 (R:US)
Sensitivity Analysis
Cost and sensitivity analysis for uranium in situ leach mining. Open file report Oct 79-Mar 81, 8: 17320 (R:US)
Technology Assessment
Promises and problems of a new uranium-mining method: in-situ solution mining. Environmental geology 11, 8: 17317 (R:US)
Water Pollution Abatement
Analysis of groundwater criteria and recent restoration attempts after in situ uranium leaching. Open file report, 8: 17430 (R:US)
SOLVATED ELECTRONS
G Value
Modeling early events in the radiation chemistry of dilute aqueous solutions, 8: 18367 (R:US)
SOLVENT-REFINED COAL
Chemical Analysis
Trace metal speciation in coal-derived products prepared with a novel process solvent (Seven samples), 8: 17087 (RA:US)
Hydrogenation
Catalytic hydrogenation of SRC-I product at Wilsonville Pilot Plant, 8: 17042 (RA:US)

MASS SPECTROMETERS
NEUTRON SPECTROMETERS
NMR SPECTROMETERS
TIME-OF-FLIGHT SPECTROMETERS
π^0 spectrometer for photopion production studies, 8: 18522 (R:US)
Design
Development of a compact microwave spectrometer for gas analysis, based on the stark effect. Final report Oct 78-Dec 80, 8: 18686 (TG:US)
Stability
Spectrometer drift compensation, 8: 18532 (RA:CS:In Czech)
Stabilization
Spectrometer drift compensation, 8: 18532 (RA:CS:In Czech)
SPEED REGULATORS
Design
Variable current speed controller for eddy current motors, 8: 18421 (P:US)
SPENT FUEL ELEMENTS
Post-Irradiation Examination
Application of gamma-spectrometry to post irradiation examination (CAERI code), 8: 17899 (R:KR:In Korean)
Rail Transport
Special routing of spent fuel shipments. Final report Dec 79-Apr 81, 8: 17340 (R:US)
SPENT FUEL STORAGE
Test completion plan for Spent Fuel Test - Climax, Nevada Test Site, 8: 17343 (R:US)
Evaluation
Thermal calculations for the design, construction, operation, and evaluation of the Spent Fuel Test - Climax, Nevada Test Site, 8: 17342 (R:US)
Forecasting
Projection of US LWR spent fuel storage requirements, 8: 17341 (R:US)
Planning
Long-term storage of spent nuclear fuel, 8: 17424 (B:GB)
Underground Storage
Thermal calculations for the design, construction, operation, and evaluation of the Spent Fuel Test - Climax, Nevada Test Site, 8: 17342 (R:US)
SPENT FUELS
After-Heat
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Cooling
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Dissolution
Agitation apparatus (Patent application), 8: 17338 (P:US)
Isotope Ratio
Preparation of a data bank system for isotope correlation on spent nuclear fuels, 8: 17466 (R:JP:In Japanese)
Packaging
Conceptual design requirements for spent fuel, high-level waste, and transuranic waste packages, 8: 17408 (R:US)
Reprocessing
Agitation apparatus (Patent application), 8: 17338 (P:US)
Industrial experience of irradiated nuclear fuel reprocessing, 8: 17333 (R:BE:In French)
Safeguards
Preparation of a data bank system for isotope correlation on spent nuclear fuels, 8: 17466 (R:JP:In Japanese)
Underground Disposal
Comparison of risks due to HLW and SURF repositories in bedded salt, 8: 17443 (R:US)
SPERMATOCYTES
Meiosis
Chromosome pairing and chiasma formation in human meiosis, 8: 18821 (BA:XE)
SPERMATOGENESIS
Non-Disjunction
Cytogenetic studies in mammalian oogenesis and spermatogenesis on the induction of nondisjunction and structural chromosome anomalies, with special consideration of the genetic risk in the F_1 population, 8: 18905 (BA:XE)
SPERMATOGONIA
Chromosomal Aberrations
Late somatic effects, cancer induction and genetic radiosensitivity in mammals, 8: 18928 (BA:XE)
SPLEEN CELLS
Biological Radiation Effects
Functional consequences of damage to eukaryotic cells by ionizing radiation, 8: 18925 (BA:XE)
Delayed Radiation Effects
Radiation and marrow aplasia: stem cell kinetics after prolonged or long-past radiation, 8: 18914 (BA:XE)
Radiosensitivity
Biological effects of irradiation, 8: 18916 (BA:XE)
Functional consequences of damage to eukaryotic cells by ionizing radiation, 8: 18925 (BA:XE)
SPOIL BANKS
Compacting
Compaction criteria for coal waste embankments. Open file report Feb 80-Aug 81, 8: 17115 (R:US)
Sorptive Properties
Changes in sodium adsorption ratios following revegetation of coal mine spoils in southeastern Montana. Forest service research paper, 8: 17124 (R:US)
SPRAY PONDS
See COOLING PONDS
SRC PROCESS
Chemical Reactions
Retrograde reactions in SRC-I liquefaction, 8: 17043 (RA:US)

Oil Yields
Performance of coal liquefaction solvents in selective recycle operation, 8: 17038 (RA:US)
Organic Solvents
Performance of coal liquefaction solvents in selective recycle operation, 8: 17038 (RA:US)
Residues
Agglomeration of SRC residues, 8: 17045 (RA:US)
SRC-II PROCESS
Program Management
Uneconomical practices of the purchasing function at the Pittsburgh and Midway Coal Company, 8: 17199 (R:US)
SRRC-UTR-100 REACTOR
Modifications
Upgrading power of the Scottish Universities Research Reactor to 300 kW thermal. Part 3: Commissioning and post commissioning report, 8: 17913 (R:US)
STAINLESS STEEL-304
Electrochemical Corrosion
Regional Meeting on Chemistry - Book of abstracts, 8: 18305 (R:BR:In Portuguese)
Friction
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)
Permeability
Ion-gun tritium-permeation testing, 8: 19332 (R:US)
Stress Corrosion
Twenty-six-inch pipe NDE instrument surveillance test, 8: 17801 (R:US)
Wear
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)
STAINLESS STEEL-316
Creep
Acceleration of irradiation creep with fluence: absence of a definitive microstructural record, 8: 19315 (RA:US)
Fatigue
Ion-bombardment effects on the fatigue life of stainless steel under simulated fusion first-wall conditions, 8: 19325 (R:US)
Fractures
Effect of helium irradiation on fracture modes, 8: 19313 (RA:US)
Fundamental flow and fracture analysis of prime candidate alloy (PCA) for path a (austenitics), 8: 19312 (RA:US)
Hardness
Fundamental flow and fracture analysis of prime candidate alloy (PCA) for path a (austenitics), 8: 19312 (RA:US)
Microstructure
Influence of helium injection schedule and prior thermomechanical treatment on the microstructure of ion-irradiated type 316 stainless steel, 8: 19317 (RA:US)
Physical Radiation Effects
Effect of irradiation on phosphorus segregation, 8: 18266 (R:US)
Microstructural and microchemical comparisons of AISI 316 irradiated in HFIR and EBR-II, 8: 19316 (RA:US)
Swelling
Microstructural and microchemical comparisons of AISI 316 irradiated in HFIR and EBR-II, 8: 19316 (RA:US)
Void swelling of proton-irradiated stainless steel at large displacement levels, 8: 19319 (RA:US)
Voids
Void swelling of proton-irradiated stainless steel at large displacement levels, 8: 19319 (RA:US)
STAINLESS STEEL-316L
Crack Propagation
Fatigue crack propagation at high temperature (550°C) in stainless steel type 316 L, 8: 18245 (R:FR:In French)
STAINLESS STEELS
See also STAINLESS STEEL-304
STAINLESS STEEL-316
STAINLESS STEEL-316L
Electroplating
Copper plating 300 series stainless steel (Engineering Materials), 8: 18277 (E:US)
Laser-Radiation Heating
Investigation on the absorptance of stainless steel targets irradiated by a tea-co2 laser, 8: 18243 (R:US)
Stress Corrosion
Effect of sensitization and cold work on stress corrosion susceptibility of austenitic stainless steels in boiling water reactor (BWR) and pressurized water reactor (PWR) conditions, 8: 18262 (R:FI)
STANDARDS
See also CALIBRATION STANDARDS
Recommendations
Carbon monoxide hot spot guidelines. Volume 1: techniques, 8: 18704 (R:US)
STANDING CROP
See BIOMASS
STANFORD 1.2-GEV LINAC
Waveguides
Waveguide high-power switch (Engineering Materials), 8: 18503 (E:US)
STANFORD 20-GEV LINAC
Control Systems
SLAC accelerator automatic phasing system (Engineering Materials), 8: 18500 (E:US)
Phase Stability
SLAC accelerator automatic phasing system (Engineering Materials), 8: 18500 (E:US)
Waveguides
Waveguide, waveguide valve, flanges and gaskets, directional coupler and accelerator (Engineering Materials), 8: 18511 (E:US)
STANFORD LINEAR ACCELERATOR CENTER
Radiation Detectors
SLAC Mark III detector muon steel (Engineering Materials), 8: 18507 (E:US)
STARVATION
See FASTING
STATE BUILDINGS
See PUBLIC BUILDINGS
STATE GOVERNMENT
Radiation Monitoring
Report of state and local radiological health programs fiscal year 1980. Annual report, 8: 18866 (R:US)
STATIC RESERVOIR PRESSURE
See RESERVOIR PRESSURE
STATIONARY POLLUTANT SOURCES
Used for general articles when sources are not named. See also specific stationary sources, e.g., Fossil-fuel Power Plants.
Air Pollution Control
Control techniques for particulate emissions from stationary sources - Volume 2. Final report, 8: 18676 (R:US)
Control techniques for particulate emissions from stationary sources - Volume 1. Final report, 8: 18677 (R:US)
Exhaust Gases
Compilation of air pollutant emission factors, third edition (including supplements 1-7) supplement 10, 8: 18619 (R:US)
STATISTICAL MECHANICS
Lie Groups
Lie-admissible structure of statistical mechanics, 8: 19276 (J:US)
STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.
Data Base Management
Index encoding: a compression technique for large statistical databases, 8: 19372 (R:US)
Logical and physical modeling and design of scientific and statistical databases for energy research. Progress report, 8: 19370 (R:US)
Methodology for view integration in logical database design, 8: 19363 (R:US)
SAM: a semantic association model for corporate and scientific/statistical databases, 8: 19373 (R:US)
STEAM
Explosions
Steam explosion - physical foundations and relation to nuclear reactor safety, 8: 17947 (R:DE:In German)

Supersonic Flow
Vacuum chamber with a supersonic flow aerodynamic window (Patent), 8: 18466 (P:US)

STEAM COOLANT
See STEAM

STEAM GENERATORS
Corrosion Products
Solid-state and solution chemistry in the study of metal oxides behavior in steam generators, 8: 17811 (R:IT:IT)
Heat Transfer
Completion of a simulation model for calculation of static and dynamic behaviour of steam generators and its use for a pilot steam generator, 8: 17761 (R:DE:In German)
Mathematical Models
Completion of a simulation model for calculation of static and dynamic behaviour of steam generators and its use for a pilot steam generator, 8: 17761 (R:DE:In German)
Supports
Steam-generator support-plate radiographic evaluation system. Final report (PWR), 8: 17824 (R:US)
Test Facilities
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report (PWR), 8: 17826 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report (PWR), 8: 17827 (R:US)
Tubes
Eddy-current inspection for steam-generator tubing program. Quarterly progress report for period ending September 30, 1982 (PWR), 8: 17841 (R:US)
Eddy-current NDE for intergranular attack. Final report (PWR), 8: 17831 (R:US)
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)
Optical probe for steam-generator-tube dent measurement. Final report (PWR), 8: 17832 (R:US)
Prototype EMAT system for inspection of steam generator tubing. Final report (PWR), 8: 17825 (R:US)
Steam generators: the effort to prevent tube deterioration, 8: 17848 (J:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report (PWR), 8: 17826 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report (PWR), 8: 17827 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 3. Appendix T. Final report (PWR), 8: 17828 (R:US)
Water Chemistry
Steam generators: the effort to prevent tube deterioration, 8: 17848 (J:US)

STEAM INJECTION
Field Tests
Thermal efficiency of a steam injection test well with insulated tubing, 8: 17217 (R:US)
Pipes
Thermal efficiency of a steam injection test well with insulated tubing, 8: 17217 (R:US)

STEAM SEPARATORS
Flowmeters
Calibration of instrumented steam separators to determine quality and flow distribution in an operating steam generator. Final report (PWR), 8: 17823 (R:US)

STEAM TURBINES
Coverings
Full-scale turbine-missile-casing tests. Final report (PWR; BWR), 8: 17797 (R:US)
Failures
Full-scale turbine-missile-casing tests. Final report (PWR; BWR), 8: 17797 (R:US)
Lubricants
Fire-retardant lubricant for turbine generators. Final report (PWR), 8: 17829 (R:US)
Missile Protection
Full-scale turbine-missile-casing tests. Final report (PWR; BWR), 8: 17797 (R:US)

STEEL INDUSTRY
See METAL INDUSTRY

STEEL-22NIM0CR37
See STEEL-DIN-1-6751

STEEL-ASTM-A106
Stress Corrosion
General and localized corrosion of carbon and low-alloy steels in oxygenated high-temperature water. Final report, 8: 17800 (R:US)

STEEL-ASTM-A508
Stress Corrosion
General and localized corrosion of carbon and low-alloy steels in oxygenated high-temperature water. Final report, 8: 17800 (R:US)

STEEL-ASTM-A533
Stress Corrosion
General and localized corrosion of carbon and low-alloy steels in oxygenated high-temperature water. Final report, 8: 17800 (R:US)

STEEL-ASTM-A533-B
Embrittlement
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8: 17796 (R:US)
Physical Radiation Effects
Feasibility of and methodology for thermal annealing an embrittled reactor vessel. Volume 1. Program overview. Final report, 8: 17796 (R:US)

STEEL-DIN-1-6310
Electroslag Welding
Study of plasma arc welded reactor materials. Plasma arc welding using hot wire electrodes, 8: 18254 (R:DE:In German)

STEEL-DIN-1-6751
Electroslag Welding
Study of plasma arc welded reactor materials. Plasma arc welding using hot wire electrodes, 8: 18254 (R:DE:In German)

STEELS
See also AUSTENITIC STEELS
STAINLESS STEELS
STEEL-ASTM-A508
STEEL-ASTM-A533
Corrosion Fatigue
Corrosion fatigue of offshore and ship-building steels, 8: 18263 (R:DE)
Embrittlement
The combined effects of mean stress and aggressive environments on fatigue crack growth. Final technical report, 8: 18242 (R:US)
Fatigue
The combined effects of mean stress and aggressive environments on fatigue crack growth. Final technical report, 8: 18242 (R:US)
Physical Radiation Effects
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, January 1982-March 1982, 8: 17803 (R:US)

STELLARATOR TYPE REACTORS
Design
Design features of T-2, a torsatron reactor with continuous, demountable coils, 8: 19322 (R:US)

STELLARATORS
See also TORSATRON STELLARATOR
ECR Heating
Observation of magnetized-ion thermal effects on lower-hybrid waves, 8: 19296 (R:US)
Electron-Ion Collisions
Atomic physics processes in radial transport calculations, 8: 19294 (R:US)
Ion-Atom Collisions
Atomic physics processes in radial transport calculations, 8: 19294 (R:US)
Magnet Coils
Modular coil design for UWTOR-M stellarator reactor, 8: 19330 (R:US)

STELLITE 6
Friction
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)
Wear
Sodium technology. 1 - FFTF support work: friction tests, January-March 1974, 8: 17850 (R:US)
STEM CELLS
Cryobiology
Human peripheral blood hemopoietic stem cell kinetics, migration, collection, preservation and transfusion after ionizing irradiation, 8: 18840 (BA:XE)
Transplants
Consequences of radiation exposure: evaluation and treatment of pathological effects, 8: 18911 (BA:XE)
Human peripheral blood hemopoietic stem cell kinetics, migration, collection, preservation and transfusion after ionizing irradiation, 8: 18840 (BA:XE)
STES

STOVES
Design
Commercial cooking equipment improvement. volume iii: open top, hot top and fry top ranges. Final report jan 81-apr 82, 8: 18159 (R:US)
Efficiency
Commercial cooking equipment improvement. volume iii: open top, hot top and fry top ranges. Final report jan 81-apr 82, 8: 18159 (R:US)
Gas Appliances
Commercial cooking equipment improvement. volume iii: open top, hot top and fry top ranges. Final report jan 81-apr 82, 8: 18159 (R:US)
STRAIN GAGES
Failures
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)
Performance
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)
Reliability
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)
STRAND BREAKS
Radioinduction
Repair and induction of chromosome aberrations and point mutations in mammalian somatic cells: a summary and perspective, 8: 18953 (BA:US)
STRATEGIC PETROLEUM RESERVE
Feasibility and cost of interim storage for the Strategic Petroleum Reserve, 8: 17252 (R:US)
STRATOSPHERE
Photochemistry
Summary of photochemical and radiative data used in the LLNL one-dimensional transport-kinetics model of the troposphere and stratosphere: 1982, 8: 19049 (R:US)
STRAW
Gasification
Saarberg district heating process, 8: 17558 (RA:DE:In German)
Materials Handling
Handling and storage of chopped straw for heating purposes. Final report, 8: 17573 (R:US)
Storage
Handling and storage of chopped straw for heating purposes. Final report, 8: 17573 (R:US)
STREAMS
Eutrophication
A conceptual model of primary productivity in shallow streams using biomass simulation. Technical completion report, 8: 18756 (R:US)
Hydrology
Hydrologic and hydrodynamic aspects of low-level radioactive waste disposal to streams, 8: 17387 (RA:US)
Monitoring
Hydrologic and hydrodynamic aspects of low-level radioactive waste disposal to streams, 8: 17387 (RA:US)
Stream water quality in the coal region of Ohio. General technical report (final), 8: 17131 (R:US)
Stream water quality in the coal region of Tennessee. General technical report (final), 8: 17132 (R:US)
Stream water quality in the coal region of Virginia. Final report, 8: 17134 (R:US)
Sampling
Stream water quality in the coal region of eastern Kentucky. General technical report (final), 8: 17128 (R:US)
Water Pollution Control
A conceptual model of primary productivity in shallow streams using biomass simulation. Technical completion report, 8: 18756 (R:US)
Water Quality
Stream water quality in the coal region of eastern Kentucky. General technical report (final), 8: 17128 (R:US)
Stream water quality in the coal region of Virginia. Final report, 8: 17134 (R:US)
STREETS
See ROADS
STREPTOMYCES
DNA-Cloning
Control of development and secondary metabolite production in streptomycetes and its possible importance in lignocellulose utilization, 8: 17582 (RA:US)

STRONG INTERACTIONS
Lie Groups
Status of the mathematical and physical studies on the Lie-admissible formulations on July 1979, with particular reference to the strong interactions, 8: 19112 (J:US)
Pauli Principle
Further studies on the recently proposed experimental test of Pauli's exclusion principle for the strong interactions, 8: 19113 (J:US)
STRONTIUM
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Distribution Functions
Studies of cesium and strontium migration in unconsolidated Canadian geological materials, 8: 18721 (R:CA)
Sorption
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
STRONTIUM 85
Excretion
Mobilization and specific decorporation of heavy alkaline earth metals, 8: 18947 (BA:XE)
Removal
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
STRONTIUM 89
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
STRONTIUM 90
Radioecological Concentration
Formation of freshwater Fe-Mn coatings on gravel and the behavior of ^{60}Co, ^{90}Sr, and ^{137}Cs in a small watershed, 8: 19023 (J:GB)
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)
Radionuclide Migration
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Removal
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
STRONTIUM IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s^{2}3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)
STRONTIUM ISOTOPES
See also STRONTIUM 85

Hydration
Temperature dependence of molecular motion in smectic liquid crystals of hydrated sodium 4-(1'-heptylnonyl)benzenesulfonate, 8: 18355 (J:US)
Phase Transformations
Temperature dependence of molecular motion in smectic liquid crystals of hydrated sodium 4-(1'-heptylnonyl)benzenesulfonate, 8: 18355 (J:US)
SULFUR
Atom-Molecule Collisions
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8: 19051 (R:US)
Chemical Reactions
Improved method for preparing rare earth sesquichalcogenides, 8: 18344 (P:US)
Ion Spectroscopy
X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982, 8: 19063 (R:US)
Ion-Atom Collisions
X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982, 8: 19063 (R:US)
Molecule-Molecule Collisions
Collision-induced energy transfer in the b state of diatomic sulfur. Technical report, 8: 19051 (R:US)
PIXE Analysis
Preliminary data on atmospheric aerosol of the Amazon basin, 8: 18604 (R:BR)

Trace-elements of the atmospheric aerosol of the Amazon basin, 8: 18602 (R:BR)
Retention
CaO interaction in the staged combustion of coal. Ninth quarterly technical progress report, October 1, 1982-December 31, 1982, 8: 17185 (R:US)
SULFUR 32 REACTIONS
Fusion Reactions
Identification of new isotopes with a time-of-flight mass spectrometer and total βi decay energy measurement of these nuclei in the deformation region N=Z=40, 8: 19155 (R:FR:In French)
SULFUR 32 TARGET
Alpha Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Deuteron Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Proton Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
SULFUR 33 TARGET
Alpha Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Deuteron Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Proton Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
SULFUR 34 TARGET
Alpha Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Deuteron Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
Proton Reactions
Cross sections of nuclear reactions induced by protons, deuterons, and alpha particles. VII - Sulphur, 8: 19154 (R:FR:In French)
SULFUR DIOXIDE
Air Pollution Control
Acid rain: control strategies for coal-fired utility boilers. Volume I, 8: 17103 (R:US)
Commercial coal liquefaction plant technical aspects of a prefeasibility study (FRG; includes use of part coal and part residual oil fuel; the latter is more competitive), 8: 17037 (RA:US)
Costs of sulfur dioxide, particulate matter, and nitrogen oxide controls on fossil fuel fired industrial boilers. Final report, 8: 18482 (R:US)
Forced-oxidation demonstration at the TVA Widows Creek Unit 8 FGD System. Final report Apr 78-Nov 81, 8: 17777 (R:US)
Performance of chemical cartridge, half-mask respirators under working conditions in a copper smelter. Final report, 8: 18617 (R:US)
Shell NO/sub x//SO_2 flue gas treatment process: independent evaluation. Final report Feb 80-Feb 82, 8: 18483 (R:US)
Atmospheric Chemistry
Cloudwater acidity measurements and formation mechanisms: experimental design, 8: 18588 (R:US)
Measurement and analysis of the evolution of the ^{85}Kr activity in the atmosphere, and study of the synergistic effect of ^{85}Kr and chemical pollution, 8: 18701 (BA:XE)
Biological Effects
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Corrosive Effects
High-temperature corrosion of iron in sulfur-containing atmospheres (CO_2-10% SO_2 at 871°C), 8: 18260 (R:US)
Ecological Concentration
Time-series analysis for identification of particle-emission sources, 8: 18589 (R:US)
Economic Impact
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Health Hazards
Evaluation of CHESS: Utah asthma study, 1971-1972. Final report, 8: 18601 (R:US)
Monitoring
Air pollution emission test. Volume I. first interim report: continuous sulfur dioxide monitoring at steam generators, 8: 18624 (R:US)
Gas-sensitive semiconductor field-effect sensors. Final report, 8: 18665 (R:US)
Maps depicting nonattainment areas pursuant to Section 107 of the Clean Air Act - 1982, 8: 18618 (R:US)
Quality Assurance in Support of Energy Related Monitoring Activities: annual report No. 3, 8: 18636 (R:US)
Removal
Efficiency of buffered aqueous carboxylic acid solutions and organic solvents to absorb SO_2 from industrial flue gas; solubility data from gas-liquid chromatography, 8: 17770 (R:US)
Lime FGD systems data book: second edition. Final report, 8: 17104 (R:US)
Solubility
Solubilities of small molecules in liquid krypton, 8: 18338 (J:US)
Spatial Distribution
Siting field research in the western Kentucky energy development region: an exploration of a regional approach. Environmental Sciences Division, Publication No. 2089, 8: 18607 (R:US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Chemical Reaction Kinetics
Kinetics of oxidation of aqueous sulfur(IV) by nitrogen dioxide, 8: 18587 (R:US)
Ion Spectroscopy
X-ray emission in heavy-ion collisions. Progress report, March 1, 1981-February 28, 1982, 8: 19063 (R:US)
Ion-Atom Collisions
Simultaneous electron capture and excitation in ion-atom collisions, 8: 19053 (R:US)
SULFUR OXIDES
See also SULFUR DIOXIDE
SULFUR TRIOXIDE
Air Pollution Control
Sulfur oxides control technology in Japan, 8: 18659 (R:US)
Atmospheric Chemistry
Atmospheric sulfur deposition: environmental impact and health effects (Lead abstract), 8: 18688 (B:US)
Environmental Effects
Atmospheric sulfur deposition: environmental impact and health effects (Lead abstract), 8: 18688 (B:US)
Environmental Transport
Atmospheric sulfur deposition: environmental impact and health effects (Lead abstract), 8: 18688 (B:US)
Health Hazards
Atmospheric sulfur deposition: environmental impact and health effects (Lead abstract), 8: 18688 (B:US)
Meetings
Atmospheric sulfur deposition: environmental impact and health effects (Lead abstract), 8: 18688 (B:US)
Monitoring
National air pollutant emission estimates, 1970-1978. Final report, 8: 18623 (R:US)

SULFUR SULFIDES
See SULFUR
SULFUR TRIOXIDE
Decomposition
Catalytic cartridge SO_3 decomposer (Patent), 8: 17484 (P:US)
SULFURIC ACID
Aerosol Generators
Pulmonary effects of acid sulfate inhalation in the guinea pig, 8: 18967 (R:US)
Biological Effects
Effects of simulated sulfuric acid rain on yield, growth, and foliar injury of several crops, 8: 18974 (R:US)
Lung-clearance mechanisms following inhalation of acid sulfates, 8: 18968 (R:US)
Environmental Effects
Consequences of sulfuric acid inputs to a forest soil, 8: 18715 (BA:US)
Inhalation
Pulmonary effects of acid sulfate inhalation in the guinea pig, 8: 18967 (R:US)
Toxicity
Pulmonary effects of acid sulfate inhalation in the guinea pig, 8: 18967 (R:US)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPER PHENIX REACTOR
Reactor Cores
Study on nuclear and thermal analysis of FBR initial core, 8: 17852 (R:KR:In Korean)
Reactor Safety
Study on nuclear and thermal analysis of FBR initial core, 8: 17852 (R:KR:In Korean)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING FILMS
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow, 8: 19072 (R:DE:In German)
SUPERCONDUCTING MAGNETS
Cooling Systems
2.6°K refrigeration system for CBA magnet testing, 8: 18396 (R:US)
Data Acquisition Systems
Low-level signal data acquisition for the MFTF superconducting magnet, 8: 19345 (RA:US)
Dipoles
Design of a 10-T superconducting dipole magnet using niobium-tin conductor, 8: 18399 (R:US)
SUPERCONDUCTING WIRES
Design
Multiwire conductor having increased interwire resistance and good mechanical stability and method for making same, 8: 18419 (P:US)
Fabrication
Manufacture and evaluation of Nb_3Sn conductors fabricated by the MJR method, 8: 18412 (R:US)
Multiwire conductor having increased interwire resistance and good mechanical stability and method for making same, 8: 18419 (P:US)
SUPERCONDUCTIVITY
Molecular Orbital Method
Molecular-orbital basis for superconductivity in high- and low-dimensional metals. Interim technical report, 8: 19261 (R:US)
SUPERCONDUCTORS
Physical Radiation Effects
Irradiation effects for in-situ composite conductors (Nb_3Sn-Cu), 8: 18244 (R:US)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERCRITICAL GAS EXTRACTION
Hydrogenation
Extraction of coal with solvents in liquid and supercritical state under non-hydrogenating and hydrogenating conditions, 8: 17008 (R:DE:In German)
SUPERHILAC
Ion Beam Injection
High intensity uranium beams from the superHILAC and the bevatron: final report, 8: 18497 (R:US)
RF Systems
Low-cost megawatt RF power sources for linear accelerators to 70 MHz and above, 8: 18485 (R:US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTS
Cracks
Steam-generator support-plate radiographic evaluation system. Final report (PWR), 8: 17824 (R:US)
Fractures
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)
Heat Transfer
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report (PWR), 8: 17826 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report (PWR), 8: 17827 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 3. Appendix T. Final report (PWR), 8: 17828 (R:US)
Hydraulics
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report (PWR), 8: 17826 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report (PWR), 8: 17827 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 3. Appendix T. Final report (PWR), 8: 17828 (R:US)
In-Service Inspection
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)
Nondestructive Testing
Steam-generator support-plate radiographic evaluation system. Final report (PWR), 8: 17824 (R:US)
SURFACE MINING
Draglines
Optimal dragline operating techniques. Volume V. Appendices A through C. Phase I. Computer printouts. Final report, 8: 17165 (R:US)
Optimal dragline operating techniques. Volume VI. Appendices G through H. Phase II. Computer printouts. Final report, 8: 17166 (R:US)
Optimal dragline operating techniques. Volume I. Executive summary. Final report, 8: 17142 (R:US)
Optimal dragline operating techniques. Volume III. Dragline simulation models user's manual. Final report, 8: 17144 (R:US)
Optimal dragline operating techniques. Volume II. Dragline optimization methods and results. Final report, 8: 17143 (R:US)
Optimal dragline operating techniques. Volume IV. Addendum: computer program job control. Final report, 8: 17145 (R:US)
Optimal dragline operating techniques. Volume VI. Appendices D through F, Phase II computer printouts. Final report (Computer printouts, see abstract for Vol. 1), 8: 17167 (R:US)
Explosive Fracturing
Study of the mechanisms of fragmentation and vibration in blasting operations. Final report, 8: 17146 (R:US)
Land Reclamation
A guide for enhancement of fish and wildlife on abandoned mine lands in the eastern United States. Final report, 8: 17125 (R:US)
Regulations
Small surface coal mine operators handbook. Final report, 8: 17200 (R:US)
SURFACE WATERS
See also ESTUARIES
LAKES
SEAS
STREAMS
WATER RESERVOIRS

Air-Water Interactions
Theoretical and experimental investigations on the heat transport from free water surfaces, 8: 18740 (R:DE:In German)
Heat Transfer
Theoretical and experimental investigations on the heat transport from free water surfaces, 8: 18740 (R:DE:In German)
Hydrology
Surface water considerations for low-level radioactive waste site, 8: 17386 (RA:US)
Isotope Ratio
Chemical transport beneath a uranium mill tailings pile, Riverton, Wyoming, 8: 17426 (R:US)
Radionuclide Migration
Effect of releases from near-surface low-level waste sites on surface water quality, 8: 17388 (RA:US)
Water Quality
Effect of releases from near-surface low-level waste sites on surface water quality, 8: 17388 (RA:US)

SURFACE-ACTIVE AGENTS
See SURFACTANTS

SURFACES
Photoacoustic Spectroscopy
Photoacoustic spectroscopy of chemically modified surfaces. Doctoral thesis, 8: 18306 (R:US)
Thermal Radiation
Thermal radiation from hot surfaces measured by optical and calorimetric methods. Master's thesis, 8: 17678 (R:US)

SURFACTANTS
Hydration
Temperature dependence of molecular motion in smectic liquid crystals of hydrated sodium 4-(1'-heptylnonyl)benzenesulfonate, 8: 18355 (J:US)
Phase Transformations
Temperature dependence of molecular motion in smectic liquid crystals of hydrated sodium 4-(1'-heptylnonyl)benzenesulfonate, 8: 18355 (J:US)

SYNTHETIC PETROLEUM
Cost
Survey of synfuel technology for lignite, 8: 17023 (R:US)
Fuel Substitution
Increased automobile fuel efficiency and synthetic fuels: alternatives for reducing oil imports, 8: 17255 (R:US)
Market
Survey of synfuel technology for lignite, 8: 17023 (R:US)

SYNTHETIC FUELS REFINERIES
Environmental Impacts
Siting field research in the western Kentucky energy development region: an exploration of a regional approach. Environmental Sciences Division, Publication No. 2089, 8: 18607 (R:US)

SYNTHETIC PETROLEUM
Meetings
Upgrading of synthetic crudes. Chemistry of oxygenates in fuels. General papers: poster session. Surface science of catalysis: physical and catalytic properties of supported chromium. Surface science of catalysis: temperature-programmed studies of porous catalysts. Feeds, fuels and chemicals from wood and agricultural residues. Lignocellulose-derived chemicals for enhanced oil recovery, 8: 17072 (B:US)

SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

T

T INVARIANCE
Eigenvalues
Eigenvalue problem for Hermitian matrices with time-reversal symmetry, 8: 19262 (R:US)
TAILINGS
Solid residue separated in the preparation of various products.
See also MILL TAILINGS
Cost
Cost of implementing AECB interim criteria for the closeout of uranium tailings sites. A report prepared for the Atomic Energy Control Board, 8: 17366 (R:CA)
TANDEM MIRROR DEVICES
See TMX DEVICES
TANK FARMS
See STORAGE FACILITIES
TANTALUM
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Photoneutrons
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Photonuclear Reactions
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Proton Transport
Geometrical effect on stopping power measurement (angle dependent energy loss) of 7 MeV protons, 8: 19209 (RA:US)
TANTALUM 181 TARGET
Carbon 12 Reactions
Mechanisms of alpha emitter production in ^{12}C induced reactions at 1 GeV, 8: 19176 (R:FR)
Neon 22 Reactions
γ-multiplicity at fast α-particle emission in the $^{22}Ne + {}^{181}Ta$ reaction, 8: 19178 (R:XJ:In Russian)
Neutron Reactions
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{118}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)
Proton Reactions
Parametrization of neutron experimental spectra from the (p,n), (n,n') reactions on ^{118}In and ^{181}Ta nuclei, 8: 19171 (RA:SU:In Russian)
TAR SAND OIL
See BITUMENS
TAR SANDS
See OIL SANDS
TARGET CHAMBERS
Engineering Drawings
Description of sliding-seal scattering chamber (Engineering Materials), 8: 18510 (E:US)
TATB
Amination
Formulation and evaluation of RX-03-DY made from water-aminated TATB. Process development endeavor No. 101, 8: 18560 (R:US)
Impurities
Quantitative analysis of TATB impurities by thin layer chromatography. Process development endeavor No. 205, 8: 18561 (R:US)
Quantitative Chemical Analysis
Quantitative analysis of TATB impurities by thin layer chromatography. Process development endeavor No. 205, 8: 18561 (R:US)
TAUTOMERISM
See ISOMERIZATION
TAXES
See also SEVERANCE TAX
Economic Impact
Survey analysis of the impact of conservation and solar tax credits. Final report, 8: 18007 (R:US)
TEA

Planning
Energy models for generation planning and midterm operation of hydrothermal power systems, 8: 18112 (R:DE:In German)
Steam economics: guidelines on planning, generation, and conservation, 8: 17765 (R:US)
THERMAL PROPERTIES
See THERMODYNAMIC PROPERTIES
THERMAL SPRINGS
Geochemical Surveys
Thermal and mineral spring investigations, 8: 17695 (RA:US)
THERMAL STORAGE
See HEAT STORAGE
THERMIONIC EMITTERS
Work Functions
Thermionic-emission microscopy of polycrystalline molybdenum and Mo-$LaCrO_3$ (Mo-$LaCrO_3$), 8: 18130 (R:US)
THERMIONIC TUBES
Electron-emission characteristics of tungsten alloys: Mee 492 (No data; plasma anode tube), 8: 18252 (R:US)
THERMOCOUPLES
Failures
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)
Performance
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)
Reliability
Instrument reliability for high-level nuclear-waste-repository applications, 8: 17418 (R:US)
THERMODYNAMIC PROPERTIES
Thermochemistry in nuclear engineering, 8: 18337 (R:DD:In German)
THERMODYNAMICS
Computer Calculations
Thermodynamic consistency test procedure using orthogonal collocation and the Peng-Robinson equation of state, 8: 18336 (R:US)
THERMOELASTICITY
Variational Methods
Variational formulation for linear models in coupled dynamic thermoelasticity, 8: 18401 (R:BR:In Spanish)
THERMOLUMINESCENT DOSEMETERS
TELDE thermoluminescent dosimetry system, 8: 18538 (R:SU)
Materials
Underlying parameters in dosimetry, 8: 19250 (BA:XE)
THERMONUCLEAR DEVICES
Neutron Emission
Detectors for the investigation of neutron emission of thermonuclear devices, 8: 19291 (RA:SU:In Russian)
Reviews
Current state of magnetic-fusion energy research, 8: 19340 (R:US)
THERMONUCLEAR FUELS
Chemical Reaction Kinetics
Reaction of liquid and solid D_2-T_2, 8: 17471 (J:GB)
Coulomb Scattering
Effects of nuclear elastic scattering and modifications of ion-electron equilibration power on advanced-fuel burns, 8: 19329 (R:US)
Elastic Scattering
Effects of nuclear elastic scattering and modifications of ion-electron equilibration power on advanced-fuel burns, 8: 19329 (R:US)
Health Hazards
Health and safety impacts of renewable, geothermal, and rusion energy, 8: 18808 (BA:US)
Occupational Safety
Health and safety impacts of renewable, geothermal, and rusion energy, 8: 18808 (BA:US)
THERMONUCLEAR IGNITION
Plasma fluctuations and confinement of fusion reaction products, 8: 19352 (J:US)
THERMONUCLEAR REACTIONS
Catalysts
Experimental investigation of muon-catalyzed fusion, 8: 19334 (R:US)
THERMONUCLEAR REACTOR COOLING SYSTEMS
Failures
Consequences of a tube rupture in a fusion-reactor blanket, 8: 19331 (R:US)
Pipes
Analysis of fusion-blanket cooling-tube ruptures, 8: 19333 (R:US)
THERMONUCLEAR REACTOR MATERIALS
Annealing
Theory of pulsed-irradiation microstructures, 8: 19338 (R:US)

Creep
Acceleration of irradiation creep with fluence: absence of a definitive microstructural record, 8: 19315 (RA:US)
Defects
Theory of pulsed-irradiation microstructures, 8: 19338 (R:US)
Fatigue
Ion-bombardment effects on the fatigue life of stainless steel under simulated fusion first-wall conditions, 8: 19325 (R:US)
Fractures
Effect of helium irradiation on fracture modes, 8: 19313 (RA:US)
Fundamental flow and fracture analysis of prime candidate alloy (PCA) for path a (austenitics), 8: 19312 (RA:US)
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Hardness
Fundamental flow and fracture analysis of prime candidate alloy (PCA) for path a (austenitics), 8: 19312 (RA:US)
Impact Strength
Developments in small-scale strength and impact testing, 8: 19311 (RA:US)
Impact Tests
Developments in small-scale strength and impact testing, 8: 19311 (RA:US)
Microstructure
Development of anisotropic distributions of network dislocation burgers vectors in alloys irradiated under stress, 8: 19314 (RA:US)
Influence of helium injection schedule and prior thermomechanical treatment on the microstructure of ion-irradiated type 316 stainless steel, 8: 19317 (RA:US)
Theory of pulsed-irradiation microstructures, 8: 19338 (R:US)
Physical Radiation Effects
Microstructural and microchemical comparisons of AISI 316 irradiated in HFIR and EBR-II, 8: 19316 (RA:US)
Research Programs
Damage analysis and fundamental studies. Quarterly progress report, July-September 1982, 8: 19308 (R:US)
Swelling
Microstructural and microchemical comparisons of AISI 316 irradiated in HFIR and EBR-II, 8: 19316 (RA:US)
Test Facilities
Correlation of charged particle and neutron-induced radiation damage: tne ADIP experiment revisited, 8: 19318 (RA:US)

THERMONUCLEAR REACTOR WALLS
Permeability
Ion-gun tritium-permeation testing, 8: 19332 (R:US)

THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also LASER FUSION REACTORS
STELLARATOR TYPE REACTORS
TOKAMAK TYPE REACTORS
Computer Networks
Magnetic fusion energy and computers. The role of computing in magnetic fusion energy research and development (second edition), 8: 19321 (R:US)
Electric Generators
Assessment of potential research areas for improving rotating electrical machines for pulsed-power applications. Publication No. XM-12, 8: 19326 (R:US)
Mechanical energy storage and electromechanical energy conversion. Publication No. PN-65, 8: 19327 (R:US)
Modular Structures
Tradeoffs in the modularization of large fusion systems. Master's thesis, 8: 19307 (R:US)
Power Supplies
Pulsed-power-supply development for fusion applications: special research support agreement, 8: 19328 (R:US)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THIAMINE
Labelling
Preparation of ^{3}H-thiamine and methods of purification, 8: 18375 (RA:CS:In Czech)
Purification
Preparation of ^{3}H-thiamine and methods of purification, 8: 18375 (RA:CS:In Czech)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THORIUM
Activation Analysis
Instrumental determination of microquantities of thorium by activation with microtron bremsstrahlung, 8: 18316 (R:XJ:In Russian)
Solvent Extraction
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)

THORIUM 227
Delayed Radiation Effects
Pathogenesis of radiation-induced osteosarcomas, 8: 18857 (R:DE:In German)

THORIUM 230
Purification
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)
Recovery
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)

THORIUM 231 TARGET
Neutron Reactions
Asymmetrically deformed states of ^{231}Th, ^{232}Th, ^{233}Th during the fission process, 8: 19186 (R:FR)

THORIUM 232 TARGET
Neutron Reactions
Asymmetrically deformed states of ^{231}Th, ^{232}Th, ^{233}Th during the fission process, 8: 19186 (R:FR)

THORIUM 233 TARGET
Neutron Reactions
Asymmetrically deformed states of ^{231}Th, ^{232}Th, ^{233}Th during the fission process, 8: 19186 (R:FR)

THORIUM CYCLE
Economics
Use of thorium as an alternative nuclear fuel, 8: 17887 (R:AU)
Safety
Use of thorium as an alternative nuclear fuel, 8: 17887 (R:AU)

THORIUM D
See LEAD 208

THORIUM ISOTOPES
See also THORIUM 227
THORIUM 230
Neutron Reactions
Evaluation of the (n,2n), (n,3n) reaction cross sections on heavy nuclei with account for nonequilibrium processes, 8: 19190 (RA:SU:In Russian)

THORIUM X
See RADIUM 224

THREE MILE ISLAND-1 REACTOR
Socio-Economic Factors
Socioeconomic impacts of nuclear generating stations: Three Mile Island case study. Technical report 1 Oct 78-4 Jan 82, 8: 17883 (R:US)

THREE MILE ISLAND-2 REACTOR
Activity Levels
TMI-2 fission-product elemental and isotopic inventories, 8: 17840 (R:US)
Containment Buildings
Investigation of hydrogen-burn damage in the TMI-2 reactor building, 8: 17927 (R:US)
Cost
Preliminary analysis of the effects of the accident at Three Mile Island on Metropolitan Edison Company, 8: 17920 (R:US)
Decontamination
Control of radiolytic gases in liners of radioactive zeolites, 8: 17816 (R:US)
Technology transfer at Three Mile Island Unit 2, 8: 17923 (R:US)

Technology transfer in the DOE Three Mile Island research programs, 8: 17924 (R:US)
Electrical Equipment
Instrumentation and electrical program at TMI-2, 8: 17925 (R:US)
Fission Products
TMI-2 fission-product elemental and isotopic inventories, 8: 17840 (R:US)
In Core Instruments
Preliminary report of TMI-2 in-core instrument damage, 8: 17939 (R:US)
Legal Aspects
Technology transfer at Three Mile Island Unit 2, 8: 17923 (R:US)
Pressure Vessels
TMI-2 quick look examination, 8: 17926 (R:US)
TMI-2 reactor-vessel head removal and damaged-core-removal planning, 8: 17928 (R:US)
Radioactive Waste Processing
Control of radiolytic gases in liners of radioactive zeolites, 8: 17816 (R:US)
Technology transfer at Three Mile Island Unit 2, 8: 17923 (R:US)
Technology transfer in the DOE Three Mile Island research programs, 8: 17924 (R:US)
Reactor Accidents
Investigation of hydrogen-burn damage in the TMI-2 reactor building, 8: 17927 (R:US)
Preliminary analysis of the effects of the accident at Three Mile Island on Metropolitan Edison Company, 8: 17920 (R:US)
Technology transfer in the DOE Three Mile Island research programs, 8: 17924 (R:US)
Reactor Cores
TMI-2 fission-product elemental and isotopic inventories, 8: 17840 (R:US)
TMI-2 reactor-vessel head removal and damaged-core-removal planning, 8: 17928 (R:US)
Reactor Dismantling
TMI-2 reactor-vessel head removal and damaged-core-removal planning, 8: 17928 (R:US)
Reactor Instrumentation
Instrumentation and electrical program at TMI-2, 8: 17925 (R:US)
Remote Handling Equipment
TMI-2 quick look examination, 8: 17926 (R:US)
Remote Viewing Equipment
TMI-2 quick look examination, 8: 17926 (R:US)
Repair
Technology transfer at Three Mile Island Unit 2, 8: 17923 (R:US)
Technology Transfer
Technology transfer in the DOE Three Mile Island research programs, 8: 17924 (R:US)

THYROGLOBULIN
Radioimmunoassay
Effect of irradiation on leucocyte, hematopoiesis and thyroid - definition of new biochemical markers, 8: 18917 (BA:XE)

THYROID
Biological Radiation Effects
Dosimetric and radiobiological investigations of iodine radionuclides in the human thyroid, 8: 18931 (BA:XE)
Dosimetry
Dosimetric and radiobiological investigations of iodine radionuclides in the human thyroid, 8: 18931 (BA:XE)
Radionuclide Kinetics
Inventory of iodine-129 in the thyroid glands of pasture animals in the European Communities, 8: 18878 (BA:XE)

TIDAL POWER PLANTS
Performance
Small scale tidal power plants. part 1: performance 82-9. part 2: capital cost 82-10, 8: 17729 (R:US)

TIGHT SANDS
See PERMEABILITY
SANDSTONES

TIME PROJECTION CHAMBERS
See PROJECTION SPARK CHAMBERS

TIME-OF-FLIGHT SPECTROMETERS
Timing Circuits
Time-of-flight delay controller (Engineering Materials), 8: 18553 (E:US)

TIME-REVERSAL INVARIANCE
See T INVARIANCE

TIN
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Screen Printing
Development of technique for AR coating and nickel and copper metallization of solar cells. Final report, 8: 17544 (R:US)

TIN 112 TARGET
Proton Reactions
Proton and neutron yields from nuclei and from separated nickel and tin isotopes, 8: 19084 (R:SU:In Russian)

TIN 116
Alpha Reactions
Experimental evidence for giant multipole resonances at high excitation energies, 8: 19180 (R:FR)

TIN 118 TARGET
Argon 40 Reactions
Identification of new isotopes with a time-of-flight mass spectrometer and total βi decay energy measurement of these nuclei in the deformation region N=Z=40, 8: 19155 (R:FR:In French)

TIN 124 TARGET
Proton Reactions
Proton and neutron yields from nuclei and from separated nickel and tin isotopes, 8: 19084 (R:SU:In Russian)

TIN ALLOYS
Fabrication
Manufacture and evaluation of Nb_3Sn conductors fabricated by the MJR method, 8: 18412 (R:US)
Physical Radiation Effects
Irradiation effects for in-situ composite conductors (Nb_3Sm-Cu), 8: 18244 (R:US)

TIN CHLORIDES
Catalytic Effects
Catalytic coal liquefaction. Quarterly report, October-December 1982, 8: 17032 (R:US)

TISSUES
See also ANIMAL TISSUES
Radiation Doses
Organ and tissue doses in diagnostic radiology: a contribution to the somatic radiation exposure of the population of the Federal Republic of Germany, 8: 18950 (BA:XE)

TITANIUM
Activation Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Ion Collisions
Perturbed stationary-state description of the polarization effect in innershell ionization, 8: 19054 (RA:US)
PIXE Analysis
Preliminary data on atmospheric aerosol of the Amazon basin, 8: 18604 (R:BR)
Trace-elements of the atmospheric aerosol of the Amazon basin, 8: 18602 (R:BR)
X-Ray Fluorescence Analysis
Comparison of inorganics in three low-rank coals, 8: 17084 (R:US)

TITANIUM 46 TARGET
Neutron Reactions
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)

TITANIUM ALLOYS
See also NIMONIC PE16
Corrosion
Enviromechanical testing of Ti-grade 2 and Ti-grade 12 in basalt ground water, 8: 18267 (R:US)
Fatigue
Enviromechanical testing of Ti-grade 2 and Ti-grade 12 in basalt ground water, 8: 18267 (R:US)
Physical Radiation Effects
Enviromechanical testing of Ti-grade 2 and Ti-grade 12 in basalt ground water, 8: 18267 (R:US)
Strain Rate
Enviromechanical testing of Ti-grade 2 and Ti-grade 12 in basalt ground water, 8: 18267 (R:US)
TITANIUM BORIDES
Sintering
DARPA dynamic synthesis program: Sandia National Laboratories' program on shock-activated sintering. Second quarterly report, 8: 18281 (R:US)
TITANIUM CARBIDES
Sintering
DARPA dynamic synthesis program: Sandia National Laboratories' program on shock-activated sintering. Second quarterly report, 8: 18281 (R:US)
TITANIUM COMPLEXES
Catalytic Effects
Applications of functionalized polymers in catalysis. Final report, September 1, 1977-November 30, 1981, 8: 18349 (R:US)
TITANIUM HYDRIDES
Crystal Structure
Hydrogen mobility at high concentrations, 8: 18288 (BA:US)
TITANIUM OXIDES
Catalytic Effects
Deactivation and regeneration of hydrogenolysis activity over Rh-Ag bimetallic catalysts supported on TiO_2, 8: 18333 (R:US)
Electron Transfer
Interfacial electron-transfer reactions in colloidal semiconductor dispersions. Kinetic analysis, 8: 18343 (J:US)
Photolysis
Interfacial electron-transfer reactions in colloidal semiconductor dispersions. Kinetic analysis, 8: 18343 (J:US)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TMX DEVICES
Electron-Ion Collisions
Atomic physics processes in radial transport calculations, 8: 19294 (R:US)
Ion-Atom Collisions
Atomic physics processes in radial transport calculations, 8: 19294 (R:US)
TOBACCO SMOKES
Biological Effects
Pathogenesis of lesions induced in rat lung by chronic tobacco smoke inhalation, 8: 18986 (J:US)
TOKAI-MURA FAST CRITICAL ASSEMBLY
See FCA REACTOR
TOKAMAK DEVICES
See also TEXTOR TOKAMAK
Alfven Waves
Shear Alfven waves in tokamaks, 8: 19288 (R:US)
Electron-Ion Collisions
Atomic physics processes in radial transport calculations, 8: 19294 (R:US)
Ion-Atom Collisions
Atomic physics processes in radial transport calculations, 8: 19294 (R:US)
Magnetic Islands
Saturated tearing modes in tokamaks with divertors, 8: 19287 (R:US)
Reviews
Current state of magnetic-fusion energy research, 8: 19340 (R:US)
Tearing Instability
Saturated tearing modes in tokamaks with divertors, 8: 19287 (R:US)
X-Ray Spectra
X-ray radiation from tokamaks, 8: 19351 (BA:US)
TOKAMAK TYPE REACTORS
See also FLT DEVICES
Bundle Divertors
Constrained ripple optimization of Tokamak bundle divertors, 8: 19337 (R:US)
TOLUENE
Chemical Reaction Kinetics
Rates of reactions of $O(^3P)$ with benzene and toluene, 8: 18353 (J:US)
Pyrolysis
Identification and temporal behavior of radical intermediates formed during the combustion and pyrolysis of gaseous fuels: kinetic pathways to soot formation. Progress report, September 1, 1982-June 30, 1983, 8: 18385 (R:US)
Solvent Properties
Optimization chemistry and product analysis of supercritical gas extraction for the liquefaction of Canadian coals, 8: 17076 (B:CA)
TORNADOES
Risk Assessment
Tornado damage risk assessment, 8: 18590 (R:US)
TORSATRON STELLARATOR
Design
Design features of T-2, a torsatron reactor with continuous, demountable coils, 8: 19322 (R:US)
Specifications
Modular low-aspect-ratio high-beta torsatron (Patent), 8: 19349 (P:US)
TOTAL SUSPENDED PARTICULATES
Monitoring
Maps depicting nonattainment areas pursuant to Section 107 of the Clean Air Act - 1982, 8: 18618 (R:US)
TOWERS
Prior to August 1981, this concept was indexed to MECHANICAL STRUCTURES.
See also COOLING TOWERS
Construction
Design and construction of a folding 60-ft self-supporting tower system, 8: 17733 (R:US)
Design
Design and construction of a folding 60-ft self-supporting tower system, 8: 17733 (R:US)
TOXIC MATERIALS
Biological Effects
Automated biomonitoring applications in remote water quality surveillance and time rated toxicological assay, 8: 18752 (R:US)
Environmental Exposure Pathway
Critical considerations in the assessment of health and environmental risks: what we have learned from the nuclear experience, 8: 18725 (R:US)
National Program Plans
National toxicology program, 8: 18999 (R:US)
Research Programs
National toxicology program, 8: 18999 (R:US)
TPC

Vertical solar collector. Final report, 8: 17661 (R:US)
Phase Change Materials
Phase-change materials in masonry construction. Final report, 8: 17652 (R:US)
Retrofitting
Vertical solar collector. Final report, 8: 17661 (R:US)
TROMMELS
Performance Testing
Evaluation of trommels for waste to energy plants. Phase 2. Report of the Warren Springs Laboratory pilot plant test series, 8: 18202 (R:US)
Pilot-scale trommel: experimental test descriptions and data, 8: 18203 (R:US)
TROPICAL REGIONS
Aquatic Ecosystems
Tropical organic soils ecosystems in relation to regional water resources in southeast Asia, 8: 18791 (R:US)
Soils
Recent changes in the global carbon balance of tropical organic soils, 8: 18712 (R:US)
Tropical organic soils ecosystems in relation to regional water resources in southeast Asia, 8: 18791 (R:US)
TROPOSPHERE
Photochemistry
Summary of photochemical and radiative data used in the LLNL one-dimensional transport-kinetics model of the troposphere and stratosphere: 1982, 8: 19049 (R:US)
TRU WASTES
See ALPHA-BEARING WASTES
TRUCKS
Aerodynamics
Assessment of proprietary devices for reducing the aerodynamic drag of commercial vehicles, 8: 18221 (R:US)
Certification
Application for certification 1982 model year heavy-duty diesel engines - General Motors, 8: 18226 (R:US)
Application for certification 1982 model year heavy-duty engines - International Harvester, 8: 18227 (R:US)
Application for certification 1982 model year heavy-duty engines - isuzu, 8: 18228 (R:US)
Application for certification 1982 model year heavy-duty engines - Mack Trucks, inc, 8: 18229 (R:US)
Application for certification 1982 model year heavy-duty diesel engines - Mercedes-Benz, 8: 18230 (R:US)
Application for certification 1982 model year heavy-duty diesel engines - Mitsubishi, 8: 18231 (R:US)
Diesel Engines
Application for certification 1982 model year heavy-duty diesel engines - Caterpillar, 8: 18171 (R:US)
Drag
Aerodynamic drag of commercial vehicles, 8: 18175 (R:US)
Exhaust Gases
Medium duty vehicle emission control cost effectiveness comparisons. volume i. executive summary. Final report, 8: 18238 (R:US)
Fuel Consumption
Assessment of proprietary devices for reducing the aerodynamic drag of commercial vehicles, 8: 18221 (R:US)
Energy consumption and heavy-duty vehicles, 8: 18178 (TG:US)
Pollution Abatement
The evolution of the industrial vehicle by the year 2000, 8: 18179 (TG:US)
TSL PROCESS
Combustion evaluation of residual fuel oil from two-stage liquefaction. Final report, 8: 17187 (R:US)
Autoclaves
Integrated bench-scale studies: process variations in two-stage coal liquefaction, 8: 17041 (RA:US)
Bench-Scale Experiments
Integrated bench-scale studies: process variations in two-stage coal liquefaction, 8: 17041 (RA:US)
Flowsheets
Integrated bench-scale studies: process variations in two-stage coal liquefaction, 8: 17041 (RA:US)
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)
Oil Yields
Catalytic hydrogenation of SRC-I product at Wilsonville Pilot Plant (Nonintegrated), 8: 17042 (RA:US)
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)
Process Development Units
Integrated bench-scale studies: process variations in two-stage coal liquefaction, 8: 17041 (RA:US)
Liquefaction of eastern bituminous coals by the integrated two-stage liquefaction (ITSL) process, 8: 17035 (RA:US)
TSP
See TOTAL SUSPENDED PARTICULATES
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Acoustic Emission Testing
Prototype EMAT system for inspection of steam generator tubing. Final report (PWR), 8: 17825 (R:US)
Corrosion
Steam generators: the effort to prevent tube deterioration, 8: 17848 (J:US)
Corrosion Denting
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)

Optical probe for steam-generator-tube dent measurement. Final report (PWR), 8: 17832 (R:US)
Eddy Current Testing
Eddy-current inspection for steam-generator tubing program. Quarterly progress report for period ending September 30, 1982 (PWR), 8: 17841 (R:US)
Film Condensation
Local heat transfer during condensation with forced convection in a vertical tube, 8: 18451 (R:DE:In German)
In-Service Inspection
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)
Optical probe for steam-generator-tube dent measurement. Final report (PWR), 8: 17832 (R:US)
Intergranular Corrosion
Eddy-current NDE for intergranular attack. Final report (PWR), 8: 17831 (R:US)
Supports
Magnetic-flux leakage for measurement of crevice-gap-clearance and tube-support-plate inspection. Final report (PWR), 8: 17830 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Final report (PWR), 8: 17826 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 2. Appendixes I through S. Final report (PWR), 8: 17827 (R:US)
Thermal-hydraulic tests of steam-generator tube-support-plate crevices. Volume 3. Appendix T. Final report (PWR), 8: 17828 (R:US)
Ultrasonic Testing
Non-intrusive ultrasonic liquid-in-line detector for small diameter tubes (Patent), 8: 18463 (P:US)

TUBES (CONDUITS)
See PIPES

TUFF
Compression Strength
Correlation of ultrasonic velocity and rock strength, 8: 19019 (R:US)
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Creep
Methodology for determining time-dependent mechanical properties of tuff subjected to near-field repository conditions, 8: 19016 (R:US)
Geochemistry
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Mechanical Properties
Methodology for determining time-dependent mechanical properties of tuff subjected to near-field repository conditions, 8: 19016 (R:US)
Permeability
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Poisson Ratio
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Porosity
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Seismic S Waves
Correlation of ultrasonic velocity and rock strength, 8: 19019 (R:US)
Sorptive Properties
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Strains
Methodology for determining time-dependent mechanical properties of tuff subjected to near-field repository conditions, 8: 19016 (R:US)
Stresses
Methodology for determining time-dependent mechanical properties of tuff subjected to near-field repository conditions, 8: 19016 (R:US)
Tensile Properties
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Thermal Stresses
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)
Young Modulus
Thermal impact of waste emplacement and surface cooling associated with geologic disposal of nuclear waste, 8: 17370 (R:US)

TUMORS
See NEOPLASMS

TUNGSTEN
Gas Production Rates
Helium generation in fusion-reactor materials. Progress report, October-December 1982, 8: 19324 (R:US)
Photoneutrons
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)
Photonuclear Reactions
Calculation of the photoneutron yield from the thick targets irradiated by 10-150 MeV electrons, 8: 19230 (RA:SU:In Russian)

TUNGSTEN BASE ALLOYS
Electron Emission
Electron-emission characteristics of tungsten alloys: Mee 492, 8: 18252 (R:US)

TUNGSTEN OXIDES
Particle Resuspension
Resuspension of particles from ground surfaces, 8: 18700 (BA:XE)

TURBINE BLADES
Computer Codes
Wind-turbine-blade stress analysis and natural frequencies (MOMENTS, FREQ), 8: 17743 (R:US)
Corrosion
Combustion-turbine design guidelines based on deposition-corrosion considerations. Volume 1. Residual-fuel-oil studies. Final report, 8: 17254 (R:US)
Fabrication
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)
Ice
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81, 8: 17738 (R:SE)
Materials
Applications of composite gas-turbine components. Final report. Phase I, 8: 17754 (R:US)
Mechanical Vibrations
Wind-turbine-blade stress analysis and natural frequencies (MOMENTS, FREQ), 8: 17743 (R:US)
Stress Analysis
Wind-turbine-blade stress analysis and natural frequencies (MOMENTS, FREQ), 8: 17743 (R:US)

TURBINES
See also GAS TURBINES
STEAM TURBINES
WIND TURBINES
Biological Effects
Potential effects of Kaplan, Ossberger and bulb turbines on anadromous fishes of the northeast United States, 8: 17528 (R:US)

TURBOGENERATORS
Lubricants
Fire-retardant lubricant for turbine generators. Final report (PWR), 8: 17829 (R:US)

TURBOJET ENGINES
Cooling
Operation behaviour of turbojet propulsion units under special consideration of the cooled high-pressure turbine, 8: 18406 (R:DE:In German)
Exhaust Gases
An investigation of the effects of smoke suppressant fuel additives on engine and test cell exhaust gas opacities. Final report for 1981, 8: 18236 (R:US)
Maintenance
Survey and update of F-14a mission profiles for TF30 engine usage. Final report, 8: 18165 (R:US)
Operation
Survey and update of F-14a mission profiles for TF30 engine usage. Final report, 8: 18165 (R:US)
Thermal Efficiency
Operation behaviour of turbojet propulsion units under special consideration of the cooled high-pressure turbine, 8: 18406 (R:DE:In German)
TURBOMACHINERY
See also TURBINES
Subsonic Flow
Contribution to the numerical flow calculation in compressor and turbine grids, 8: 18407 (R:DE:In German)
TURBULENCE
Data Acquisition
RISO 78: mean profile and turbulence measurements at a shoreline escarpment1, 8: 18595 (R:DK)
TURBULENT FLOW
Heat Transfer
Additive thermochemical effects in turbulent erosive boundary layers, 8: 18563 (R:US)
TURNOVER (RADIONUCLIDES)
See RADIONUCLIDE KINETICS
TVA
See TENNESSEE VALLEY AUTHORITY
TWO-PHASE FLOW
Bubbles
Kinetics of compressibility in two-phase fluid flows. Final report, 8: 18455 (R:US)
Compressibility
Kinetics of compressibility in two-phase fluid flows. Final report, 8: 18455 (R:US)
Computer Codes
A general purpose computer program for multidimensional one and two phase flow, 8: 18454 (R:GB)
Heat Transfer
Additive thermochemical effects in turbulent erosive boundary layers, 8: 18563 (R:US)

UPSHOT PROJECT
Personnel Dosimetry
Analysis of radiation exposure for troop observers, Exercise Desert Rock V, Operation Upshot-Knothole. Final report 1 Mar 80-28 Apr 81, 8: 18571 (R:US)
UPSILON-9500 RESONANCES
Electromagnetic Particle Decay
Measurement of R in e^+e^- annihilation for $\sqrt{s}$ between 7.4 and 9.4 GeV, 8: 19078 (R:DE)
URANIUM
Adsorption
Geochemistry studies pertaining to the G-tunnel radionuclide migration field experiment, 8: 19022 (R:US)
Biogeochemistry
Investigation of Great Basin big sagebrush and black greasewood as biogeochemical indicators of uranium mineralization. Final report. National Uranium Resource Evaluation, 8: 19021 (R:US)
Fluorescence Spectroscopy
Ultratrace analysis of actinides via coprecipitation/laser-induced fluorescence spectroscopy, 8: 18325 (R:US)
Laser Spectroscopy
Comparative evaluations of analytical methods for uranium with regard to application in exploring uranium, 8: 18313 (R:DE:In German)
Mass Spectroscopy
Ion source for high-precision mass spectrometry, 8: 18327 (P:US)
Muonic Atoms
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
Radiochemical Analysis
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Solvent Extraction
Recovery of protactinium-231 and thorium-230 from cotter concentrate: pilot plant operatins and process development, 8: 18319 (R:US)
Sorption
Evaluation of sodium bentonite and crushed basalt as waste package backfill materials, 8: 17407 (R:US)
X-Ray Fluorescence Analysis
Comparative evaluations of analytical methods for uranium with regard to application in exploring uranium, 8: 18313 (R:DE:In German)
URANIUM 233
Delayed Neutron Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Nuclear Reaction Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
URANIUM 233 TARGET
Neutron Reactions
Application of the coupled-channel optical model to the calculation of fast neutron cross sections on odd-A actinide nuclei, 8: 19187 (R:FR:In French)
Data estimated from the prompt neutron spectra of ^{233}U, ^{235}U, ^{239}Pu, ^{252}Cf fission, 8: 19188 (RA:SU:In Russian)
URANIUM 235
Delayed Neutron Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
Fission Isomers
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
Inhalation
Behaviour and carcinogenic effects of radioactive particles in the respiratory system, 8: 18938 (BA:XE)
Nuclear Reaction Analysis
Apparatus and method for quantitative assay of generic transuranic wastes from nuclear reactors, 8: 17422 (P:US)
URANIUM 235 TARGET
Muon Reactions
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
Neutron Reactions
Application of the coupled-channel optical model to the calculation of fast neutron cross sections on odd-A actinide nuclei, 8: 19187 (R:FR:In French)
Data estimated from the prompt neutron spectra of ^{233}U, ^{235}U, ^{239}Pu, ^{252}Cf fission, 8: 19188 (RA:SU:In Russian)
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Measurements of fission cross sections around 14 MeV, 8: 19189 (RA:SU:In Russian)
URANIUM 236
Fission Isomers
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
URANIUM 236 TARGET
Muon Reactions
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
URANIUM 238
Fission Isomers
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
URANIUM 238 TARGET
Muon Reactions
Search for the gamma-branch of the shape isomers of separated U isotopes using muon for nuclide excitation, 8: 19194 (R:US)
Neutron Reactions
Mean cross sections of nuclide interaction with sup(235)U+nsub(T), sup(239)Pu+nsub(T), ^{252}Cf fission prompt neutrons, 8: 19191 (RA:SU:In Russian)
Measurements of fission cross sections around 14 MeV, 8: 19189 (RA:SU:In Russian)
Taking account of finite geometry effects in epxerimental studies of the (n,n'γ) reactions, 8: 19157 (RA:SU:In Russian)
URANIUM BASE ALLOYS
Extrusion
Extrusion-formed uranium-2.4 wt. % article with decreased linear thermal expansion and method for making the same (Patent), 8: 18269 (P:US)
Thermal Expansion
Extrusion-formed uranium-2.4 wt. % article with decreased linear thermal expansion and method for making the same (Patent), 8: 18269 (P:US)
URANIUM CARBIDES
Electric Conductivity
Analytical representation of the thermal conductivity and electrical resistivity of UC/sub 1 +- x/, PuC/sub 1-x/, and (U/sub y/Pu/sub 1-y/)C/sub 1 +- x/, 8: 18282 (R:US)

Thermal Conductivity
Analytical representation of the thermal conductivity and electrical resistivity of UC/sub 1 +- x/, PuC/sub 1-x/, and (U/sub y/Pu/sub 1-y/)C/sub 1 +- x/, 8: 18282 (R:US)

URANIUM DEPOSITS
Classification
Exploration for uranium in the United States, 8: 17313 (RA:US)
Evaluation
Decision model for assessment of sandstone uranium deposits. National Uranium Resource Evaluation. Final report, 8: 17314 (R:US)
Exploration
Comparative evaluations of analytical methods for uranium with regard to application in exploring uranium, 8: 18313 (R:DE:In German)
Exploration for uranium in the United States, 8: 17313 (RA:US)
Geostatistical study of the uranium deposit at Kvanefjeld, the Ilimaussaq intrusion, South Greenland, 8: 17312 (R:DK)
Geological Surveys
Energy resources of the Denver and Cheyenne Basins, Colorado - resource characteristics, development potential, and environmental problems. Environmental Geology 12, 8: 18747 (R:US)
Neutron Logging
Method of assaying uranium with prompt fission and thermal neutron borehole logging adjusted by borehole physical characteristics (Patent), 8: 17316 (P:US)
Resource Assessment
Uranium reserve and resource assessments, 8: 17310 (RA:US)
Resource Development
Nuclear power, the uranium industry, and resource development, 8: 17311 (RA:US)

URANIUM DIOXIDE
Physical Radiation Effects
BR-3 high burnup fuel rod hot cell program. Volume 1, 8: 17814 (R:US)
Vapor Pressure
A hydrodynamic analysis of the electron beam vaporization experiments for UO2. Technical report 1 Oct 79-31 Sep 81, 8: 18283 (R:US)

URANIUM HEXAFLUORIDE
Chemical Reactions
Kinetic investigations of the reactions of ufg in the gaseous phase, 8: 18335 (R:DE:In German)
Production
Production of uranium hexafluoride by the catalyzed fluorox process: pilot plant and supporting bench-scale studies, 8: 17322 (R:AU)

URANIUM IONS
Emission Spectra
Generation and identification of U III lines. Final technical report, 8: 19065 (R:US)

URANIUM ISOTOPES
See also URANIUM 233
URANIUM 235
URANIUM 236
URANIUM 238
Neutron Reactions
Evaluation of the (n,2n), (n,3n) reaction cross sections on heavy nuclei with account for nonequilibrium processes, 8: 19190 (RA:SU:In Russian)

URANIUM MILLS
See FEED MATERIALS PLANTS

URANIUM MINES
Bacteria
Microbial ecology of Rum Jungle II: environmental study of two flooded opencuts and smaller, associated water bodies, 8: 17425 (R:AU)
Land Reclamation
Restoration of surface vegetation on uranium wastes at Uravan, Colorado. Report of investigations/1982, 8: 17429 (R:US)
Legal Aspects
Etat du droit minier et de la fiscalite des actinides dans les pays membres de la communaute (The position regarding mining rights and taxation of the actinides in the member states of the community), 8: 17344 (R:US)
Natural Radioactivity
Effect of the diurnal cycle and fan shutdowns on radon concentration in an experimental uranium mine. Report of investigations/1982, 8: 17319 (R:US)
Ownership
Changing ownership within the US minerals industry: possible causes and steps needed to determine the effects, 8: 18072 (R:US)
Radiation Monitoring
Radon emanation from stopes backfilled with cemented uranium mill tailings. Report of investigations/1982, 8: 17445 (R:US)
Radiation Protection
Sealant tests to control radon emanation in a uranium mine. Open file report sep 79-dec 81, 8: 17447 (R:US)
Radioactive Effluents
Dose exposure of the environmental population by natural and released Ra-226 and Pb-210 from an uranium mine prospect, 8: 18861 (R:DE:In German)
Tailings
Cost of implementing AECB interim criteria for the closeout of uranium tailings sites. A report prepared for the Atomic Energy Control Board, 8: 17366 (R:CA)
Taxes
Etat du droit minier et de la fiscalite des actinides dans les pays membres de la communaute (The position regarding mining rights and taxation of the actinides in the member states of the community), 8: 17344 (R:US)
Water Pollution
Microbial ecology of Rum Jungle II: environmental study of two flooded opencuts and smaller, associated water bodies, 8: 17425 (R:AU)

URANIUM ORES
Mineral Rights
Etat du droit minier et de la fiscalite des actinides dans les pays membres de la communaute (The position regarding mining rights and taxation of the actinides in the member states of the community), 8: 17344 (R:US)
Solution Mining
Analysis of groundwater criteria and recent restoration attempts after in situ uranium leaching. Open file report, 8: 17430 (R:US)
Cost and sensitivity analysis for uranium in situ leach mining. Open file report Oct 79-Mar 81, 8: 17320 (R:US)
Hydrogeologic and stratigraphic data pertinent to uranium mining, Cheyenne Basin, Colorado. Information series 12, 8: 17318 (R:US)
Promises and problems of a new uranium-mining method: in-situ solution mining. Environmental geology 11, 8: 17317 (R:US)

URANIUM OXIDE FUEL PLANT
See MIXED OXIDE FUEL FABRICATION PLANTS

URANIUM OXIDES U3O8
Production
Nuclear power, the uranium industry, and resource development, 8: 17311 (RA:US)

URANIUM RESERVES
Availability
Issues in uranium availability, 8: 17309 (R:US)
Resource Assessment
Geostatistical study of the uranium deposit at Kvanefjeld, the Ilimaussaq intrusion, South Greenland, 8: 17312 (R:DK)
Issues in uranium availability, 8: 17309 (R:US)
Uranium reserve and resource assessments, 8: 17310 (RA:US)

URBAN AREAS
Air Pollution
Evaluating simple oxidant prediction methods using complex photochemical models: cluster analysis applied to urban ozone characteristics, 8: 18634 (R:US)
Meteorological potential for urban air pollution in the contiguous United States, 8: 18655 (R:US)

Classification
Evaluating simple oxidant prediction methods using complex photochemical models: cluster analysis applied to urban ozone characteristics, 8: 18634 (R:US)
Fires
Incendiary effects on building and interior kindling fuels, 8: 18565 (R:US)
Turbulence
An experimental study of turbulence in an urban environment, 8: 18591 (R:US)

URINALYSIS
See URINE

URINE
Chemical Analysis
Recovery of radioactive iodine and strontium from human urine--operation teapot. Interim report, 8: 18716 (R:US)
Radiation Monitoring
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)
Radiochemical Analysis
Health, safety, and environmental laboratories. Progress report, January-June 1982, 8: 18324 (R:US)

US DOD
Procurement
Feasibility study to develop a marketing plan and strategy for increasing the participation of minority business enterprises and black colleges and universities in energy-related industries. Final report, 8: 17999 (R:US)

Binding Energy
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)
Stochastic calculation of interaction energies, 8: 19070 (J:US)

Chemical Analysis
A review of photo-oxidation for the determination of total organic carbon in water. Technical report, 8: 18760 (R:US)
Comparative evaluations of analytical methods for uranium with regard to application in exploring uranium, 8: 18313 (R:DE:In German)
Disposal of fly-ash alkali FGD waste in a western decoaled strip mine. Quarterly technical progress report, June 1-August 31, 1982, 8: 17122 (R:US)
Investigation of levels of organic pollutants in selected areas in the Philippines, 8: 18749 (R:PH)
Quality assurance for environmental analytical chemistry: 1981, 8: 18317 (R:US)
Studies on air and water pollution. I. Polychlorinated biphenyls and benzopyrene status report July 1977 - June 1978, 8: 18320 (R:PH)

Chemical Reaction Yield
Kinetic measurements for the reaction of NH_2 + NO over the temperature range 294 to 1215 K, 8: 18342 (J:US)

Chemical Reactions
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Compatibility
Quick setting water-compatible furfuryl alcohol polymer concretes (Patent), 8: 18303 (P:US)

Corrosive Effects
Assessment of water addition to spark ignition engines, 8: 18218 (R:US)

Gravity Waves
Water waves produced by ground motions, 8: 19273 (R:FR)

Neutron Reactions
Derivation of the generalized frequency spectra of moderator atom oscillation from experimental double differential scattering cross section of slow neutrons, 8: 19235 (RA:SU:In Russian)

Quantitative Chemical Analysis
Ultratrace analysis of actinides via coprecipitation/laser-induced fluorescence spectroscopy, 8: 18325 (R:US)

Radioactivity
Contents of radon and radium in the water from large water-works in Sweden, 8: 18774 (R:SE:In Swedish)

Radiolysis
Mechanism of water radiolysis, 8: 18366 (R:SU:In Russian)
Modeling early events in the radiation chemistry of dilute aqueous solutions, 8: 18367 (R:US)

Separation Processes
Treatment agents for separation of oil and water (Patent; mixture of $BaO.nFe_2O_4$ and $SrO.mFe_2O_4$ ferrite powder), 8: 18765 (TG:US)
Treatment agents for separation of oil and water (Patent; Ni-Cu-Zn ferrite powder), 8: 18766 (TG:US)
Treatment agents for separation of oil and water (Patent; Mn-Zn ferrite powder), 8: 18767 (TG:US)
Treatment agents for separation of oil and water (Patent; Ni-Zn ferrite powder), 8: 18768 (TG:US)
Treatment agents for separation of oil and water (Patent; Fe_3O_4 ferrite powder), 8: 18769 (TG:US)
Treatment agents for separation of oil and water (Patent; $BaO.nFe_2O_4$ ferrite powder), 8: 18770 (TG:US)
Treatment agents for separation of oil and water (Patent; Cu-Zn-Mg ferrite powder), 8: 18771 (TG:US)

Thermal Conductivity
Investigation of association reactions in polar gases using the pressure and temperature dependence of thermal conductivity, 8: 18345 (J:US)

Waste Product Utilization
Characterization, renovation, and utilization of water from slurry transport systems. Completion report 1 Oct 79-30 Sep 81, 8: 17108 (R:US)

WATER CHEMISTRY
BWR cobalt-source identification. Final report, 8: 17795 (R:US)
Steam generators: the effort to prevent tube deterioration, 8: 17848 (J:US)
WATER CONTENT
See MOISTURE
WATER COOLANT

LWBR TYPE REACTORS
NSRR REACTOR
PWR TYPE REACTORS
Loss of Coolant
FR2 in-pile tests on LWR-fuel-rod behavior with electrically heated fuel rod simulators (BSS series), 8: 17802 (R:DE:In German)
WATER CURRENT POWER GENERATORS
Data Acquisition
Tidal power from the Severn estuary. Volume 2: analysis, studies, reports and evaluations, 8: 17728 (R:GB)
Environmental Impacts
Tidal power from the Severn estuary, volume 1, 8: 17727 (R:GB)
Feasibility Studies
Tidal power from the Severn estuary, volume 1, 8: 17727 (R:GB)
Site Selection
Tidal power from the Severn estuary. Volume 2: analysis, studies, reports and evaluations, 8: 17728 (R:GB)
Socio-Economic Factors
Tidal power from the Severn estuary, volume 1, 8: 17727 (R:GB)
WATER CURRENTS
Monitoring
Analysis of current meter records at the northwest atlantic 2800 metre radioactive waste dumpsite. Final report, 8: 17431 (R:US)
WATER DEMAND
See WATER REQUIREMENTS
WATER HEATERS
See also SOLAR WATER HEATERS
Air Pollution
Environmental assessment of a low-emission oil-fired residential hot water condensing heating system. volume i: technical results. Final report Jul 80-Feb 81, 8: 18647 (R:US)
Environmental assessment of a low-emission oil-fired residential hot water condensing heating system. Volume II: data supplement. Final report Jul 80-Feb 81, 8: 18648 (R:US)
Destructive Testing
Examination and life assessment of field-tested heat-pump water heaters, 8: 18149 (R:US)
Energy Conservation
Energy conservation in the production of domestic hot water, 8: 18143 (R:GB)
Water Pollution
Environmental assessment of a low-emission oil-fired residential hot water condensing heating system. volume i: technical results. Final report Jul 80-Feb 81, 8: 18647 (R:US)
Environmental assessment of a low-emission oil-fired residential hot water condensing heating system. Volume II: data supplement. Final report Jul 80-Feb 81, 8: 18648 (R:US)
WATER HYACINTHS
Anaerobic Digestion
Water-hyacinth production primary and advanced treatment of wastewater. Final report, 8: 18210 (R:US)
Harvesting
Water-hyacinth production primary and advanced treatment of wastewater. Final report, 8: 18210 (R:US)
WATER MODERATOR
See WATER
WATER POLLUTION
Studies on air and water pollution. I. Polychlorinated biphenyls and benzopyrene status report July 1977 - June 1978, 8: 18320 (R:PH)
Distribution
Processes affecting the distribution of low-molecular-weight aliphatic hydrocarbons in Cook Inlet, Alaska. Technical memo, 8: 18761 (R:US)
Environmental Transport
Multimedia exposure assessment model data needs, 8: 18611 (R:US)
Nearshore currents in Lake Michigan between Milwaukee and Chicago, 1977-1978: implications for transport, 8: 18738 (R:US)
Monitoring
Automated biomonitoring applications in remote water quality surveillance and time rated toxicological assay, 8: 18752 (R:US)
Ecological monitoring of aqueous effluents from petroleum refineries, 8: 18764 (R:US)
Field study to obtain trace element mass balances at Kingston Steam Plant. Final report Mar 77-Jun 81, 8: 18762 (R:US)
Organic micropollutants in drinking water. Technical report, 8: 18759 (R:US)
WATER POLLUTION CONTROL
A conceptual model of primary productivity in shallow streams using biomass simulation. Technical completion report, 8: 18756 (R:US)
Treatment agents for separation of oil and water (Patent; mixture of $BaO.nFe_2O_4$ and $SrO.mFe_2O_4$ ferrite powder), 8: 18765 (TG:US)
Treatment agents for separation of oil and water (Patent; Ni-Cu-Zn ferrite powder), 8: 18766 (TG:US)
Treatment agents for separation of oil and water (Patent; Mn-Zn ferrite powder), 8: 18767 (TG:US)
Treatment agents for separation of oil and water (Patent; Ni-Zn ferrite powder), 8: 18768 (TG:US)
Treatment agents for separation of oil and water (Patent; Fe_3O_4 ferrite powder), 8: 18769 (TG:US)
Treatment agents for separation of oil and water (Patent; $BaO.nFe_2O_4$ ferrite powder), 8: 18770 (TG:US)
Treatment agents for separation of oil and water (Patent; Cu-Zn-Mg ferrite powder), 8: 18771 (TG:US)
Evaluation
Assessment of water quality conditions Ohio River main stem 1980-81, 8: 18757 (R:US)
WATER QUALITY
Management
Operational water quality management: beyond planning and design, 8: 18745 (R:AT)
Monitoring
Vienna fly ash disposal site: problem definition study. Final report, 8: 18755 (R:US)
WATER REQUIREMENTS
Crops
Correlations of estimated pumpage from the Ogallala Aquifer with modeled crop water requirements in the Texas High Plains. Final report, 8: 18793 (R:US)
Forecasting
Estimating water demand schedules for selected industries in Arkansas, 8: 18028 (R:US)
Mathematical Models
Correlations of estimated pumpage from the Ogallala Aquifer with modeled crop water requirements in the Texas High Plains. Final report, 8: 18793 (R:US)
Development of models for the planning of large-scale water-energy systems. Technical report (final), 8: 17993 (R:US)
WATER RESERVOIRS
See also COOLING PONDS
Baseline Ecology
Relations between phytoplankton growth rates and nutrient dynamics in Lake Norman, North Carolina. Technical report series, 8: 18742 (R:US)
WATER RESOURCES
Resource Development
Environmental data inventory, state of Alabama, January 1, 1981. Final report, 8: 18024 (R:US)

WATER SOURCE HEAT PUMPS
Comparative Evaluations
Comparative performance of heat pumps vs cogeneration district-heating systems, 8: 18142 (R:IT)
Economic Analysis
Use of twin wells and water-source heat pumps for energy conservation in Louisiana, 8: 18151 (R:US)
Economics
Guidebook to water-source heat pumps, 8: 18141 (R:US)
Energy Efficiency
Guidebook to water-source heat pumps, 8: 18141 (R:US)
Feasibility Studies
Use of twin wells and water-source heat pumps for energy conservation in Louisiana, 8: 18151 (R:US)
Regulations
Guidebook to water-source heat pumps, 8: 18141 (R:US)
Technology Assessment
Guidebook to water-source heat pumps, 8: 18141 (R:US)
WATER WELLS
Water Chemistry
Geothermal investigations in the Camas area, Washington, 1979, 8: 17697 (RA:US)
WATERBORNE PARTICLES
See PARTICULATES
WATERFLOODING
Economic Analysis
Evaluation of the North Stanley Polymer Demonstration Project (Tertiary oil recovery; polymer-enhanced waterflooding; Oklahoma), 8: 17212 (R:US)
Feasibility Studies
Evaluation of the North Stanley Polymer Demonstration Project (Tertiary oil recovery; polymer-enhanced waterflooding; Oklahoma), 8: 17212 (R:US)
WATERWALL FURNACES
See WATERWALL INCINERATORS
WATERWALL INCINERATORS
Cogeneration
Feasibility case study concerning refuse-burning modular incineration with cogeneration in Chicago. Energy management memorandum TM-82-3, 8: 18204 (R:US)
Feasibility Studies
Feasibility case study concerning refuse-burning modular incineration with cogeneration in Chicago. Energy management memorandum TM-82-3, 8: 18204 (R:US)
WAVEGUIDES
Engineering Drawings
Waveguide, waveguide valve, flanges and gaskets, directional coupler and accelerator (Engineering Materials) (Stanford 20-GeV linac), 8: 18511 (E:US)
Switches
Waveguide high-power switch (Engineering Materials), 8: 18503 (E:US)
WAZ 16
See NICKEL BASE ALLOYS
WEAK INTERACTIONS
Equivalence Principle
Development of a direct experimental test for any violation of the equivalence principle by the weak interaction. Final report, 8: 19096 (R:US)
WEAK NEUTRAL CURRENTS
P Invariance
Parity-violating weak neutral current effects in elastic e-^{12}C scattering. Progress report, March 1, 1982-December 31, 1982, 8: 19118 (R:US)
WEAPONS
See also NUCLEAR WEAPONS
Launching
Electromagnetic launchers: background and the MRL program, 8: 18575 (R:US)
Testing
Computer-based test system for the safing, arming, and fuzing system of the Tactical Airfield Attack Munition (TAAM), 8: 18470 (RA:US)
WEATHERIZATION
Manuals
House doctor's manual, 8: 18144 (R:US)
WECS
See WIND TURBINES
WEINBERG LEPTON MODEL
PCAC Theory
Introduction to the electroweak theory, 8: 19099 (R:DE)
Renormalization
Introduction to the electroweak theory, 8: 19099 (R:DE)
WEINBERG MODEL
See WEINBERG LEPTON MODEL
WEINBERG-SALAM GAUGE MODEL
Structure of semi-simple gauge groups for unified weak and electromagnetic interactions, 8: 19117 (J:US)
WELDED JOINTS
Aging
Aging response of a welded iron-based superalloy (JBK-75 (Fe-28 Ni-15 Cr-2 Ti-1 Mo)), 8: 18258 (R:US)
WELDING
See also LASER WELDING
Equipment
Manual tube-to-tubesheet welding torch (Patent), 8: 18274 (P:US)
WELDING MACHINES
Design
Laser weld jig (Patent), 8: 18273 (P:US)
WELDS
See WELDED JOINTS
WELL COMPLETION
Research Programs
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Technology Transfer
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
WELL DRILLING
Environmental Impacts
Possible effects of drilling operations in Section 6D, Naval Petroleum Reserve No. 2, Kern County, California on the endangered San Joaquin kit fox, blunt-nosed leopard lizard, and other sensitive species, 8: 17234 (R:US)
Lost Circulation
Static slot testing of conventional lost circulation materials, 8: 17719 (R:US)
Research Programs
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
Technology Transfer
Geo energy research and development: technology transfer update, 8: 17164 (R:US)
WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Design
Magnetic resonance apparatus (Patent), 8: 17208 (P:US)
WELLMAN-GALUSHA PROCESS
Demonstration Plants
Use of low-Btu gas in iron ore pelletizing, 8: 17070 (J:US)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WEST VIRGINIA
Black Shales
Bedding-orientation contours of Middle Devonian shales exposed in the Middle Mountain syncline, Valley and Ridge province, West Virginia, 8: 17258 (R:US)
Geology
Bedding-orientation contours of Middle Devonian shales exposed in the Middle Mountain syncline, Valley and Ridge province, West Virginia, 8: 17258 (R:US)
Natural Gas Deposits
Bedding-orientation contours of Middle Devonian shales exposed in the Middle Mountain syncline, Valley and Ridge province, West Virginia, 8: 17258 (R:US)
Water Quality
Stream water quality in the coal region of West Virginia and Maryland. General technical report (final), 8: 17130 (R:US)
WESTERN AREA POWER ADMINISTRATION
Audits
Report on management issues in the Western Area Power Administration, 8: 18080 (R:US)

Management
Report on management issues in the Western Area Power Administration, 8: 18080 (R:US)
Power Systems
Cost saving and safety issues in the Billings Area of the Western Area Power Administration, 8: 18079 (R:US)
WESTERN REGION
See FEDERAL REGION IX
WESTINGHOUSE GASIFICATION PROCESS
Functional Models
Advanced development of a pressurized ash agglomerating fluidized-bed coal gasification system. Quarterly progress report, January 16-March 31, 1982, 8: 17028 (R:US)
Process Development Units
Advanced development of a pressurized ash agglomerating fluidized-bed coal gasification system. Quarterly progress report, January 16-March 31, 1982, 8: 17028 (R:US)
WET DEPOSITION
See WASHOUT
WETLANDS
Management
Classification and management of wetlands in the Western Kentucky coal field. Research report, 8: 17126 (R:US)
WET-TYPE COOLING TOWERS
See COOLING TOWERS
WILD ANIMALS
A guide for enhancement of fish and wildlife on abandoned mine lands in the eastern United States. Final report, 8: 17125 (R:US)
Body Burden
Animal investigation program 1980 annual report: Nevada Test Site and vicinity, 8: 18723 (R:US)
Management
Wildlife: user guide for mining and reclamation. Forest service general technical report, 8: 18735 (R:US)
Production
Management of cooling ponds and lakes for fish and wildlife - a guidance manual. Final report, 8: 17778 (R:US)
WIND
See also TORNADOES
Availability
Small wind power in the southwestern United States, 8: 17734 (R:US)
Calculation Methods
Method for estimating wind characteristics at potential wind-energy-conversion sites, 8: 17742 (R:US)
Data Analysis
Method for estimating wind characteristics at potential wind-energy-conversion sites, 8: 17742 (R:US)
Monitoring
Project Ahupua'a: solar meteorological field measurements on the Island of Hawaii, Summer 1978. 5. Southern flank of Mauna Loa, 8: 17746 (R:US)
Velocity
Method for estimating wind characteristics at potential wind-energy-conversion sites, 8: 17742 (R:US)
Spatially averaging cross-wind sensors and numerical-model results for nocturnal drainage winds in complex terrain, 8: 18597 (R:US)
WIND ENERGY CONVERSION SYSTEMS

WIND TURBINES
WIND POWER
Resource Assessment
Small wind power in the southwestern United States, 8: 17734 (R:US)
WIND POWER PLANTS
Economics
Public policy incentives for electric utility fuel conservation investments: a case study for wind power, 8: 17731 (R:US)
Planning
Project status report No. 4, 8: 18113 (R:US)
Technology Assessment
Public policy incentives for electric utility fuel conservation investments: a case study for wind power, 8: 17731 (R:US)
WIND TURBINES
See also VERTICAL AXIS TURBINES
Control Systems
A pitch control system for large scale wind turbines, 8: 17739 (R:SE)
Drag
Measurements of wake interaction effects on the power output from small wind turbine models, 8: 17737 (R:SE)
Environmental Impacts
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Performance Testing
Wind machine propellers - study of prototypes in steady state regime - non-steady state aspects (helices eoliennes - etude de prototypes en regime stationnaire - aspects instationnaires), 8: 17741 (R:US)
Wind-turbine performance assessment. Technology status report No. 5, 8: 17736 (R:US)
Research Programs
DOE/NASA Lewis large-wind-turbine program, 8: 17735 (R:US)
Technical and management support for the development of small wind systems. Fiscal year 1981 annual report, October 1, 1980-September 30, 1981, 8: 17744 (R:US)
Wind-turbine performance assessment. Technology status report No. 5, 8: 17736 (R:US)
Risk Assessment
Side effects of renewable energy sources. Revised edition, 8: 18803 (R:US)
Technology Assessment
Appropriate energy technology, 8: 17740 (RA:US)
Testing
North Wind 2-kW high-reliability wind system. Phase II: fabrication and test, 8: 17745 (R:US)
Towers
Design and construction of a folding 60-ft self-supporting tower system, 8: 17733 (R:US)
Turbulence
Measurements of wake interaction effects on the power output from small wind turbine models, 8: 17737 (R:SE)
WINDOWS
Aerodynamics
Vacuum chamber with a supersonic flow aerodynamic window (Patent), 8: 18466 (P:US)
Heat Gain
Windows for accepting or rejecting solar-heat gain. Final report, 8: 17667 (R:US)
Shading
Windows for accepting or rejecting solar-heat gain. Final report, 8: 17667 (R:US)
WINE
See BEVERAGES
WINKLER PROCESS
Pilot Plants
Synthesis gas made from coal by High-Temperature-Winkler-Process, 8: 17013 (RA:DE)
WIRE SPARK CHAMBERS
Glow Discharges
Wire-chamber radiation detector with discharge control, 8: 18546 (P:US)
Readout Systems
Wire-chamber radiation detector with discharge control, 8: 18546 (P:US)
WOLFRAM
See TUNGSTEN
WOMEN
Blast Effects
Damage functions for upgraded shelters. Final report 15 Sep 80-20 Aug 81, 8: 19397 (R:US)
WOOD
Availability
Predicted weights and volumes of firewood in hardwood trees in the southeast. Forest service research paper, 8: 17575 (R:US)
Trends in economic scarcity of U.S. timber commodities. Forest Service Resource Bulletin, 8: 18025 (R:US)

Carbonization
Wood carbonization, 8: 17550 (RA:DE:In German)
Combustion
Effects of geometry on flash thermal damage, 8: 18566 (R:US)
Flash Hydropyrolysis Process
Flash pyrolysis of biomass with reactive and nonreactive gases, 8: 17541 (R:US)
Gasification
Flash pyrolysis of biomass with reactive and nonreactive gases, 8: 17541 (R:US)
Kinetic studies of wood gasification. Final report Jan 81-Apr 82, 8: 17491 (R:US)
Manufacture of synthetic gas by gasification of wood by the Rheinbraun HT Winkler process, 8: 17560 (RA:DE:In German)
SNG from land-based biomass 1981 program. Final report Jul-Dec 81, 8: 17492 (R:US)
Ignition
Effects of geometry on flash thermal damage, 8: 18566 (R:US)
Pyrolysis
Flash pyrolysis of biomass with reactive and nonreactive gases, 8: 17541 (R:US)
Wood carbonization, 8: 17550 (RA:DE:In German)
Storage
Storage of fuelwood chips in fraction 25-30 mm., 8: 17518 (R:US)
Uses
Wood products use in coal mining. Open file report 21 Apr 80-1 Apr 82, 8: 17159 (R:US)

WOOD ALCOHOL
See METHANOL

WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Fuel Consumption
Estimating production rates and operating costs of timber harvesting equipment in the northern Rockies. General technical report, 8: 18119 (R:US)

WOOD WASTES
Gasification
Heat and electricity from homogeneous waste, 8: 17554 (RA:DE:In German)
Saarberg district heating process, 8: 17558 (RA:DE:In German)
Inventories
Handbook for inventorying surface fuels and biomass in the interior West. General technical report, 8: 17578 (R:US)
Pyrolysis
Kiener low temperature pyrolysis system to obtain charcoal and energy from wood waste and biomass, 8: 17548 (RA:DE:In German)

WOOD-FUEL POWER PLANTS
Feasibility Studies
Advanced bio-energy systems for Air Force installations. Final report Feb 80-Jan 81, 8: 17747 (R:US)

WORKERS

ZINC 64
Nuclear Radii
Charge distribution in the ^{64}Zn nucleus with accounting for deformation, 8: 19161 (RA:SU:In Russian)
ZINC 65
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

Root Absorption
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)
Uptake
Study of various aspects of the effects of radiation on living cells making use of plant cells and related material. Behaviour of radiocontaminants in soils and vegetations of specific sites, 8: 18876 (BA:XE)

ZINC COMPOUNDS
See also ZINC SULFATES
Photolysis
Actinometry in monochromatic flash photolysis: the extinction coefficient of triplet benzophenone and quantum yield of triplet zinc tetraphenyl porphyrin, 8: 18360 (R:US)

ZINC IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s²3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)

ZINC SULFATES
Decomposition
Solar-thermal decomposition of zinc sulfate, 8: 17644 (R:US)
Pyrolysis
Solar-thermal decomposition of zinc sulfate, 8: 17644 (R:US)

ZINC-BROMINE BATTERIES
Design
Development of a circulating zinc-bromine battery. Phase I. Final report, 8: 17980 (R:US)
Testing
Development of a circulating zinc-bromine battery. Phase I. Final report, 8: 17980 (R:US)

ZINC-MANGANESE BATTERIES
Battery Separators
Development of improved separators for alkaline zinc batteries, 8: 17978 (R:US)

ZIRCALOY 4
Physical Radiation Effects
BR-3 high burnup fuel rod hot cell program. Volume 1, 8: 17814 (R:US)

ZIRCONIUM
Degassing
Helium release from tritium occluders in Zetatron tubes, 8: 18498 (R:US)
Emission Spectroscopy
Spectrographic determination of trace elements in basaltic rocks, 8: 18307 (R:IN)
Neutron Reactions
Fast-neutron scattering cross sections of elemental zirconium, 8: 19167 (R:US)
Proton Transport
Stopping powers of Zr, Pd, Cd, In and Pb for 6.5 MeV protons and mean excitation energies, 8: 19208 (RA:US)
Total Cross Sections
Fast-neutron scattering cross sections of elemental zirconium, 8: 19167 (R:US)

ZIRCONIUM 95
Radioecological Concentration
Radioactive materials released from nuclear power plants. Annual report, 1980, 8: 18696 (R:US)

ZIRCONIUM HYDRIDES
Neutron Reactions
Derivation of the generalized frequency spectra of moderator atom oscillation from experimental double differential scattering cross section of slow neutrons, 8: 19235 (RA:SU:In Russian)

ZIRCONIUM IONS
Energy-Level Transitions
Magnetic dipole lines in the 3s²3p/sup x/ configuration of elements from copper to molybdenum, 8: 19298 (R:US)

ZIRCONIUM OXIDES
Microstructure
Microstructure control for sputter-deposited ZrO_2, ZrO_2.CaO and ZrO_2.Y_2O_3, 8: 18285 (J:CH)
Sprayed Coatings
Microstructure control for sputter-deposited ZrO_2, ZrO_2.CaO and ZrO_2.Y_2O_3, 8: 18285 (J:CH)

ZT-40 DEVICES
Impurities
Nonthermal ultrasoft x-ray spectra on ZT-40M, 8: 19292 (R:US)
X-Ray Spectra
Nonthermal ultrasoft x-ray spectra on ZT-40M, 8: 19292 (R:US)

ZYMOMONAS MOBILIS
Immobilized Cells
Fixed-film columnar bioreactors for the production of chemicals and fuels from biomass, 8: 17511 (RA:US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AB18-80FC10120	**North Dakota Univ., Grand Forks (USA). Engineering Experiment Station**	
	8:17122	DOE/FC/10120—T8
AC01-76ET10137	**Texaco, Inc., Montebello, CA (USA). Montebello Research Lab.**	
	8:17021	DOE/ET/10137—T7
AC01-76ET10348	**Curtiss-Wright Corp., Wood-Ridge, NJ (USA). Power Systems Div.**	
	8:17750	CW-WR—76-020.106A

REPORT NUMBER INDEX

The numbers assigned to all reports cited in the publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001, appears in column 3. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only.

Abbreviations Used in Availability Column

EM Available in aperture card format only. Inquiries regarding the availability of these items should be addressed to USDOE-TIC, P.O. Box 62, Oak Ridge, Tennessee, 37830.

ETEC Available *only to requesters within the United States* from the Energy Technology Engineering Center, P.O. Box 1449, Canoga Park, California 91304.

GJO Available from DOE Grand Junction Office, P.O. Box 2567, Grand Junction, Colorado 81501.

GPO For sale by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

HMSO Her Majesty's Stationery Office, Atlantic House, Holborn Viaduct, London, England, EC1P 1BN.

NSO Available *only to requesters within the United States* from the Nuclear Standards Office, Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37830.

NTIS For sale by the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, Virginia 22161. Price given is the domestic price for paper copy; prices for foreign purchasers are in most instances twice the domestic price.

TIC Available from the Technical Information Center, P.O. Box 62, Oak Ridge, Tennessee 37830.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE

Springfield, Virginia 22161

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

DOCUMENT TYPES

J	Journal article
TJ	Translation of a journal article
R	Report
RA	Report analytic
B	Book
BA	Book analytic
P	Patent
E	Engineering materials
D	Thesis or dissertation
TG	Translation (general)
TA	Translation (analytic)

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

Most reports abstracted in this publication may be obtained from

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, VA 22161

or

DOE Technical Information Center (TIC)
P. O. Box 62
Oak Ridge, TN 37830
ATTN: Customer Services Division

Note: DOE offices and contractors should order from TIC; all others should order from NTIS. For more specific information on ordering, please note the introductory paragraph to the Report Number Index. For assistance in obtaining reports that do not have an Order No. (DE...) or other availability indicated in the citation or Report Number Index, contact TIC.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications, e.g., A 293,415, are available from NTIS.

NON-REPORT DOCUMENTS

Check the citation closely for the availability of such documents as journal articles, conference papers, books, and monographs. It may be necessary to request directly from the publisher or originator or to contact local, state, or university libraries or commercial reprint services.

Dissertations are available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI. Please request by Order No., e.g., DA82-11997.

OTHER

When GPO is cited as available source, order from Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

REPORT COLLECTIONS

The libraries listed below purchase and maintain microfiche collections of DOE and foreign reports. Most of these libraries have microfiche reader-printers or other photocopy facilities with which to reproduce enlarged copies from microfiche. Charges for reproduction services vary.
